EDA was added into 25 mL of methanol, and then MA was added dropwise into the solution under a nitrogen atmosphere. The reaction mixture was stirred at 4 °C for 30 min and an additional 24 h at room temperature. Methanol and excess MA were evaporated off using a rotary evaporator. Then the half generation (G0.5) PAMAM dendrimer was obtained. To prepare PAMAM G1, a certain amount of EDA was added dropwise to 25 mL of PAMAM G0.5 dendrimer solution in methanol under a nitrogen atmosphere, and the reaction mixture was stirred at 4 °C for 30 min and then at room temperature for 24 h. PAMAM G1 was obtained after removing methanol and the excess EDA by using the rotary evaporator at 55 °C. The steps for synthesizing high generation dendrimers are similar and the molar ratio of the reactants was summarized in Table S1.
