Measurement Properties of the Dutch Multifactor Fatigue Scale in Early and Late Rehabilitation of Acquired Brain Injury in Denmark

Correlation matrices.....	1
Item descriptive statistics.....	4
Standardized factor loadings.....	9
Post hoc measurement invariance analyzes	12

Correlation matrices

Summary data (inter-item correlation matrices) of the full sample ($N = 149$) for subscales of the Dutch Multifactor Fatigue Scale (DMFS) are provided in Table S1–S5. Correlations were calculated using the polychoric correlation coefficient (using the *psych* package [47]), as appropriate for ordinal data.

Table S1. Impact of Fatigue: Inter-Item Correlations (Polychoric)

Item	1	6	13	20	22	24	26	29	33	35	38
1	1										
6	.58	1									
13	.59	.54	1								
20	.59	.46	.45	1							
22	.52	.55	.51	.47	1						
24	.14	.23	.17	.32	.23	1					
26	.58	.62	.55	.53	.60	.34	1				
29	.47	.59	.33	.47	.49	.10	.50	1			
33	.66	.66	.49	.55	.58	.31	.61	.52	1		
35	.39	.51	.44	.40	.49	.39	.52	.31	.63	1	
38	.53	.63	.46	.50	.57	.15	.66	.60	.74	.46	1

Table S2. Signs and Direct Consequences of Fatigue: Inter-Item Correlations (Polychoric)

Item	4	7	11	15	19	21	23	28	31
4	1								
7	.37	1							
11	.35	.27	1						
15	.46	.24	.40	1					
19	.13	.29	.25	.17	1				
21	.35	.47	.29	.35	.32	1			
23	.19	.31	.21	.27	.20	.34	1		
28	.27	.37	.14	.25	.30	.56	.32	1	
31	.40	.46	.48	.32	.40	.38	.30	.48	1

Table S3. Mental Fatigue: Inter-Item Correlations (Polychoric)

Item	3	10	17	27	32	34	37
3	1						
10	.25	1					
17	.31	.45	1				
27	.39	.41	.58	1			
32	.21	.39	.45	.65	1		
34	.34	.42	.52	.69	.51	1	
37	.46	.51	.59	.59	.42	.51	1

Table S4. Physical Fatigue: Inter-Item Correlations (Polychoric)

Item	5	9	14	18	25	30
5	1					
9	.70	1				
14	.31	.40	1			
18	.31	.31	.09	1		
25	.27	.27	.37	.18	1	
30	.40	.38	.50	.38	.40	1

Table S5. Coping with Fatigue: Inter-Item Correlations (Polychoric)

Item	2	8	12	16	36
2	1				
8	-.11	1			
12	.22	.05	1		
16	.02	.37	-.10	1	
36	.20	.40	.10	.36	1

Item descriptive statistics

Descriptive statistics for items on the subscales of DMFS in the full sample are provided in Table S6. Figure S1 shows the item response distribution on all items by rehabilitation setting (community-based vs. sub-acute). For each item, all response categories were observed in both groups. Figure S2 provides monotonicity plots in the full sample, i.e., relationships between each item and the corrected total score.

Table S6. Item Descriptive Statistics on Dutch Multifactor Fatigue Scale in Acquired Brain Injury

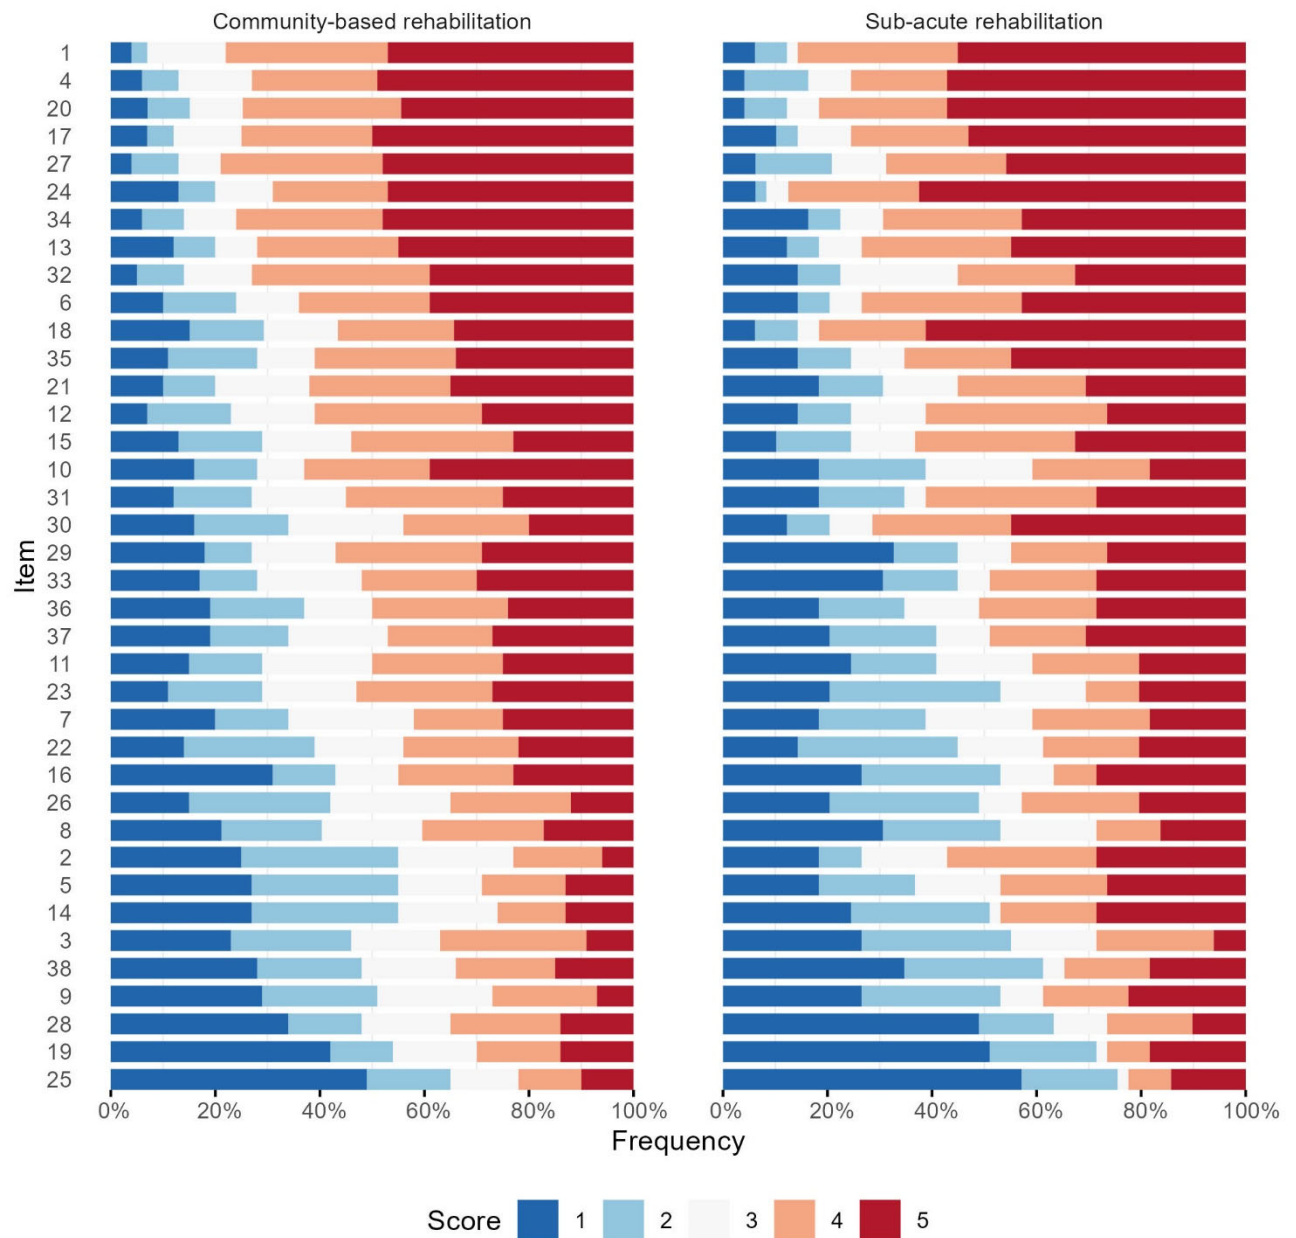

Item		Univariate statistics					Correlations	
no.	Content, abbreviated	<i>n</i>	<i>M</i>	<i>SD</i>	Floor, %	Ceiling, %	Inter-item, range <i>r_{pc}</i>	Item-total, <i>r_{ps}</i>
Impact of Fatigue								
1	Often tired	149	4.17	1.08	4.7	49.7	.14 to .66	.74
6	Do what I want	149	3.73	1.39	11.4	40.3	.23 to .66	.77
13	Overcome	149	3.86	1.38	12.1	45.0	.17 to .59	.62
20	Tired every day	148	4.05	1.21	6.1	48.6	.32 to .59	.65
22 ^a	Easily get over	149	3.09	1.38	14.1	21.5	.23 to .60	.68
24 ^a	Don't need rest	148	4.00	1.35	10.8	52.0	.10 to .39	.27
26	Suffer	149	2.91	1.59	29.5	24.8	.34 to .66	.76
29	Serious problem	149	3.26	1.53	21.5	29.5	.10 to .60	.59
33	Affects life	149	3.26	1.53	22.8	28.2	.31 to .74	.81
35	Can't go further	149	3.61	1.42	12.1	37.6	.31 to .63	.60
38	Suffer terribly	149	2.68	1.47	30.2	16.1	.15 to .74	.73
Mean		-	3.51	1.39	-	-	.48	.66
Signs and Direct Consequences of Fatigue								
4	In the afternoon	149	4.06	1.21	5.4	51.7	.13 to .46	.50
7	Emotional issues	149	3.09	1.43	19.5	22.8	.24 to .47	.54
11 ^a	Recover easily	149	3.19	1.40	14.1	24.8	.14 to .48	.44
15	Others notice	149	3.44	1.35	12.1	26.2	.17 to .46	.46
19	Headache	149	2.40	1.53	45.0	15.4	.13 to .40	.40
21	React emotionally	149	3.57	1.38	12.8	33.6	.29 to .56	.58
23	Let thoughts go	149	3.19	1.42	18.1	23.5	.19 to .34	.40
28	Regret things said	149	2.53	1.48	38.9	12.8	.14 to .56	.51
31	Bother next day	149	3.40	1.48	16.8	32.2	.30 to .48	.62
Mean		-	3.21	1.41	-	-	.32	.49
Mental Fatigue								
3 ^a	Conversations	149	2.69	1.31	24.2	8.1	.21 to .46	.39
10	Thinking	149	3.40	1.39	14.1	26.2	.25 to .51	.51

Item		Univariate statistics					Correlations	
no.	Content, abbreviated	<i>n</i>	<i>M</i>	<i>SD</i>	Floor, %	Ceiling, %	Inter-item, range <i>r_{pc}</i>	Item-total, <i>r_{ps}</i>
17	Stimulation	149	4.05	1.25	8.1	51.0	.31 to .59	.66
27	Concentrating	148	4.03	1.19	4.7	47.3	.39 to .69	.78
32	Make mistakes	149	3.79	1.25	8.1	36.9	.21 to .65	.57
34	Complaints	149	3.94	1.31	9.4	46.3	.34 to .69	.67
37	Cannot think	149	3.20	1.50	19.5	28.2	.42 to .59	.67
Mean		-	3.59	1.31	-	-	.46	.61
Physical Fatigue								
5 ^a	Physically fit	149	2.79	1.36	22.8	13.4	.27 to .70	.56
9 ^a	Good condition	149	2.63	1.38	28.2	12.1	.27 to .70	.58
14 ^a	Wake up rested	149	2.71	1.46	26.2	18.1	.09 to .50	.45
18	Physical exertion	148	3.72	1.43	12.2	43.2	.09 to .38	.32
25	Body aches	149	2.13	1.44	51.7	11.4	.18 to .40	.40
30	Little energy	149	3.37	1.41	14.8	28.2	.38 to .50	.57
Mean		-	2.89	1.41	-	-	.35	.48
Coping with Fatigue								
2 ^a	Plan rest	149	2.79	1.43	24.2	17.4	-.11 to .22	.14
8	Get tired out	148	2.84	1.43	24.3	16.9	-.11 to .40	.30
12	Finish doings	149	3.56	1.29	9.4	28.2	-.10 to .22	.14
16 ^a	Avoid overtired	149	2.91	1.33	16.8	14.8	-.10 to .37	.28
36	Get overtired	149	3.21	1.47	18.8	25.5	.10 to .40	.47
Mean		-	3.06	1.39	-	-	.15	.27

Note. Analyses were conducted in the full sample ($N = 149$). r_{pc} = polychoric correlation coefficient. r_{ps} = polyserial correlation coefficient.

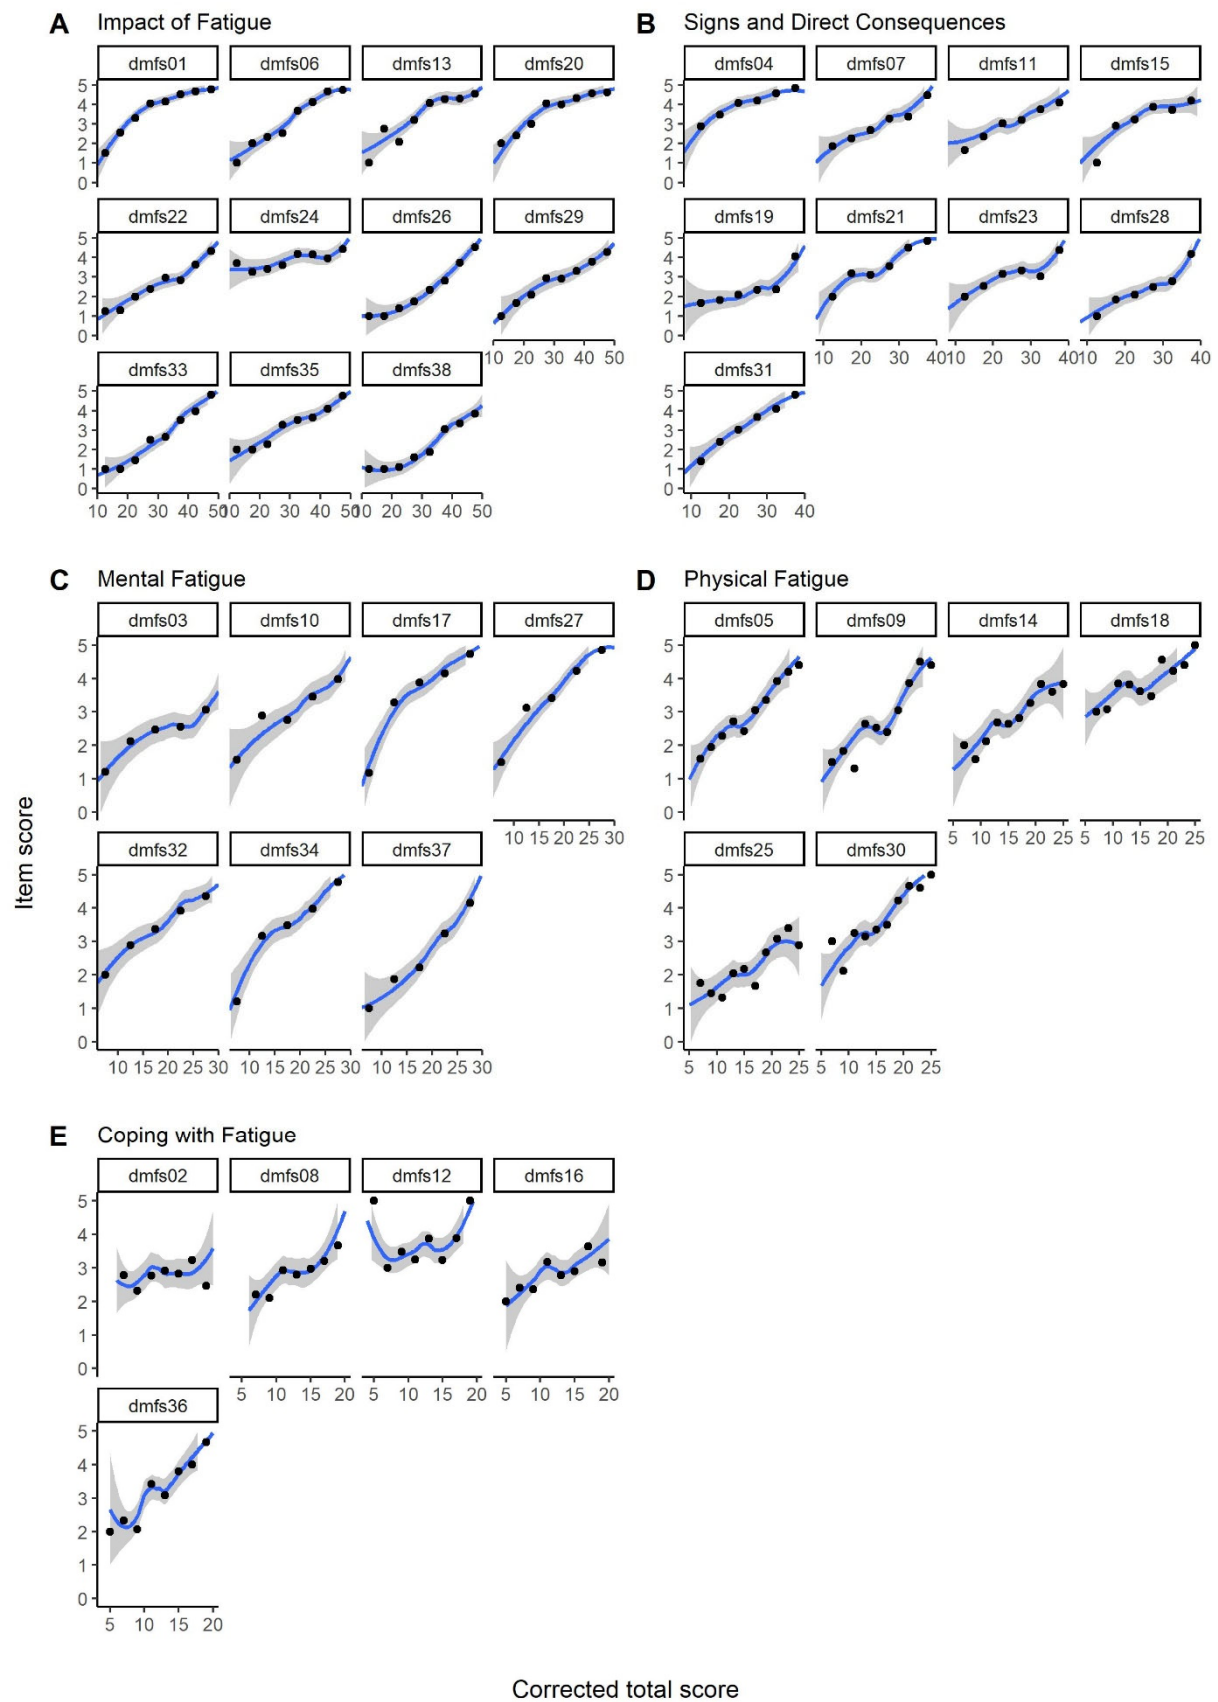

^a The item is reverse keyed, i.e. worded in positive terms, and was reverse coded prior to analyses.

Figure S1. Item Response Distribution on the Dutch Multifactor Fatigue Scale by Rehabilitation Setting

Note. Reverse keyed items, i.e. negatively worded items, were reverse coded prior to analysis.

Figure S2. Monotonicity Plots in the Full Sample

Note. The corrected total score (corrected for item overlap) was used as a proxy for the latent variable. Points represent binned means. Smooth curves were calculated using locally estimated scatterplot smoothing (loess). Grey areas display the 95% confidence interval.

Standardized factor loadings

Table S7 reports standardized factor loadings of measurement models in the full sample, and Table S8 reports standardized factor loadings of the multi-group factor models that were fitted in measurement invariance testing. Threshold estimates are not reported.

Note. Parameter estimates were derived from the final model in tests of measurement invariance (see Table 3).

* $p < .05$. ** $p < .01$. *** $p < .001$.

Post hoc measurement invariance analyzes

Eleven items included categories with only one or two observations (of which all cases were among inpatients). Analysis was rerun with these categories collapsed to examine effects of low frequency cells on the estimation of parameters. Collapsing categories resulted in slight changes in fit statistics without substantial interpretational consequences.
