The preparation of deep eutectic solvent of choline chloride and arbidol

One kind of deep eutectic solvents was prepared by using choline chloride as hydrogen bond acceptor (HBA) and arbidol as hydrogen bond donor (HBD). The DES was prepared by simply mixing choline chloride (HBA) and arbidol (HBD) under stirring at room temperature, and then reacted at 120 °C for 30 min until a uniform and stable liquid was formed. The molar ratio of choline chloride to arbidol was 1:1.

The Equation (S1)

The ion/molecule fraction distribution was calculated by

$$\phi_{ions} = \frac{1}{[1 + 10^{(pKa - pH)}]} \quad (S1)$$

where ϕ_{ions} stands for ion fraction, the pKa of arbidol is 6.5.

Table. S1. The EDS element content of PS-CH₂Cl and the immobilized-HBA

Material type	Element	Content (%)
PS-CH ₂ Cl	C	72.77
	Cl	27.23
immobilized-HBA	C	58.24
	Cl	14.78
	N	8.83
	O	18.15

Table. S2. The melting point of choline chloride, arbidol and choline chloride-arbidol

Chemical	Melting point /°C
choline chloride	305.1
arbidol	134.8
Choline chloride-arbidol(1:1)	88.4

Table S3. The ionization degree of arbidol at different pH values

pH	φ_{ions}	pH	φ_{ions}
3	3.162×10^{-4}	6.5	0.50
4	3.152×10^{-3}	7	0.759
5	3.065×10^{-2}	8	0.969
5.5	9.090×10^{-2}	9	0.997
6.0	0.240		

Table S4. Kinetic parameters for the adsorption of arbidol by the immobilized-HBA at 20 °C and
pH=5.5

pseudo-first-order model			pseudo-second-order model		
$K_1(\text{min}^{-1})$	$q_e(\text{mg/g})$	R^2	$K_2(\text{g}/(\text{mg} \cdot \text{min}))$	$q_e(\text{mg/g})$	R^2
0.029	9.77	0.635	8.57×10^{-4}	145.8	0.994
