

Supplementary Figure S1. Global O-GlcNAcylation decreases with F9 cell differentiation towards a XEN-like lineage: (a) Immunodot blot and densitometry of F9 cells treated with DMSO (control), 0.5 μ M RA, or 0.5 μ M RA + 1 mM db-cAMP; (b) Expression levels of *Ogt* and *Oga* transcripts in F9 cells treated as in (a) as detected by RT-qPCR and their ratio. Bars represent means values \pm S.E.M, N=3. *P<0.05, **P<0.01.

Supplementary Figure S2. Expression of many galectins are decreased in F9 cells differentiated towards a XEN-like lineage. Expression of *Lgals1*, *Lgals2*, *Lgals3*, *Lgals4*, *Lgals7*, *Lgals8*, *Lgals9* and *Lgals12* as detected by RT-qPCR in F9 cells treated with DMSO (control), 0.5 μ M RA or 0.5 μ M RA + db-cAMP. Bars represent mean values \pm S.E.M, N=3. **P<0.01, ***P<0.001, ****P<0.0001.
