

Supplementary File S2

A. The time course of the ERPs preceding the response

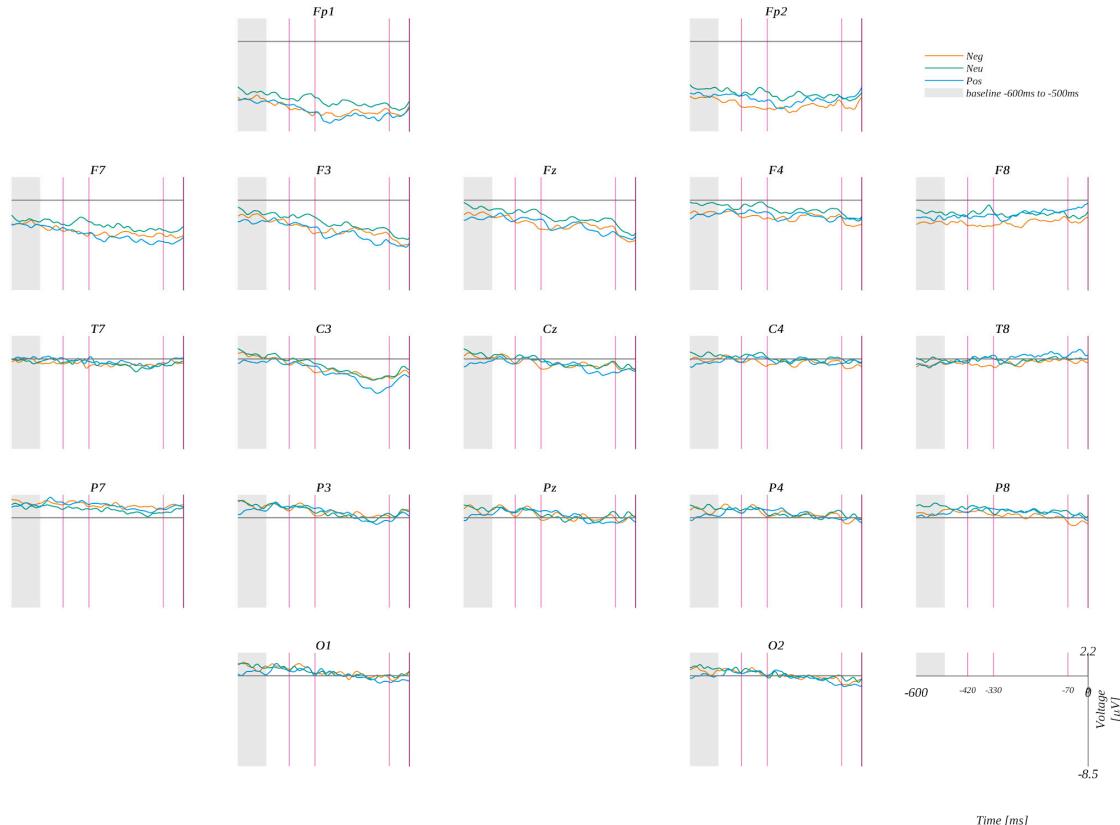

Figure S1. The time course of the ERP preceding the response (at time 0), for each level of valence, averaged across subjects without baseline correction. Gray rectangles indicate the time range selected for baseline corrections in the corresponding analysis.

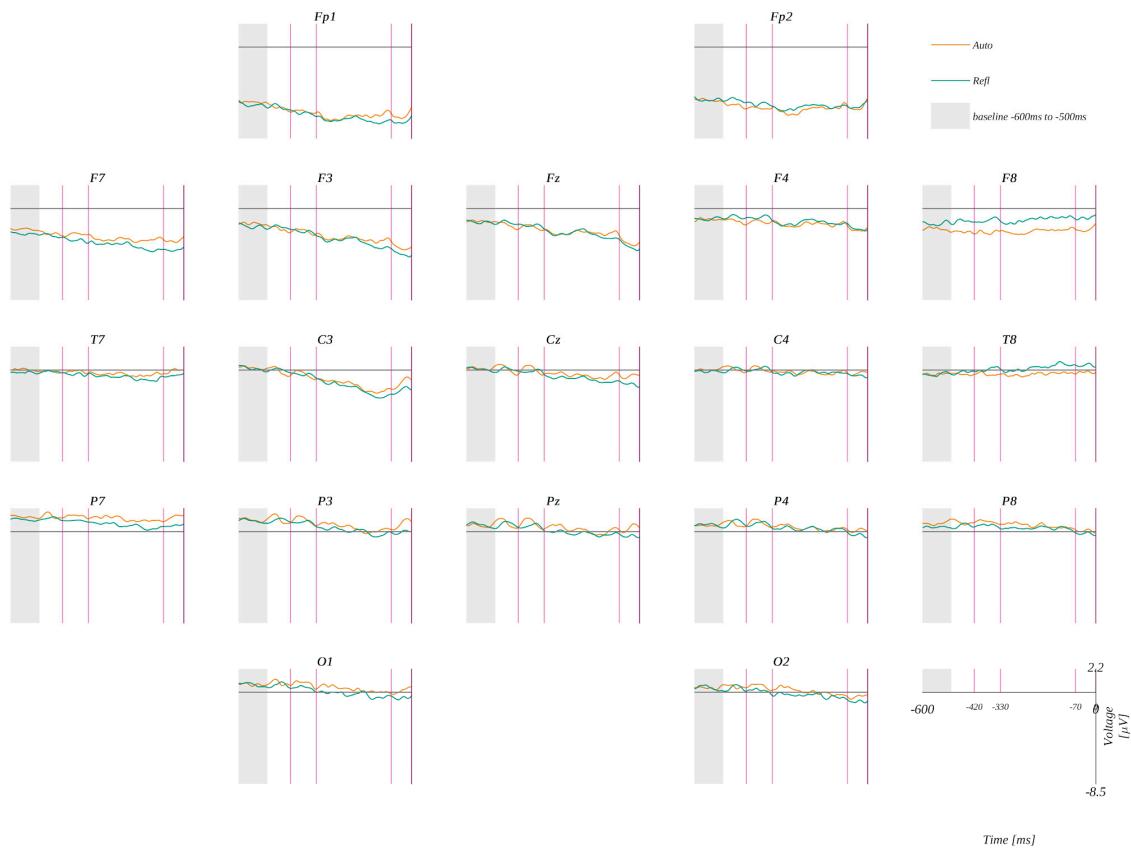

Figure S2. The time course of the ERP preceding the response (at time 0), for each level of origin, averaged across subjects without baseline correction. Gray rectangles indicate the time range selected for baseline corrections in the corresponding analysis.

B: Word reading and remembering task. ANOVA Table for the first level of analysis.

Time window: 60–145 ms

Effect	DFn	DFd	F	p
valence	2	54	1.36	0.266
origin	1	27	1.95	0.174
ROI	3	81	36.79	0.000

valence:ROI	16	400	2.18	0.005
question:ROI	8	200	0.60	0.777
origin:ROI	8	200	1.55	0.144
valence:origin:question	2	50	0.83	0.440
valence:question:ROI	16	400	1.64	0.056
valence:origin:ROI	16	400	1.54	0.084
origin:question:ROI	8	200	1.14	0.337
valence:origin:question:ROI	16	400	0.74	0.752

For the valence:ROI interaction Mauchly's test indicated that the assumption of sphericity had been violated ($\chi^2(87) = 0.001$ $p < .001$), therefore, degrees of freedom were corrected using Greenhouse-Geisser estimates of sphericity ($\epsilon = .243$), and the $\text{Pr}(>F[\text{GG}])=0.078$. Therefore this effect is not significant.

Time window: -330 ms to -70 ms
