**Figure S1.** PLS-DA VIP scores for MS data from SALDI/NALDI (A), MALDI (B) experiments and with the use of two groups (C) and four groups (D) for all data.

**Figure S2.** ANOVA box plots for the nine most discriminating  $m/z$  values obtained for DFI4 and DFI30 bacterial lipids samples with use SALDI and MALDI approach.

**Figure S3.** Overview of blank MS spectra performed for SALDI targets with CVD-applied silver nanostructures (A-C) and MALDI matrices (D-F).
