4m	100	60	17.0±3.5
Control		60	3.3±1.7

\*The screening tests were conducted following the same procedure described in the toxicity test. A higher dosage at 100  $\mu\text{g}$  per fly of each derivative was used to evaluate the effect on mortality of female *A. suspensa*. In each test, 19~20 female adults were tested and replicated 3 times. Neat acetone was used as control.
