

Figure S1. Chromatograms of flavonoids in *Abelmoschus manihot* L. at different flowering periods. a. T1 period, b. T2 period, c. T3 period. The peak numbers in the figure are represent vitexin rhamnoside (1), hyperoside (2), rutin (3), and quercetin (4).

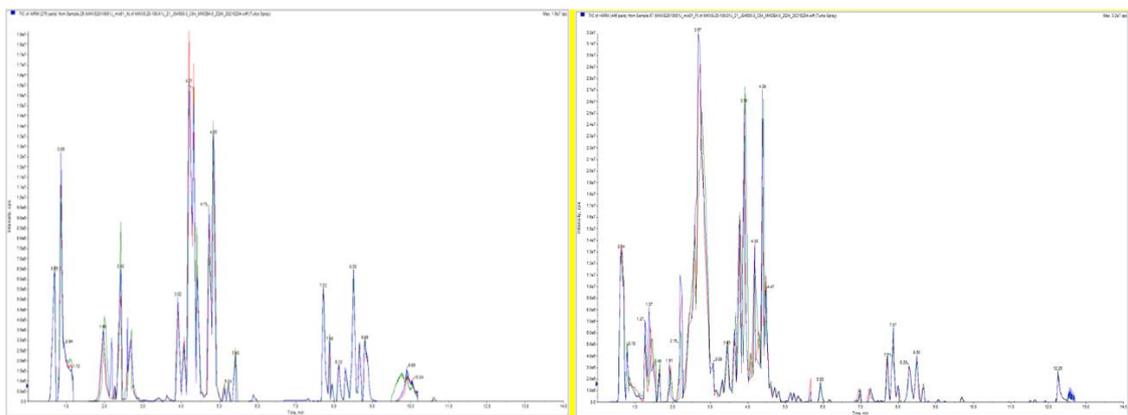

Figure S2. Overlap of TIC maps by mass spectrometry for QC samples.

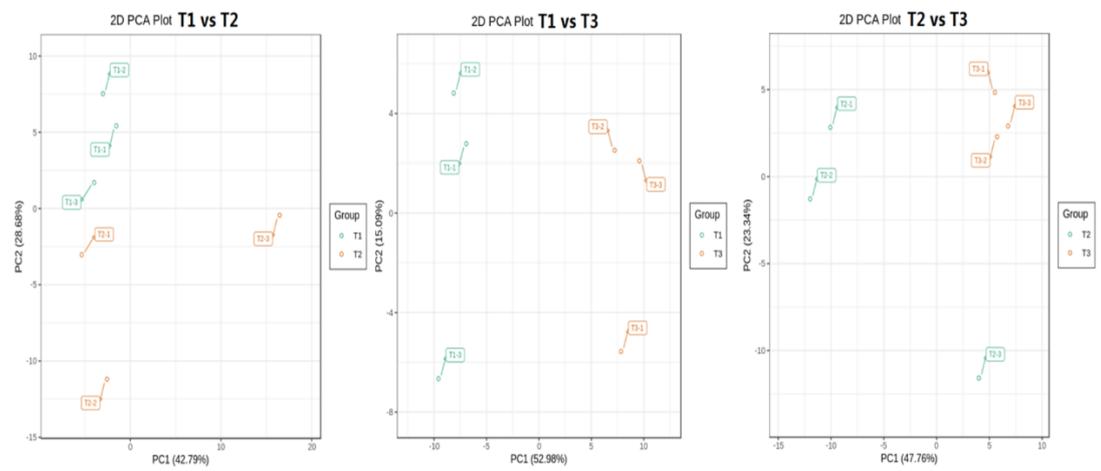

Figure S3. Grouped principal component analysis diagram of HSK flower groups.

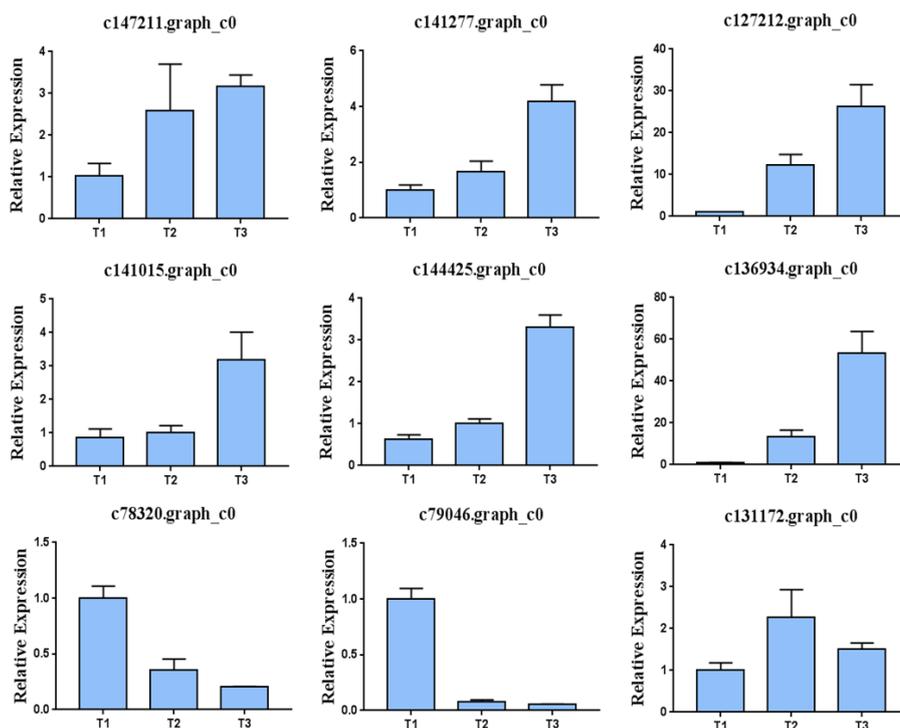

Figure S4. Expression analysis of 9 differentially expressed genes related to flavonoid and anthocyanin biosynthesis of *Abelmoschus manihot* L. by RT-PCR.
