**Table S1.** Marine fishes collected from fishing loading sites at Kampong Fikri (1) and Kampung Rhu Sepuluh (2) in Setiu, Terengganu, Peninsular Malaysia.

**Table S2.** Sampling details of cockle *Anadara granosa* from the west coast of Peninsular Malaysia.

**Table S3.** Sampling details of mangrove snail *Cerithidea obtusa* from the west coast of Peninsular Malaysia.

**Table S4.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]'s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel (PTWI%\*), for average-level consumers, in the 19 species of marine fishes collected from Setiu, Terengganu, Peninsular Malaysia. The high-level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

**Table S5.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]'s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel (PTWI%\*), for average-level consumers, in the 17 populations of mangrove snail *Cerithidea obtusa* collected from the west coast mangrove of Peninsular Malaysia. The high-level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

**Table S6.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]'s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel (PTWI%\*), for average-level consumers, in the 12 populations of cockle *Anadara granosa* collected from the west intertidal area of Peninsular Malaysia. The high-level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

**Table S7.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), recalculated values of average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]'s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel (PTWI%\*), for average-level consumers, in the 40 populations of mussel *Perna viridis* from the coastal waters of Peninsular Malaysia (Yap et al. [1]). The high-level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

**Table S8.** Mean nickel concentrations (mg/kg dry weight (DW) and wet weight (WW)) in various species of marine fishes reported in the literature, including the results of the present study (8 species).

**Table S9.** Nickel; values of estimated daily intake (EDI), target hazard quotient (THQ), and estimated weekly intake (EWI) calculated based on the present study and cited Ni data in the marine fishes from the literature.

**Table S10:** Overall statistics of nickel concentrations (mg/kg wet weight) (WW) with recalculation of estimated daily intake (EDI), target hazard quotient (THQ), and estimated weekly intake (EWI) in the 8 marine fish species cited from the literature (17 reports of 17 papers) (N= 17).

**Table S1.** Marine fishes collected from fishing loading sites at Kampong Fikri (1) and Kampung Rhu Sepuluh (2) in Setiu, Terengganu, Peninsular Malaysia.

Site	Common name	Scientific name	N	Conversion factor	Habitat niche
Family: <u>Carangidae</u>					
1	Malabar trevally	<i>Caranxoides malabaricus</i>	5	0.24	Reef-associated
1	Yellowtail scad	<i>Atule mate</i>	5	0.23	Reef-associated
1	Shortfin scad	<i>Decapterus macrosoma</i>	5	0.20	Reef-associated
1	Yellow stripe scad	<i>Selaroides leptolepis</i>	5	0.24	Reef-associated
1	Torpedo scad	<i>Megalaspis cordyla</i>	5	0.23	Reef-associated
1	Indian threadfish	<i>Alectis indica</i>	3	0.21	Reef-associated
Family: <u>Stromateidae</u>					
1	Chinese silver pomfret	<i>Pampus chinensis</i>	3	0.19	Benthopelagic
Family: <u>Clupeidae</u>					
1	Chacunda gizzard shard	<i>Anodontostoma chacunda</i>	5	0.23	Pelagic-neritic
Family: <u>Chirocentridae</u>					
1	Dorab wolf-herring	<i>Chirocentrus dorab</i>	5	0.23	Reef-associated
Family: <u>Scrombidae</u>					
1	Indian mackerel	<i>Rastrelliger kanagurta</i>	5	0.26	Pelagic-neritic
1	Narrow-barred Spanish mackerel	<i>Scomberomorus commerson</i>	3	0.23	Pelagic-neritic
Family: <u>Dasyatidae</u>					
1	Dwarf whipray	<i>Himantura walga</i>	3	0.21	Demersal
Family: <u>Nemipteridae</u>					
1	Ornate threadfin bream	<i>Nemipterus hexodon</i>	5	0.20	Demersal
Family: <u>Lactariidae</u>					
1	False trevally	<i>Lactarius lactarius</i>	5	0.21	Pelagic-neritic
Family: <u>Trichiuridae</u>					
1	Large head hairtail	<i>Trichiurus lepturus</i>	3	0.22	Benthopelagic
Family: <u>Ariidae</u>					
1	Spotted catfish	<i>Arius maculatus</i>	3	0.23	Demersal
Family: <u>Sciaenidae</u>					
2	Tigertooth croaker	<i>Otolithes ruber</i>	3	0.24	Benthopelagic
2	Goatee croaker	<i>Dendrophysa russelli</i>	5	0.23	Demersal
2	Belanger's croaker	<i>Johnius belangerii</i>	3	0.23	Demersal

Note: Conversion factor is wet weight (g) which was divided by dry weight (g) of the sample.

**Table S2.** Sampling details of cockle *Anadara granosa* from the west coast of Peninsular Malaysia.

Note: The dry weight basis was converted into wet weight by using the respective conversion factor of each fish species, as shown in Table 1.

Amount PTWI= Amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]'s recalculated PTWI limit (5642 µg/week) for nickel.

Intake\*= Mean weekly intake (MWI; mg/week) of nickel for average level fish (0.70 kg) and molluscs (0.28 kg) consumers (mg/week) and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel for average level (PTWI%\*) consumers.

Intake\*\*= Mean weekly intake (MWI; mg/week) of nickel for high-level fish (1.40 kg) and molluscs (0.56 kg) consumers (mg/week) and the percentages of EFSA [2]'s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel for high level (PTWI%\*\*) consumers.

**Table S5.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]’s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]’s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) **of nickel (PTWI%\*)**, **for average-level consumers**, in the 17 populations of mangrove snail *Cerithidea obtusa* collected from the west coast mangrove of Peninsular Malaysia. The high level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

Note: The dry weight basis was converted into wet weight by using a conversion factor of 0.20.

Amount PTWI= Amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]’s recalculated PTWI limit (5642 µg/week) for nickel.

Intake\*= Mean weekly intake (MWI; mg/week) of nickel for average level fish (0.70 kg) and molluscs (0.28 kg) consumers (mg/week) and the percentages of EFSA [2]’s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel for average level (PTWI%\*) consumers.

Intake\*\*= Mean weekly intake (MWI; mg/week) of nickel for high-level fish (1.40 kg) and molluscs (0.56 kg) consumers (mg/week) and the percentages of EFSA [2]’s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) of nickel for high level (PTWI%\*\*) consumers.

**Table S7.** The values of nickel concentrations (mg/kg in dry weight (DW) and wet weight (WW)), recalculated values of average estimated daily intake (EDI), target hazard quotient (THQ), estimated week intake (EWI), amount (kg) of samples that would need to be consumed per week by a 62-kg adult to reach the EFSA [2]’s (PTWI), mean weekly intake (MWI; mg/week) of nickel and the percentages of EFSA [2]’s recalculated PTWI limit (5642 µg/week based on a 62-kg adult) **of nickel (PTWI%\*)**, for average-level consumers, in the 40 populations of mussel *Perna viridis* from the coastal waters of Peninsular Malaysia (Yap et al. [1]). The high-level consumers (2 times of consumption rate of average-level consumers) are indicated by High.

No.	Sampling sites	DW	WW	EDI	THQ	EWI	High EDI	High THQ	High EWI	Amount PTWI	Intake*	High Intake**	PTWI%*	High PTWI%**

Note: The data cited from the literature were recalculated for EDI and THQ based on fish consumption rate (100 g/person/day) and body weight of 62 kg for the adult Malaysian population, according to Nurul Izzah et al. (2016). The data which were originally reported on a dry weight basis were all converted into a wet weight basis based on the conversion factor for each species from this study.

\* data that were originally reported on a wet weight basis. \*\* The maximum value was selected for recalculation.

**Table S9.** Nickel values of estimated daily intake (EDI), target hazard quotient (THQ), and estimated weekly intake (EWI) calculated based on the present study and cited Ni data in the marine fishes from the literature.
