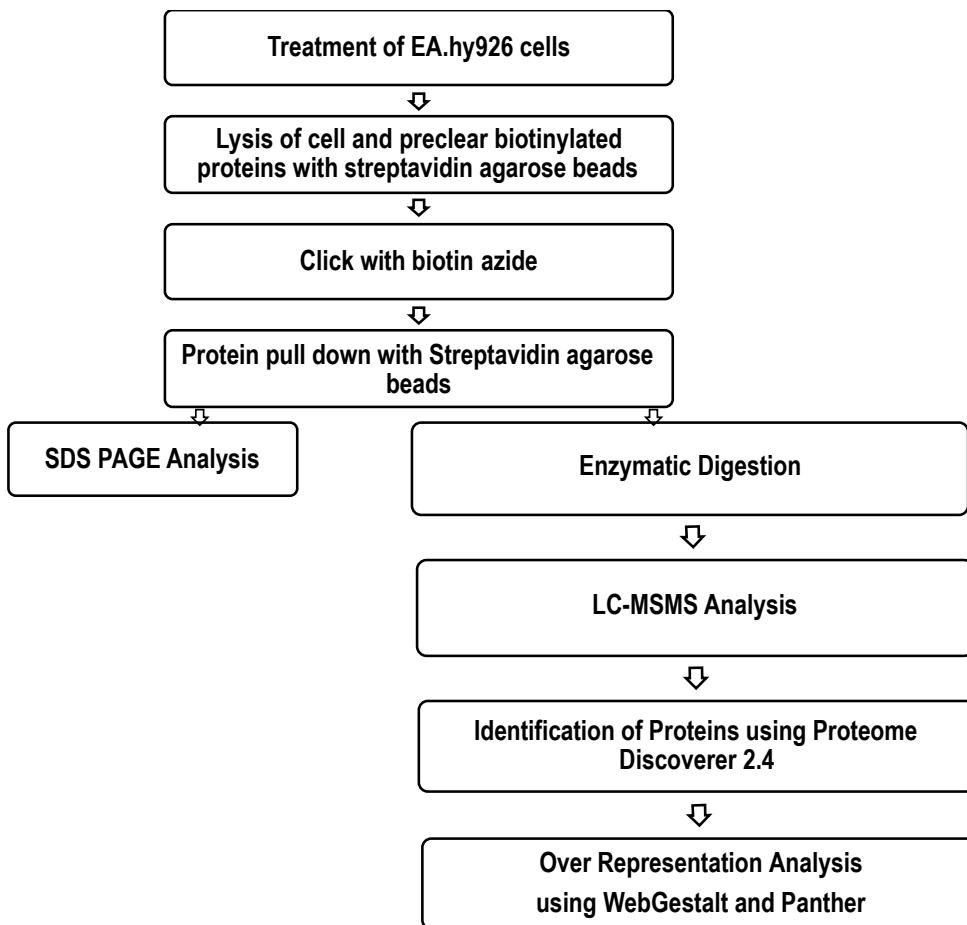

Figure S1. Schematic of workflow applied to identify the proteins modified by 2-ClHDyA. EA.hy926 cells were treated with DMSO, 10 µM HDyA or 10 µM ClHDyA for 1 h. Cells were lysed, clicked with azide-PEG3-biotin and incubated with streptavidin agarose beads. Streptavidin purified proteins were either used for SDS PAGE analysis or on-bead digestion. The digested peptides were subjected to LC-MS/MS and peptides were analyzed using Proteome Discoverer 2.4 software. The WebGestalt tool was used to perform Over representation analysis.
