

Targeted modification and structure-activity study of GL-29, an analogue of the antimicrobial peptide palustrin-2ISb

Siyan Liu, Yaxian Lin, Jiachen Liu, Xiaoling Chen, Chengbang Ma, Xinping Xi, Mei Zhou, Tianbao Chen¹, James F Burrows and Lei Wang

Figure S1: Secondary structure prediction of (a) GL-29, (b) GL-22, (c) GL-9, (d) LF-10 and (e) FV-9. The red, blue and green blocks in the figure represent the helical, coil and extended conformations. The secondary structure of VN-8 and FV-8 cannot be predicted due to the short length of the sequence.

(a) GL-29

(b) GL-22

(c) GL-9

(d) LF-10

(e) FV-9

Figure S2: Helical wheel projections of (a) GL-29, (b) GL-22, (c) GL-9, (d) LF-10 and (e) FV-9 with the arrow indicating the direction of the hydrophobic moments. The physical parameter of VN-8 and FV-8 cannot be analysed by Heliquest due to the short length of the sequence.

Figure S4: MALDI-TOF mass spectra of GL-29 and its analogues. MALDI-TOF mass spectrum of GL-29, the $[M+H]^+$ ion was observed as 3129.30 Da and the peak with a mass of 3151.19 Da and 3167.19 Da represent the sodium adductive ion $[M+Na]^+$ and the potassium adductive ion $[M+K]^+$, respectively (a). MALDI-TOF mass spectrum of GL-22, the $[M+H]^+$ ion was observed as 2512.54 Da and the peak with a mass of 2534.56 Da represents the sodium adductive ion $[M+Na]^+$ (b). MALDI-TOF mass spectrum of GL-9, the $[M+H]^+$ ion was observed as 999.0 Da (c). MALDI-TOF mass spectrum of LF-10, the $[M+H]^+$ ion was observed as 1214.50 Da and the peak with a mass of 1237.78 Da represents the sodium adductive ion $[M+Na]^+$ (d). MALDI-TOF mass spectrum of FV-9, the $[M+H]^+$ ion was observed as 1100.28 Da and the peak with a mass of 1122.84 Da represents the sodium adductive ion $[M+Na]^+$ (e). MALDI-TOF mass spectrum of VN-8, the $[M+H]^+$ ion was observed as 955.34 Da (f). MALDI-TOF mass spectrum of FV-8, the $[M+H]^+$ ion was observed as 945.61 Da and the peak with a mass of 967.15 Da represents the sodium adductive ion $[M+Na]^+$ (g).

Table S1: Secondary structure analysis of GL-22 truncated analogues in different solutions. These data represent the percentage (%) of helix, antiparallel and turn contents of different peptides. These were analysed by BeStSel (<http://bestsel.elte.hu/index.php>).

Peptide	H ₂ O			50% TFE		
	Helix	Antiparallel	Turn	Helix	Antiparallel	Turn
GL-29	6.0	28.1	15.7	49.4	0.4	12.7
GL-22	3.6	27.5	16.3	50	4.8	11.7
GL-9	8.4	28.6	13.9	23.0	23.1	14.6
LF-10	11.6	20.3	17.1	41.6	9.3	10.6
FV-9	7.7	43.6	7.7	45.2	4.7	0.0
FV-8	10.8	17	18.4	18.5	32.8	14.3
VN-8	3.4	34.2	14.3	24.0	28.9	12.3
