Table S1. Target information of shRNA sequence.

ID	Sequence	Start	GC (%)
JAG1-RNAi(1)	GAATGGAGTACATCGTATA	4049	36.84
JAG1-RNAi(2)	GTTCAACCTGACAGTATTAA	847	36.84
JAG1-RNAi(3)	GAGCACATTGCAGTGAAT	3340	42.11
JAG1-RNAi(4)	AGGATAACTGTGCGAACAT	3275	42.11
JAG2-RNAi(1)	CTCACACAAATTACCAAAA	3993	36.84
JAG2-RNAi(2)	TCTACCAGTGCAAGAACTT	3845	42.11
JAG2-RNAi(3)	CTGCTACGACCTGGTCAAT	2466	52.63
JAG2-RNAi(4)	ACTGCCATATCAACGTCAA	1772	42.11
DLL1-RNAi(1)	ACGTCATATCCGAGGGAGAA	2439	47.37
DLL1-RNAi(2)	CGGGCTGTTCAACTTCAAA	2397	47.37
DLL1-RNAi(3)	CCGACAAGAATGGCTTCAA	2196	47.37
DLL1-RNAi(4)	TGTTCTAATGGTGCCAAGT	1556	42.11

Control: NC

Sequence: TTCTCCGAACGTGTCACGT

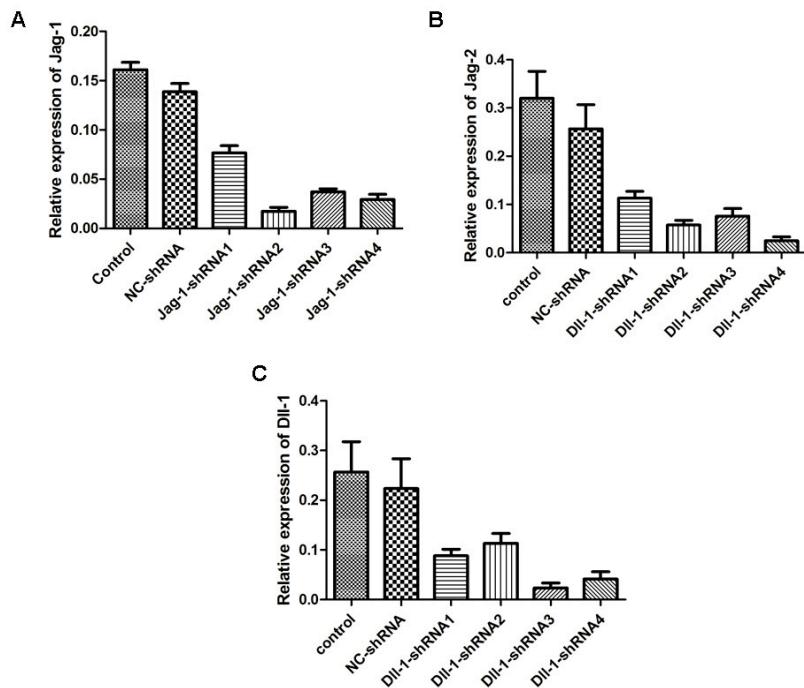

Figure S1

Figure S1. Efficiency of shRNA vectors. (A) JAG-1-shRNA: Cells on day 12 of otic progenitor differentiation were transfected with JAG-1-shRNA (1–4) and NC-shRNA. (B) JAG-2-shRNA: Cells on day 5 of hair cell differentiation were transfected with JAG-2-shRNA (1–4) and NC-shRNA. (C) DLL-1-shRNA: Cells on day 5 of hair cell differentiation were transfected with DLL-1-shRNA (1–4) and NC-shRNA. After 48 h of transfection, the total RNA was extracted and real-time PCR were performed to test the effects of various shRNAs on the expression of JAG-1, JAG-2, and DLL-1 respectively. Control: no transfection. The statistical results were significant ($p < 0.05$).

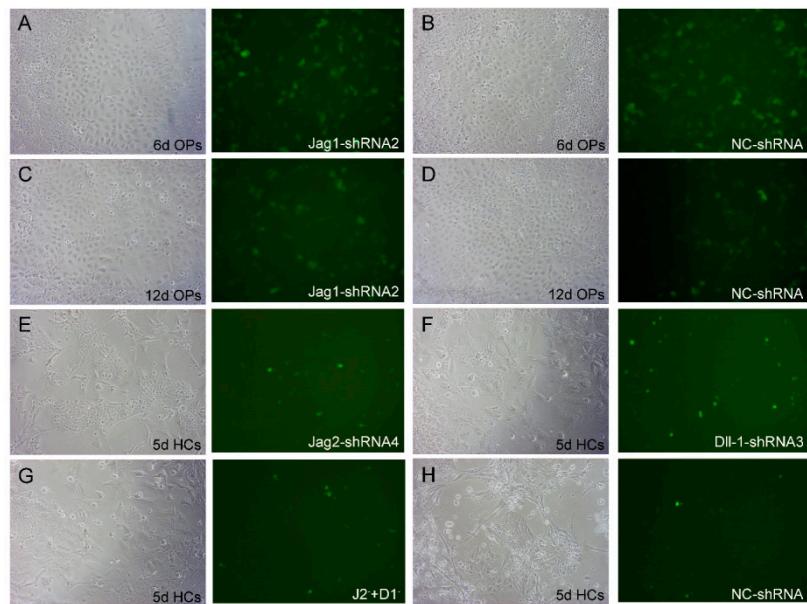

Figure S2

Figure S2. Infection efficiency of lentiviruses harboring shRNA. (A) Cell morphology and GFP expression in cells infected with lentivirus harboring JAG-1-shRNA2 on day 6 of otic progenitor differentiation. (B) Cell morphology and GFP expression in cells infected with lentivirus harboring NC-shRNA on day 6 of otic progenitor differentiation. (C) Cell morphology and GFP expression in cells infected with lentivirus harboring JAG-1-shRNA2 on day 12 of otic progenitor differentiation. (D) Cell morphology and GFP expression in cells infected with lentivirus harboring NC-shRNA on day 12 of otic progenitor differentiation. (E) Cell morphology and GFP expression in cells infected with lentivirus harboring JAG-2-shRNA4 on day 5 of hair cell differentiation. (F) Cell morphology and GFP expression in cells infected with lentivirus harboring DLL-1-shRNA3 on day 5 of hair cell differentiation. (G) Cell morphology and GFP expression in cells infected with lentiviruses harboring JAG-2-shRNA4 and DLL-1-shRNA3 on day 5 of hair cell differentiation. (H) Cell morphology and GFP expression in cells infected with lentivirus harboring NC-shRNA on day 5 of hair cell differentiation.

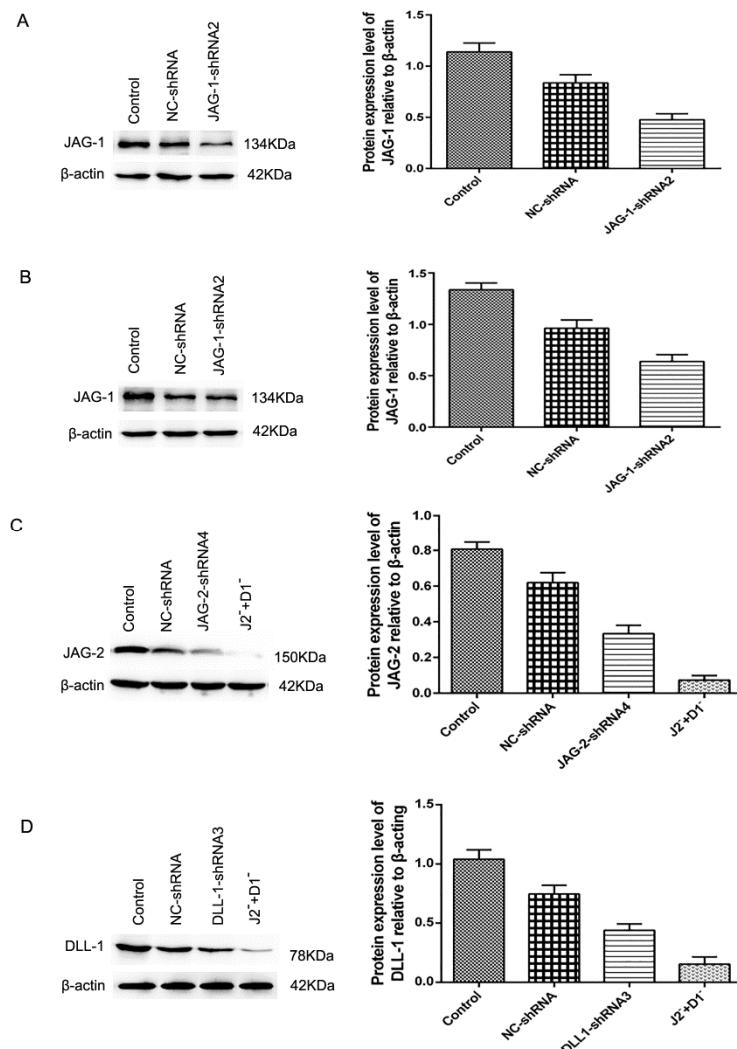

Figure S3

Figure S3. Identification of cells stably infected by the lentivirus. (A) and (B) Western blot analysis of cells infected with lentivirus harboring JAG-1-shRNA2 on day 6 and 12 of otic progenitor differentiation using an antibody specific for JAG-1. (C) and (D) Western blot analysis of cells infected with lentivirus harboring JAG-2-shRNA4 and DLL-1-shRNA3 at day 5 of hair cell differentiation using JAG-2 and DLL-1 specific antibodies. Uninfected cells (Control) and cells infected with lentivirus harboring NC-shRNA were used as controls. The statistical results were significant ($p < 0.05$)
