† These authors contributed equally to this work.

Keywords: lead-halide perovskites; microencapsulation; oil-in-fluorine emulsion; cell imaging.

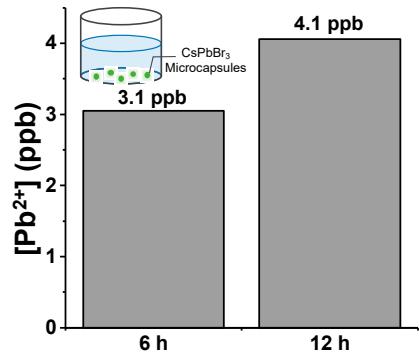

Figure S1. The leaked lead concentration after immersing the CsPbBr_3 microcapsules in deionized water for 6 h and 12 h. The inserted schematic illustration for lead leakage test.

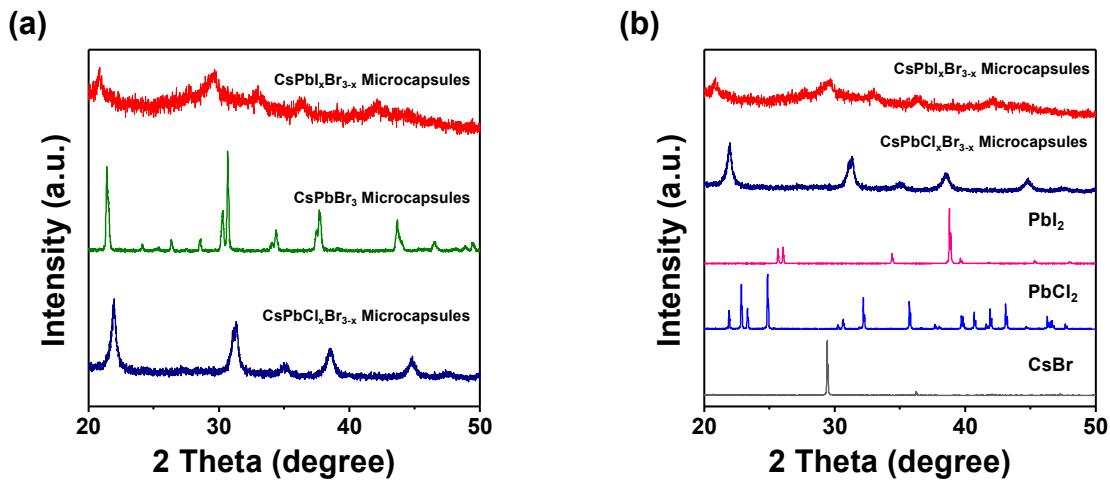

Figure S2. (a) XRD pattern for the $\text{CsPbI}_3\text{Br}_{3-x}$ microcapsules, CsPbBr_3 microcapsules and $\text{CsPbCl}_x\text{Br}_{3-x}$ microcapsules. As the halide ion was changed from Cl^- to Br^- and to I^- , the 2 theta angle shifts to a small angle direction. (b) XRD pattern for the $\text{CsPbI}_3\text{Br}_{3-x}$ microcapsules, $\text{CsPbCl}_x\text{Br}_{3-x}$ microcapsules, PbI_2 , PbCl_2 and CsBr .

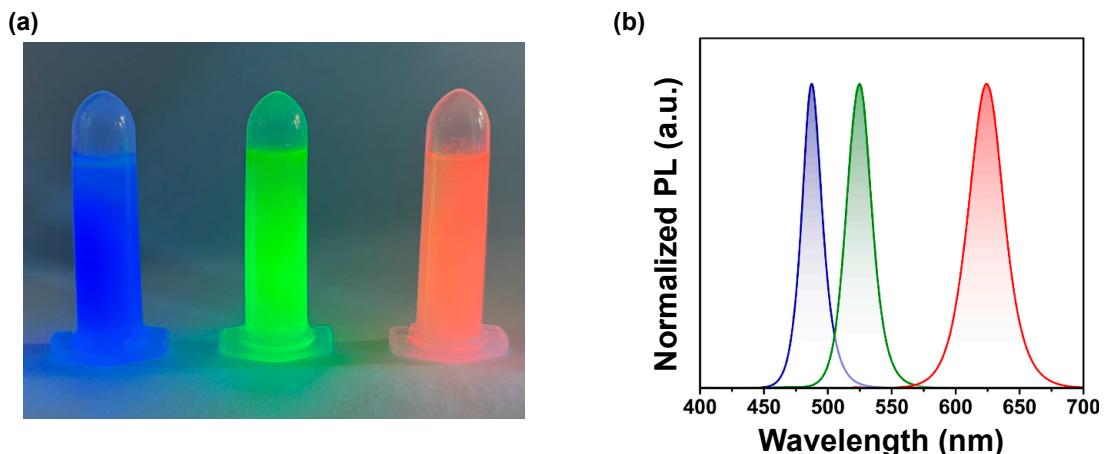

Figure S3. (a) Photograph and (b) PL emission spectra of LHP microcapsules with different emission

colors dispersed in PFO.

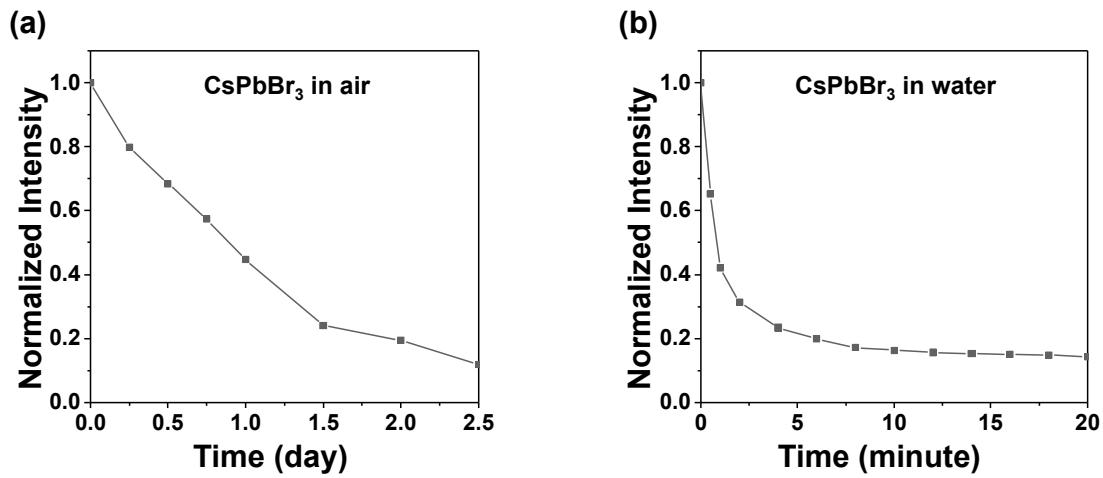

Figure S4. The relative fluorescence intensity of CsPbBr₃ as a function of time (a) in air and (b) in water.

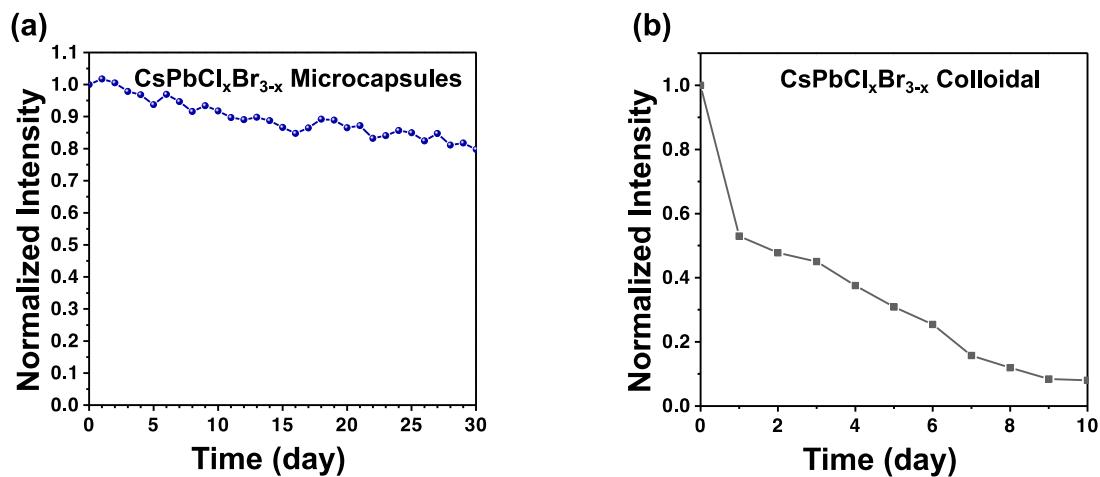

Figure S5 The relative fluorescence intensity of (a) CsPbCl_xBr_{3-x} microcapsules and (b) colloidal CsPbCl_xBr_{3-x} as a function of air exposure.

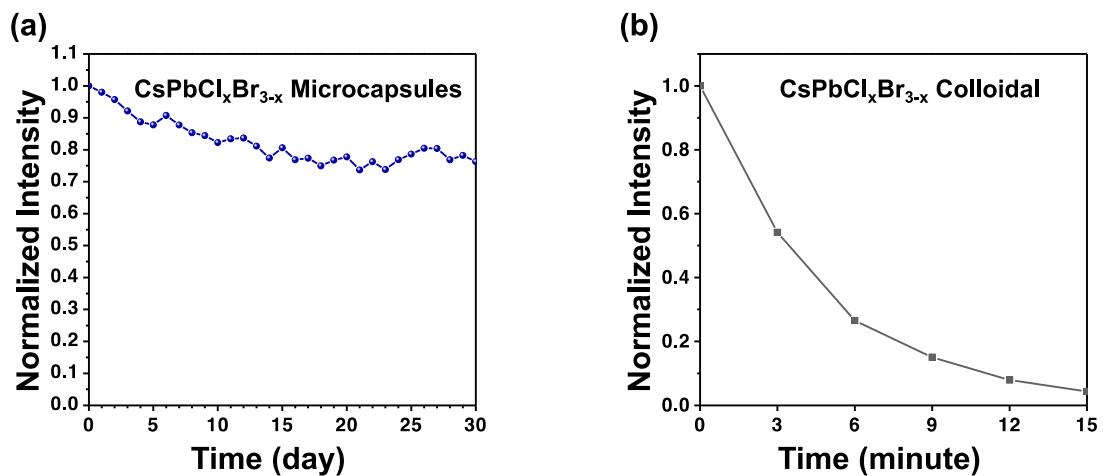

Figure S6. The relative fluorescence intensity of (a) $\text{CsPbI}_x\text{Br}_{3-x}$ microcapsules and (b) colloidal $\text{CsPbI}_x\text{Br}_{3-x}$ as a function of water exposure.

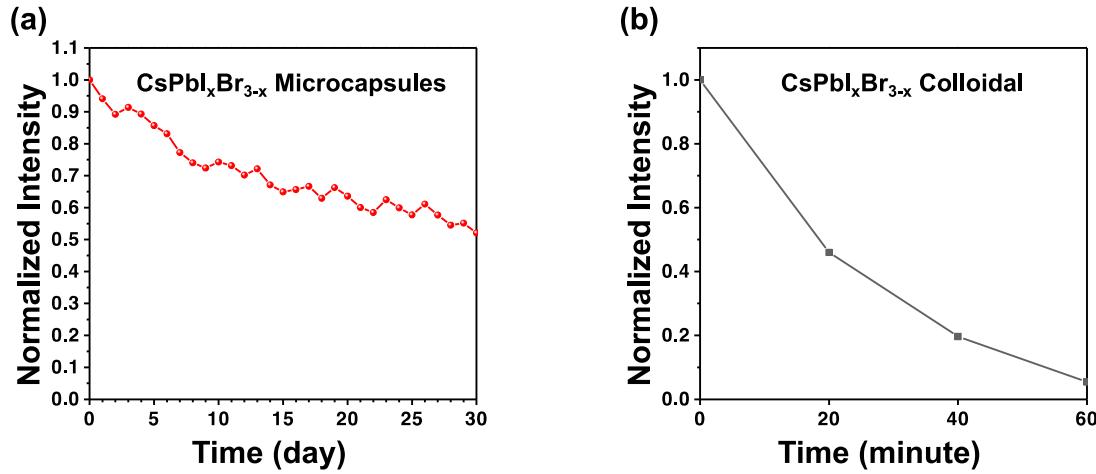

Figure S7. The relative fluorescence intensity of (a) $\text{CsPbI}_x\text{Br}_{3-x}$ microcapsules and (b) colloidal $\text{CsPbI}_x\text{Br}_{3-x}$ as a function of air exposure.

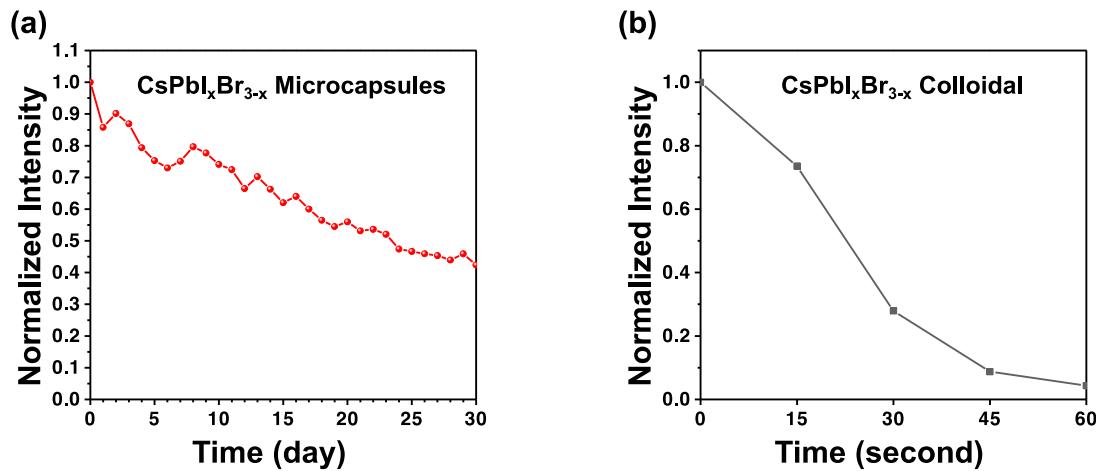

Figure S8. The relative fluorescence intensity of (a) $\text{CsPbI}_x\text{Br}_{3-x}$ microcapsules and (b) colloidal $\text{CsPbI}_x\text{Br}_{3-x}$ as a function of time in the water.

Table S1. Tabulated Fitted Lifetime Components for the CsPbBr_3 microcapsules and pure CsPbBr_3 perovskites.

Materials	τ_1	τ_2	χ^2	τ_{avg}
CsPbBr_3 microcapsules	3.83 ns (61.2%)	19.71 ns (38.7%)	0.994	15.98 ns
pure CsPbBr_3 perovskites	2.48 ns (75.8%)	13.66 ns (24.2%)	0.995	9.61 ns
