

SP: single potential; SDP: short double potential; LDP: long double potential; FP: fractionated potential

Figure S1. Panel A: simultaneous endo-epicardial mapping procedure covering three sites at the RA (superior, middle and inferior). Panel B: color-coded activation map demonstrating a line of CB which are indicated by thick black lines. Panel C: various unipolar potential types. RA = right atrium; endo = endocardium; epi = epicardium; CB = conduction block; LAT = local activation time; SP = single potential; SDP = short double potential; LDP = long double potential; FP = fractionated potential.
