

Supplementary Material

Figure S1. Validation of ANKRD1 loss in *Ankrd1*^{-/-} (KO) mice. (A) PCR products from mouse tail DNA samples which were amplified using primers listed in Table S1 (Supplementary Materials). M – low range DNA marker, NTC – no tissue control, Ctrl^{+/+} - DNA from WT BALB/c mice tail, Ctrl^{-/-} - DNA from primary F0 generation KO mice. (B) Representative Western blot and (C) corresponding quantitative densitometric analysis of ANKRD1 in WT ($n = 3$) and KO ($n = 3$) mice hearts lysates. GAPDH was used as a loading control. Data are represented as the mean \pm 95% CI. **($p < 0.01$) – marks statistically significant differences, by 2-tailed Student's *t*-test with unequal variances.

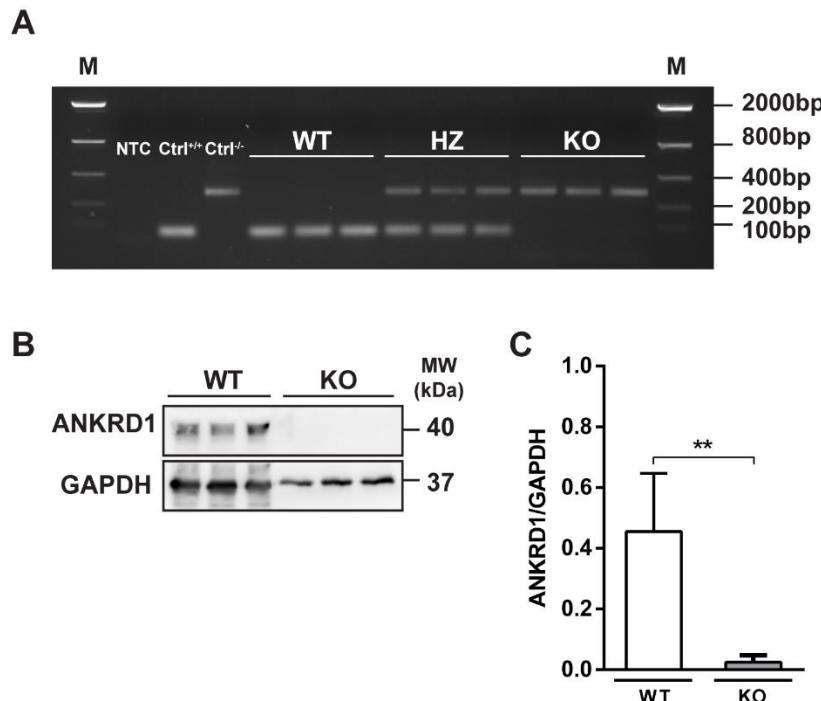

Figure S2. Body weight changes in mice after EAM induction. WT-Sham ($n = 5$), WT- α -MHC ($n = 8$), KO-Sham ($n = 5$) and KO- α -MHC ($n = 11$). The values are represented as mean \pm SEM.

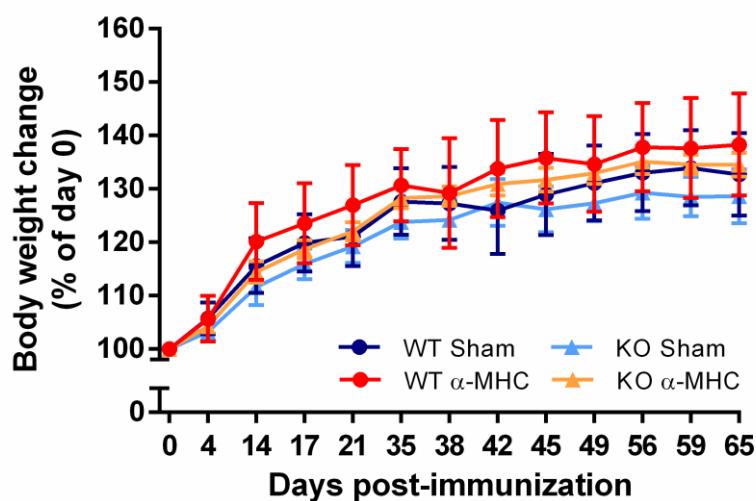

Figure S3. Representative original uncropped echocardiographic images of Sham and α -MHC mice prior immunization and at 65 day post-immunization used for the preparation of Figure 1.

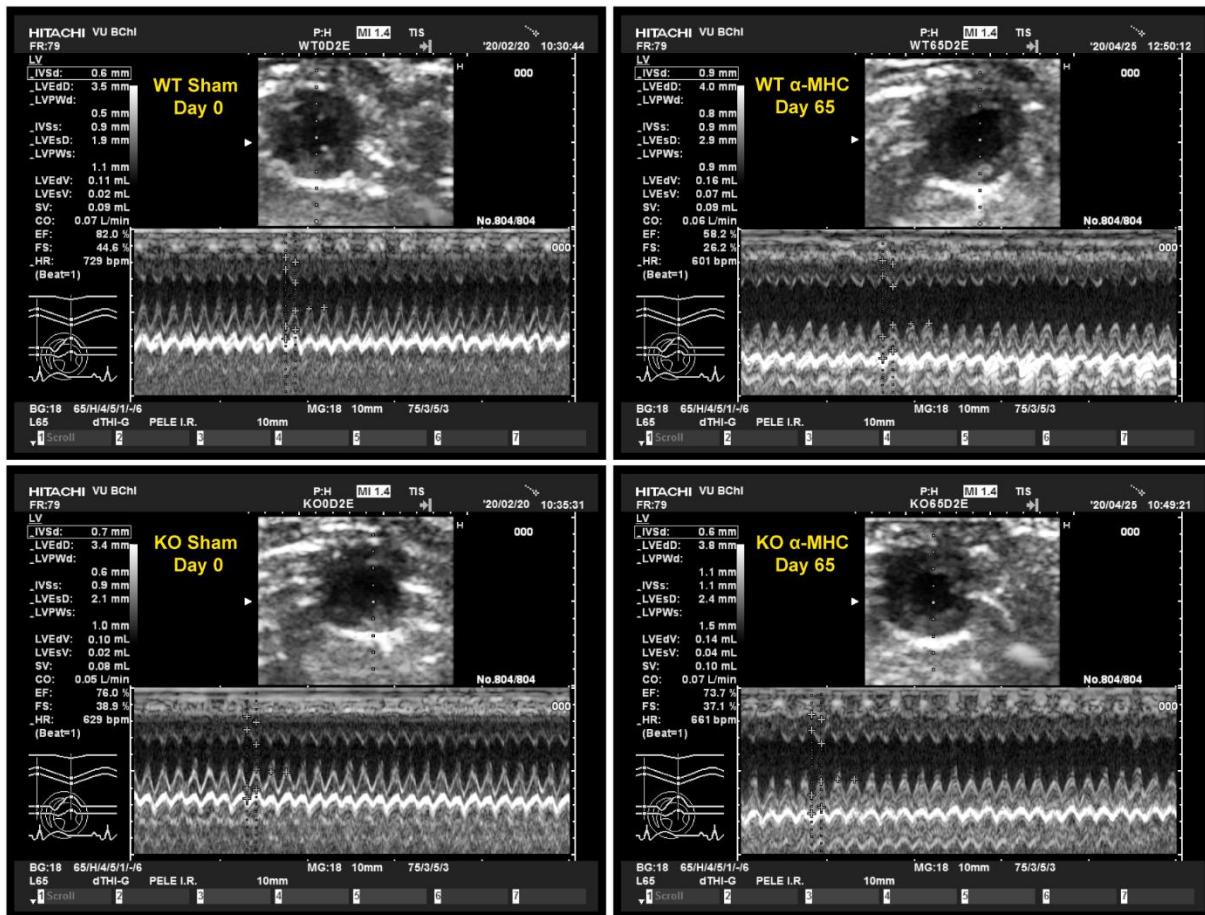

Figure S4. Images of original uncropped Western blots used for the preparation of Figure 3.
