

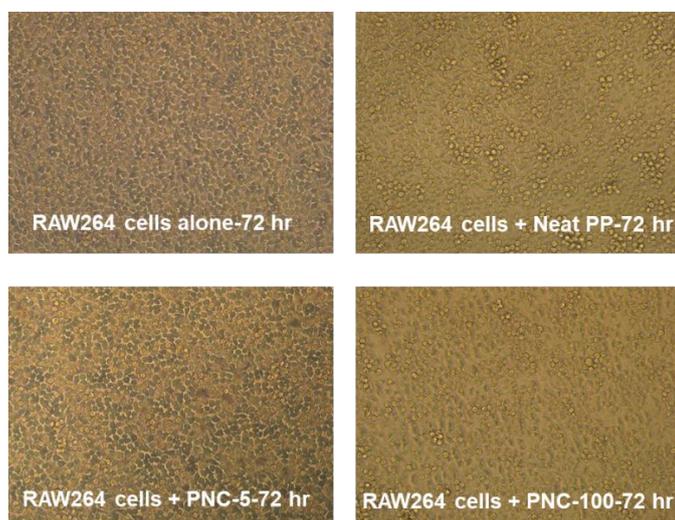

**Figure S1.** PNC effect on cell viability and cytotoxicity. Murine RAW264 cells ( $1 \times 10^6$  cell/ml) were exposed to  $0.5 \text{ cm}^2$  piece of Neat PP or PNC with increasing concentration of silver (Ag) and incubated for 24hr. RAW264 cell morphology captured with inverted bright microscopy.

**Figure S2.** PNC effect on cell viability and cytotoxicity. Murine RAW264 cells ( $1 \times 10^6$  cell/ml) were exposed to  $0.5 \text{ cm}^2$  piece of Neat PP or PNC with increasing concentration of silver (Ag) and incubated for 72hr. RAW264 cell morphology captured with inverted bright microscopy.
