Supplementary Table S1. Eating habits at t0. Number of patients taking at least once a week a portion of the tabulated food.

Supplementary Table S2 Intervention group and control group's clinical average \pm standard deviation parameters at t0. *P-value* was calculated using *T-test*.

Supplementary Table S3 Intervention group's clinical average \pm standard deviation parameters at t0 and t6. *P-value* was calculated using *T-test*.

Supplementary Table S4 Control group's clinical average \pm standard deviation parameters at t0 and t6. *P-value* was calculated using *T-test*.

Supplementary Table S5. Intervention group and control group's clinical average \pm standard deviation parameters at t6. *P-value* was calculated using *T-test*.

Supplementary Table S6. Important serum and urine metabolites identified by Fold Change and logarithmic Fold Change ($\log_2(\text{FC})$) parameters calculated.

Supplementary Table S7. Important serum and urinary metabolites identified by t-tests values, p-values (Threshold <0.05), logarithmic p-values and False Discovery Rate (FDR) parameters calculated for the most statistically significant compounds.

Supplementary Figure S1. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of serum polar extract of intervention group at T0 (1) vs intervention group at T6 (2) in validation area.

Supplementary Figure S2. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of urine polar extract intervention group at T0 (1) vs intervention group at T6 (2) in validation area.

Supplementary Figure S3. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of serum polar extract intervention group at T6 vs CTRL group at T6 in validation area.

Supplementary Figure S4. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of urine polar extract intervention group at T6 vs CTRL group at T6 in validation area.

Supplementary Figure S5. PCA score plot for ^1H NMR data collected in 1D-NOESY spectra acquired at 600 MHz. Data represent the sera (a) and urine (b) from 79 women before (blue) and after (orange) bicarbonate-calcic water intake.

Supplementary Table S1. Eating habits at t0. Number of patients taking at least once a week a portion of the tabulated food.

Supplementary Figure S1. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of serum polar extract of intervention group at T0 (1) vs intervention group at T6 (2) in validation aerea

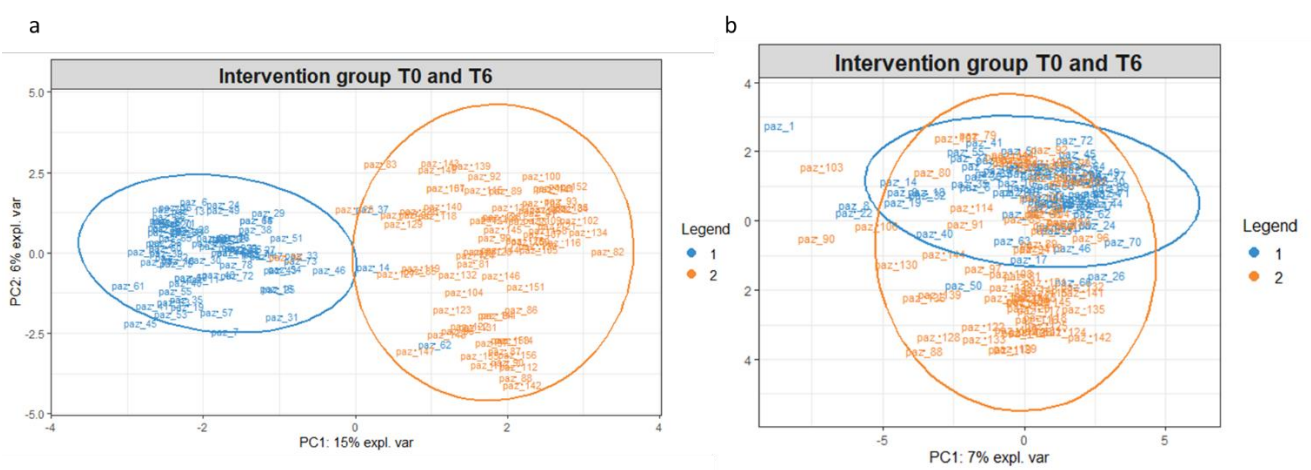

Supplementary Figure S2. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of urine polar extract intervention group at T0 (1) vs intervention group at T6 (2) in validation aerea.

Supplementary Figure S3. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of serum polar extract intervention group at T6 vs CTRL group at T6 in validation aerea.

Supplementary Figure S4. Sample prediction area plot carried out using Centroid (a) Maximum distance (b) and Mahalanobis (c) showing the distribution of urine polar extract intervention group at T6 vs CTRL group at T6 in validation aerea.

Supplementary Figure S5. PCA score plot for ¹H NMR data collected in 1D-NOESY spectra acquired at 600 MHz. Data represent the sera (a) and urine (b) from 79 women before (blue) and after (orange) bicarbonate-calcic water intake.
