

Supplementary Material

1. Correlation between native and non-native Shannon diversity

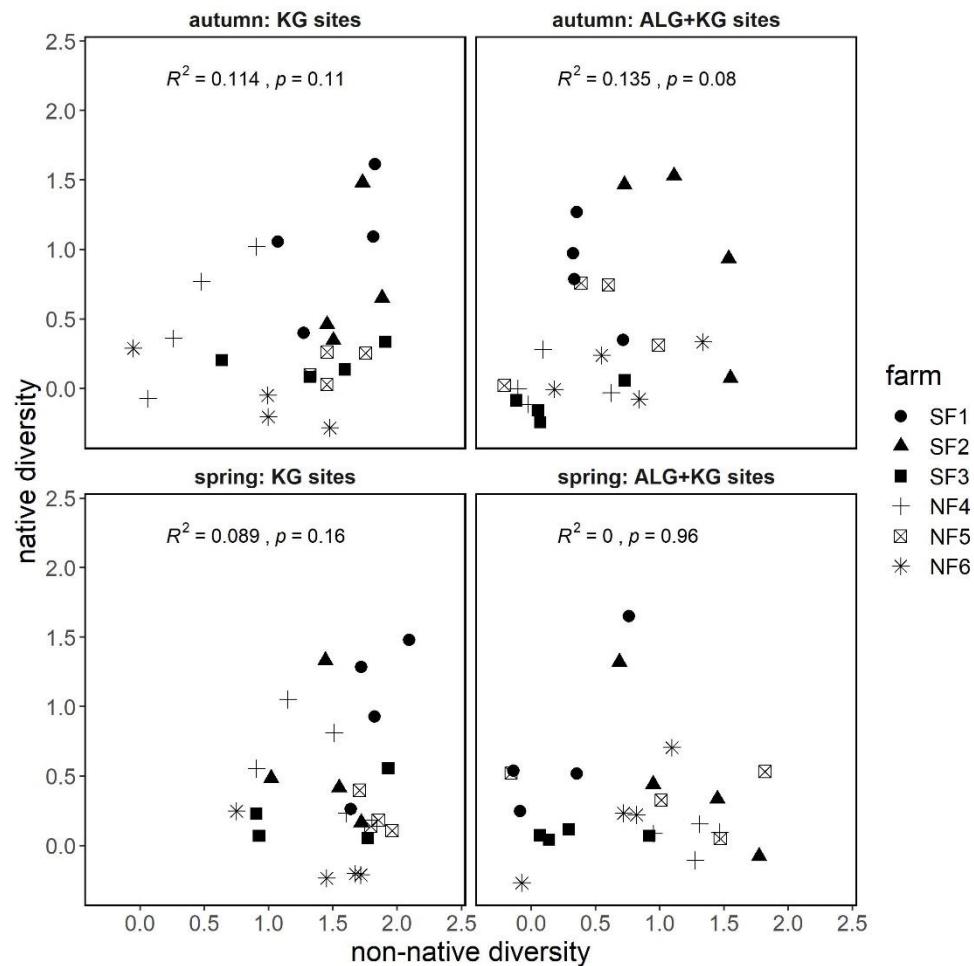

Figure S1: Correlation among native and non-native Shannon diversity per plot for each site type and season, including Pearson correlation coefficient (R^2) and p-value.

2. Correlation between native and non-native species richness

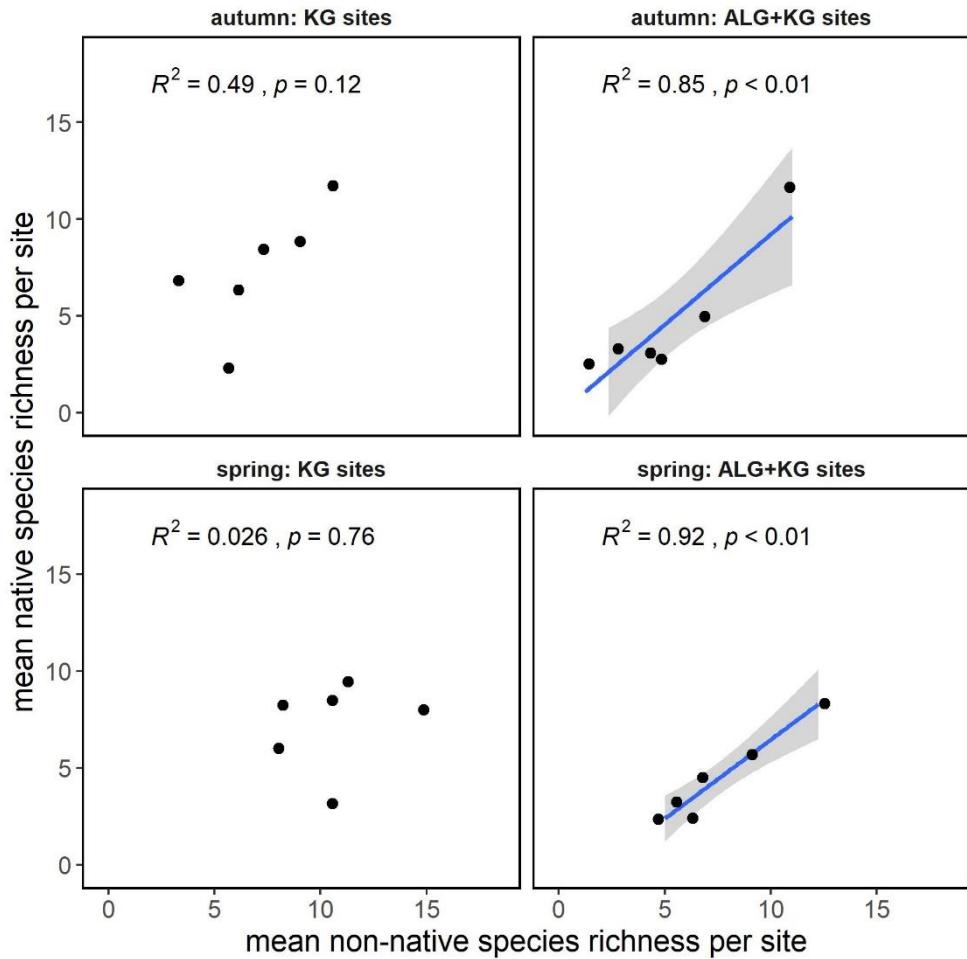

Figure S2: Correlation among mean native and mean non-native species richness per farm, separated for each site type and season, including Pearson correlation coefficient (R^2) and p-value.

3. SIMPER Output

Table S1. Output of SIMPER among KG and ALG+KG sites based on abundance data in autumn. Average: mean contribution to the overall dissimilarity, sd: standard deviation of the average dissimilarity, ava: average abundance per plot on ALG+KG sites, avb: average abundance per plot on KG sites, cumsum: ordered cumulative contribution.
