¹Values obtained in a previous work (Muñoz-Tebar et al. [12])

²Not significant differences from 200 to 450 nm.

^{a-c} Different superscripts between row means significant differences ($p < 0.05$) due to EO concentration.

^{A-B} Different superscripts between columns means significant differences ($p < 0.05$) due to the essential oils used in the film formulation.

Data without any superscripts means that there were no significant differences ($p > 0.05$) either by EO concentration effect (indicated with lower case letters) or by the EO used in the formulation (indicated with capital letters).
