

Supplementary Materials

For Tables S1, S2 and S3:

Linear-plateau model for maize kernel weight (KW, mg grain⁻¹) versus thermal time (TT, °C day) after silking:

$$KW = a + b TT, \quad \text{when } TT \leq c$$

$$KW = a + bc, \quad \text{when } TT > c$$

where a is the y -intercept (mg), b is the effective grain-filling rate (EGFR, mg °C day⁻¹) and c is the grain-filling duration (GFD, °C days).

Table S1. N rate treatment comparison for parameters a , b (EGFR) and c (GFD) in Experiment 1 (La Crosse, IN, 2017). For each parameter, contrasts' p-values were adjusted by Tukey method for comparing a family of 3 estimates.

Parameter	Contrast	Estimate	Standard Error	Degrees of Freedom	t ratio	p-value
a	0N - 112N	17.9	5.27	24	3.393	0.0065

For Tables S4, S5 and S6:

Linear-plateau model for maize kernel N content (KNC, mg N grain⁻¹) versus thermal time (TT, °C day) after silking:

$$\begin{aligned}
 KNC &= a + b \, TT, & \text{when } TT \leq c \\
 KNC &= a + bc, & \text{when } TT > c
 \end{aligned}$$

where a is the y -intercept (mg), b is the kernel N accumulation rate (KNAR, mg N °C day⁻¹) and c is the kernel N accumulation duration (KNAD, °C days).

Table S4. N rate treatment comparison for parameters a , b (KNAR) and c (KNAD) in Experiment 1 (La Crosse, IN, 2017). For each parameter, contrasts' p-values were adjusted by Tukey method for comparing a family of 3 estimates.
