

rreid@wustl.edu Supplementary Materials:

Table 1. Statistical analysis of composition of *C. fritschii* culture.

<u>Analysis</u>	<u>Carbohydrates</u>	<u>Lipids</u>	<u>Proteins</u>
Variable 1	Day: p= 0.373 ns	Day: p= 0.742 ns	Day: p= 0.0503 ns
Variable 2	Light: p= 0.340 ns	Light: p= 0.540 ns	Light: p= 0.5839 ns
Variable 3	Day*Light: p= 0.211 ns	Day*Light: p= 0.106 ns	Day*Light: p= 0.8976 ns
Statistical conclusion	No significant differences: carbohydrates, lipids and proteins content is not different between treatments nor between days.		

Table 2. Bioactive compounds produced by *Chlorogloeopsis* sp.

Products	Compound	Use	Reference
Photo protective compounds	Mycosporine-like amino-acids (MAA)	Sun-screen protectant	[1–3]
	Scytonemin	Sunscreen pigment	[4]
	Chlorophyll <i>a</i>	Pharmaceutical and cosmetic (deodorant)	[5]
Pigments	Phycocyanin	Food colorant (ice cream, sweets) cosmetics, biomedicine: immunofluorescent techniques, antibody labelling	[6]
	Zeaxanthin	Use as a compound in treatment of age-related macular degeneration, anticancer activity	[7]
Bioplastics	Polyesters of polyhydroxy alcanoates (PHA)	Thermoplastic comparable to the synthetic plastic, polypropylene	[8]
	Polyhydroxybutyrate (PHB)	Highly hydrophobic, thermoplastic, biodegradable and biocompatible	[8,9]
Plant growth promoters	Cytokinin	Promotes cell division in plant roots and shoots	[10]
