

Supplementary Figure S1. HTM cell viability assay after stimulation with TGF- β 3 at the concentration of 100 ng/mL for (A) 24 h and (B) 72 h. The results showed that treated with 100 ng/mL TGF- β 3 for 24 h did not induce significant changes in HTM cells viability. Stimulation of 100 ng/mL TGF- β 3 for 72 h did not induce significant changes in cells viability compared to the control group. Data are presented as the mean \pm standard deviation, $n = 4$.
