Table S1. PICOS-table on in- and exclusion criteria.

Parameter	Inclusion criteria	Exclusion criteria
Patients	Humane, adult (18 years or older) population	Animal or cadaveric trials, or >50% of the included population underwent emergent or reoperation CABG
Intervention	CABG with a sutureless device for the coronary anastomosis	
Control	CABG with a conventional hand-sewn coronary anastomosis	
Outcomes		
Study design	Controlled clinical trial MREC approved the trial	

Abbreviations: CABG, coronary artery bypass grafting ; MREC, medical research ethics committee.

Table S2. Newcastle-Ottawa quality assessment for cohort studies.

Study	Selection			Outcome of interest not present at the start of the study	Comparability		Outcome		Total (8/8)
	Representative of the intervention group	Selection of the control group	Ascertainment of exposure		Comparability of cohorts on the basis of design, or analysis controlled for confounders	Assessment of outcomes	Sufficient follow-up time ^a	Adequacy of follow-up

a. Cut-off on a minimum 30-day follow-up.

Table S3. Study design.

Study	Device	Study type	Outcome retrieval	Randomization	Inclusion	Exclusion
Eckstein 2002	St Jude DAD	NRCT	Not blinded	Not randomized	First-time CABG with at least 1 anastomosis vein-coronary, coronary OD < 3mm and ID < 2.5mm, vein graft ID < 3.5mm.	-
Wiklund 2005	St Jude DAD	RCT	Not blinded	Randomized	Coronary OD > 2.5mm, coronary ID > 2.0mm, vein graft ID > 3.5mm.	Emergency procedures, reoperation CABG, recent neurologic events, significant comorbidities, LVEF < 25%, pregnancy or nursing, requirement of chronic anticoagulation other than acetylsalicylic acid .
Klima 2003	MVP	NRCT	Not blinded	Not randomized	Multivessel CAD, target coronary artery stenosis ≥ 80%, free of plaque or calcification at the target site, coronary ID > 2mm.	LVEF < 30%, contraindication to aspirin or clopidogrel, emergent CABG, redo CABG requiring additional noncoronary procedures.
Vicol 2006	MVP	NRCT	Not blinded	Not randomized	Target coronary artery with high-grade stenosis, coronary ID > 1.5mm, no atherosclerotic plaque at the target site.	Contraindication for antiplatelet therapy, in whom MRI is planned, patients who refuse implantation.
Kim 2004	AADD	NRCT	Not blinded	Not randomized	-	Failure of graft flaring onto the implant pins, small and diseased coronary target, conversion to CPB.
Klima 2005	CAC	NRCT	Not blinded	Not randomized	-	Severely sclerotic and calcified coronaries, tandem stenoses, too small or fragile-appearing vessels, vessels with inadequate flow distribution area, intramuscular segments, multiple-stented targets.
Boening 2005	CAC	NRCT	Not blinded	Not randomized	Between 35 and 80 years of age, informed consent agrees to follow-up evaluation, no known contraindications for CAG, candidate for isolated CABG via median sternotomy and scheduled for at least one non-lad saphenous vein bypass graft, target coronary artery stenosis > 50% per CAG, vein graft ID 3.0 - 4.0mm and free of distal ligating clips or suture ligatures and sufficient length to cut off the connector in case of conversion, coronary ID > 2mm, proximal aortic anastomosis on connector-graft is hand-sewn and provides solely flow to the connector graft.	No informed consent, participating in other clinical investigation to device or drug, history of cerebrovascular disease, renal insufficiency (creat < 3.0mg/dl or dialysis daily), LVEF < 25%, history of malignant ventricular tachyarrhythmia, sustained VT or VF leading to cardiac arrest, contraindication to antiplatelet therapy that includes aspirin and clopidogrel, patient has had previous cardiac surgery, pregnant or nursing, HIV positive or hepatic failure, hemodynamic instability that requires inotropic support or a mechanical assist device, allergy to nickel, coronary target is severely calcified or contains soft atheroma anteriorly within 2mm proximally from the heel and 4mm distally from the toe, connector-graft is a Y-graft, connector graft is a sequential graft.

Table S3. Study design, continued.

Study	Device	Study type	Outcome retrieval	Randomization	Inclusion	Exclusion
Cai 2007	C-port	NRCT (historical control)	Not blinded	Not randomized	-	Poor vein grafts, severely diseased and small coronary targets < 1mm, any emergent procedures, need for IABP, any bleeding diathesis.
Verberkmoes 2012	C-port	RCT	Single blinded (participants)	Randomized	Informed consent, > 17 years of age, willing and able to have follow-up visits and examinations, EuroSCORE < 2, at least 2VD, target vessel free from severe calcifications, coronary target ID > 1.25mm and single wall thickness < 0.75mm, donor graft of suitable quality and single wall thickness < 0.75mm	Emergency procedures, unable to meet study requirements, participation in other clinical trial, pregnancy, not a standard CABG or concomitant valve surgery, history of any cardiac surgery other than PTCA and stent placement, history of IABP within the last 30 days, congestive heart failure or NYHA IV in the last 30 days, history of bleeding disorder or thromboembolic disease requiring anticoagulation therapy, hemodynamical instability, history or acute or chronic dialysis, creat > 200 mmol/ml in the last 30 days, documented or suspected acute systemic infection, need for immunosuppressive therapy, CVA within the last 2 weeks, allergy or other contraindication for aspirin or other anticoagulants
Balkhy 2018	C-port	NRCT (historical control)	Not blinded	Not randomized	Patients receiving at least 1 C-port in routine CABG, informed consent, able to make follow-up appointments and examinations, age < 80, LVEF > 30%, life expectancy > 1 year.	Participation in other conflicting clinical trials, unable to meet study requirements, pregnancy, preoperative IABP, bleeding disorder or thromboembolic disease requiring anticoagulants, NYHA IV, contraindication to Aspirin, previous CABG.
Cheng 2021	U-clip	NRCT	Not blinded	Not randomized	Single LAD-disease, single RCA-disease, multiple vessel CAD with involvement of LAD and possibility to PCI the non-LAD lesions.	History of left lung trauma or surgery, LVEF < 30%, requirement of emergency CABG, presence of severe COPD with inability of single-lung ventilation.

Abbreviations: St. Jude DAD, St. Jude distal anastomotic device ; NRCT, non-randomized controlled trial ; CABG, coronary artery bypass grafting ; OD, outer diameter ; ID, inner diameter ; RCT, randomized controlled trial ; LVEF, left ventricular ejection fraction ; MVP, magnetic vascular positioner ; CAD, coronary artery disease ; MRI, magnetic resonance imaging ; AADD, automated anastomotic distal device ; CPB, cardiopulmonary bypass ; CAC, coronary anastomotic coupler ; CAG, coronary angiography ; VT, ventricular tachycardia ; VF, ventricular fibrillation ; HIV, human immunodeficiency virus ; IABP, intra-aortic balloon pump ; PTCA, percutaneous transluminal coronary angioplasty ; CVA, cerebrovascular event ; LAD, left anterior descending coronary artery ; RCA, right coronary artery ; PCI, percutaneous coronary intervention ; COPD, chronic obstructive pulmonary disease. -, not described.
