

## Supplementary Materials:

**Figure S1.** The barplots show the extent of variability explained by each attribute in the first three components (PCs 1-3).

**Table S1.** Percent of dehydrated leaves at 2017 (n=4). The evaluation was performed a week before harvest. The different letters indicate statistically significant differences ( $\alpha=0.05$ ) among the treatments for each variable, based on one-way ANOVA followed by post-hoc TukeyHSD test.
