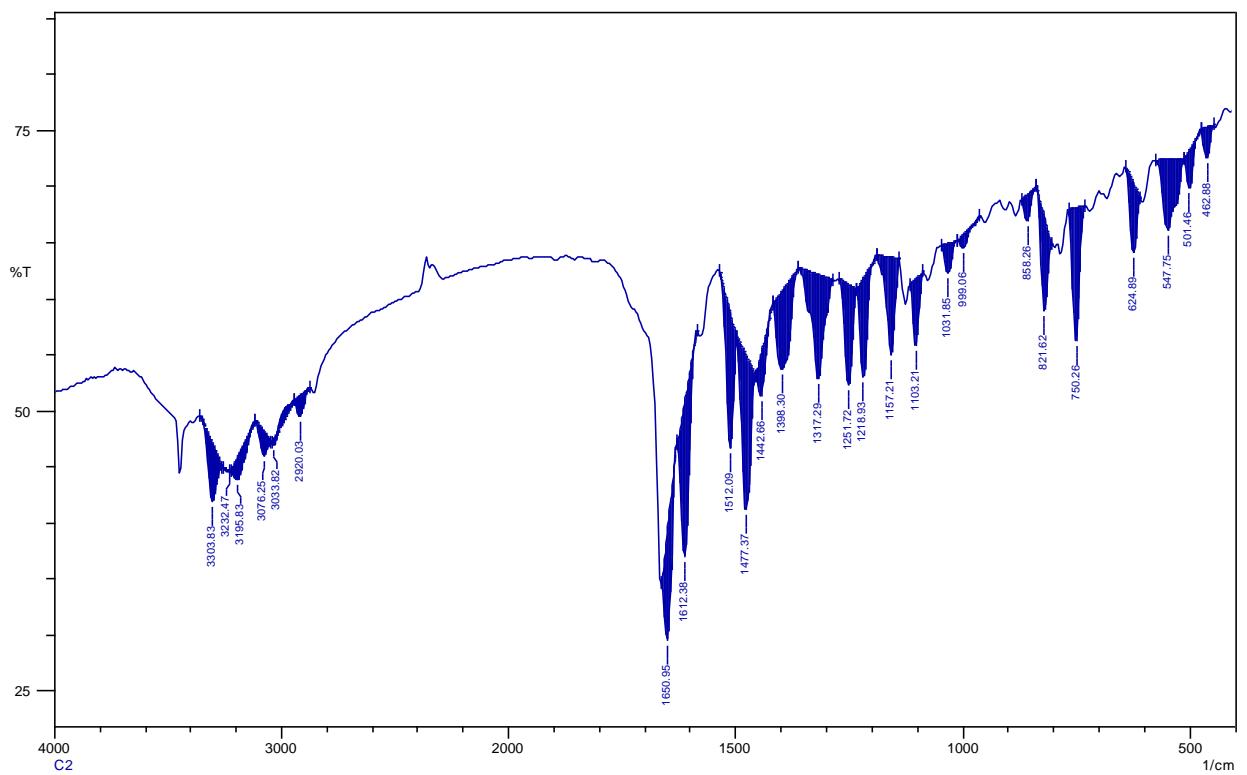

**Scheme S1.** Synthetic scheme for the preparation of 2-(5-bromo-2-fluorophenyl)-2,3-dihydroquinazolin-4(1*H*)-one (**3l**). Reagents and conditions: (a) graphene oxide (2.5%), water, stirred at room temperature; yield 82%–95%.

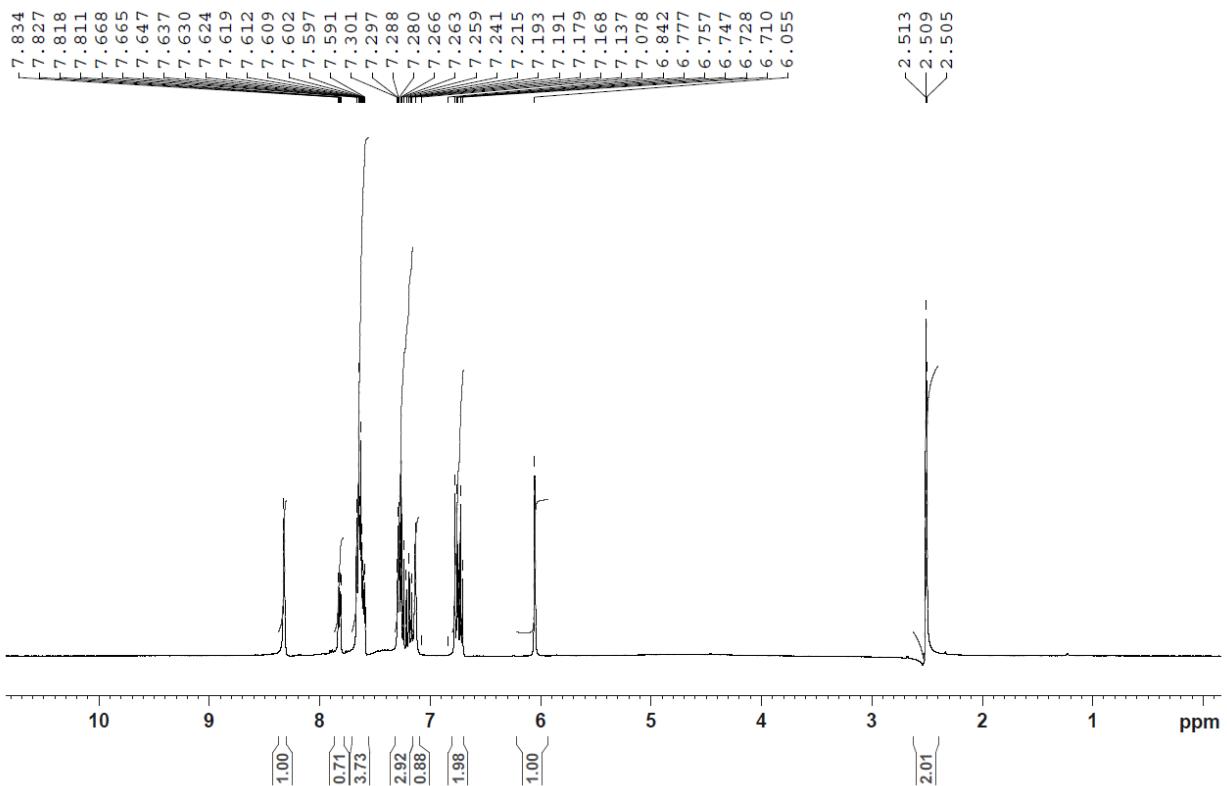

**Synthetic procedure for 2-(5-bromo-2-fluorophenyl)-2,3-dihydroquinazolin-4(1*H*)-one (**3l**)**

A mixture of 5-bromo-2-fluorobenzaldehyde (1.5 mmol) and 2-aminobenzamide (1 mmol) in 10 mL of water was stirred in a round-bottom flask with graphene oxide (2.5%) at room temperature, as depicted in Scheme S1. The progress of the reaction was monitored with TLC. After completion of the reaction, the insoluble precipitate obtained was separated and filtrated, and the crude product was washed with 50% cold ethanol. The crude product was recrystallized from 75% ethyl alcohol to obtain 65% of the title compound 2-(4-fluorophenyl)-2,3-dihydroquinazolin-4(1*H*)-one at 98% purity.
