^a Multiplicity: s, singlet; d, doublet; t, triplet; dd, doublet of doublets; qu, quintet; m, multiplet. \,The signals were not determined.

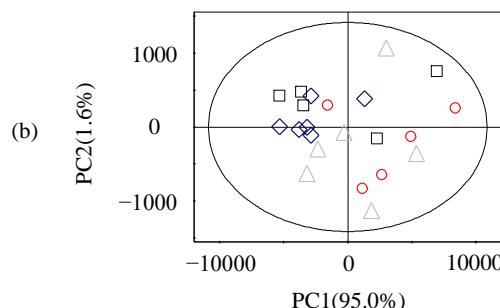

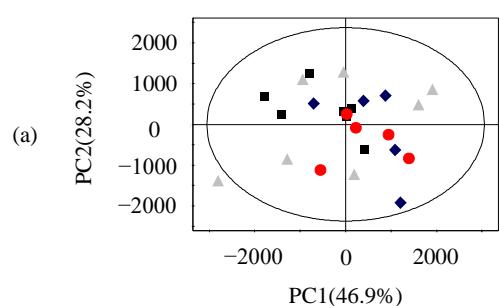

Figure S1. PCA scores plots of the NMR data for FHB-resistant Sumai 3 (a) and -susceptible wheat Annong 8455 (b) respectively. The numbers in parentheses indicate the overall variance explained in the first two principal components. Grey (triangle), black (square), red (circle), and blue (diamond) indicate metabolites in both FHB- resistant (solid symbol) and -susceptible wheat (open symbol) inoculated with ddH₂O, WT, *TPS1*⁻ and *TPS2*⁻ respectively.
