# Ramachandran Plot

## 2887118

### Plot statistics

Residues in most favoured regions [A,B,L]	231	87.2%
Residues in additional allowed regions [a,b,l,p]	26	9.8%
Residues in generously allowed regions [-a,-b,-l,-p]	3	1.1%
Residues in disallowed regions	5	1.9%
Number of non-glycine and non-proline residues	265	100.0%
Number of end-residues (excl. Gly and Pro)	2	
Number of glycine residues (shown as triangles)	39	
Number of proline residues	20	
Total number of residues	326	

Based on an analysis of 118 structures of resolution of at least 2.0 Angstroms and R-factor no greater than 20%, a good quality model would be expected to have over 90% in the most favoured regions.

**Figure S6:** Ramachandran plots of the generated 30 LysB homology models.
