

Supplementary Data

Diversity and cytogenomic characterization of wild carrots in the Macaronesian Islands

Guilherme Roxo, Mónica Moura, Pedro Talhinhos, José Carlos Costa, Luís Silva, Raquel Vasconcelos, Miguel Menezes Sequeira, and Maria Manuel Romeiras

Table S1: Raunkier classification of the sampled taxa

Taxon	Raunkier Classification
<i>Daucus carota</i> L. subsp. <i>azoricus</i> Franco	Hemicryptophyte
<i>Daucus carota</i> L. subsp. <i>carota</i>	Hemicryptophyte
<i>Daucus carota</i> subsp. <i>gummifer</i> (Syme) Hook.f.	Hemicryptophyte
<i>Daucus carota</i> L. subsp. <i>halophilus</i> (Brot.) A. Pujadas	Hemicryptophyte
<i>Daucus carota</i> L. subsp. <i>maximus</i> (Desf.) Ball	Hemicryptophyte
<i>Daucus carota</i> L. subsp. <i>sativus</i> (Hoffm.) Arcang	Hemicryptophyte
<i>Daucus crinitus</i> Desf.	Hemicryptophyte
<i>Daucus muricatus</i> (L.) L.	Therophyte
<i>Melanoselinum decipiens</i> (Schrad. & J.C.Wendl.) Hoffm.	Chamaephyte or Microphanerophyte*
<i>Monizia edulis</i> Lowe	Chamaephyte
<i>Pseudorlaya pumila</i> (L.) Grande	Therophyte
<i>Tornabenea annua</i> Bég.	Hemicryptophyte
<i>Tornabenea bischoffii</i> J.A. Schmidt	Chamaephyte
<i>Tornabenea insularis</i> (Parl. Ex Webb) Parl. Ex Webb	Hemicryptophyte
<i>Tornabenea ribeirensis</i> Schmidt & Lobin	Hemicryptophyte
<i>Tornabenea tenuissima</i> (A. Chev.) A. Hansen & Sunding	Chamaephyte

* On the statistical analysis we followed the classification of Frankiewicz et al. [20].

Table S2: Phytosociological vegetation units of the sampled taxa

Taxa	Phytosociological Vegetation Unit
<i>Daucus carota</i> L. subsp. <i>azoricus</i> Franco	<i>Euphorbio azoricae – Festucion petraeae</i> <i>Tolpido succulentae – Agrostion congestiflorae</i> <i>Holco rigidii – Brachypodietum gaditaniae</i>
<i>Daucus carota</i> L. subsp. <i>carota</i>	<i>Artemisieta vulgaris</i>
<i>Daucus carota</i> subsp. <i>gummifer</i> (Syme) Hook.f.	<i>Crithmo – Armerietalia</i>
<i>Daucus carota</i> L. subsp. <i>halophilus</i> (Brot.) A. Pujadas	<i>Crithmo maritimii – Daucion halophili</i> <i>Scrophulario sublyratae – Lavateretum arboreae</i>
<i>Daucus carota</i> L. subsp. <i>maximus</i> (Desf.) Ball	<i>Onopordion castellani</i>
<i>Daucus crinitus</i> Desf.	<i>Hyparrhenion hirtae</i>
<i>Daucus muricatus</i> (L.) L.	<i>Hordeion leporini</i>
<i>Melanoselinum decipiens</i> (Schrad. & J.C.Wendl.) Hoffm.	<i>Euphorbion melliferae</i> <i>Isoplexido sceptri – Euphorbiatum melliferae</i> <i>Sinapidendro angustifolii – Aeonion glutinosi</i>
<i>Monizia edulis</i> Lowe	<i>Monizia edulis</i> community
<i>Pseudorlaya pumila</i> (L.) Grande	<i>Vulpialetalia</i> <i>Globulario amygdalifoliae – Periplocion chevalieri</i> <i>Echio hypertropici – Euphorbiatum tuckeyanae</i> <i>Dichrostachyo platycarpae – Acaciagetum caboverdeanae</i> <i>Heteropogonetum melanocarpi</i>
<i>Tornabenea annua</i> Bég.	<i>Globulario amygdalifoliae – Periplocion chevalieri</i> <i>Loto latifolii – Artemisieta gogonei</i> <i>Melanoselinum bischoffii – Globarietum amygdalifoliae</i> <i>Dichanthio foveolati – Heteropogonetum contorti</i>
<i>Tornabenea bischoffii</i> J.A. Schmidt	

Tornabenea insularis (Parl. ex Webb) Parl. ex Webb

Globulario amygdalifoliae – *Periplocion chevalieri*

Coccu penduli – *Sarcostemmetea daltonii*

Aeonio gorgonei – *Sarcostemmetum daltonii*

Echio stenosiphonis – *Euphorbiatum tuckeyanae*

Tetraeno waterlotii – *Sarcostemmetum daltonii*

Launaeo thalassicae – *Euphorbiatum tuckeyanae*

Asterisco smithii – *Euphorbiatum tuckeyanae*

Forsskaoleo procridifoliae – *Ficetum gnaphalocarpae*

Campanulo bravensis – *Launaetum thalassicae*

Dichrostachyo platycarpae – *Acacieta caboverdeanae*

Fico gnaphalocarpae – *Acacion caboverdeanae*

Globulario amygdalifoliae – *Periplocion chevalieri*

Echietum vulcanori

Erysimo caboverdeanae – *Periplocetum chevalieri*

Tornabenea ribeirensis Schmidt & Lobin

Tornabenea tenuissima (A. Chev.) A. Hansen & Sunding

Table S3: Description of the phytosociological vegetation units of the sampled taxa

Phytosociological Vegetation Unit	Description
<i>Aeonio gorgonei</i> – <i>Sarcostemmetum daltonii</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical and edapho-xerophilous dwarf shrub savanna community rich in succulent plants well-developed on S. Nicolau and São Vicente Islands on skeletal leptosols ancient altered volcanic rocky, in tropical desertic, thermotropical arid bioclimate, often affected by the trade winds from the north, especially in winter.
<i>Artemisieta vulgaris</i> Lohmeyer, Preisig & Tüxen in Tüxen 1950 ex von Rochow 1951	Pioneer and ruderal sunny vegetation composed by perennial and tall biennial forbs, grasses, and thistles. These communities prosper in deep soils enriched in nitrogen (due to man or cattle action). In Mediterranean pluviseasonal and temperate bioclimate. Holarctic distribution, neophytes in all tropical areas.
<i>Asterisco smithii</i> – <i>Euphorbiatum tuckeyanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical closed shrub savanna community growing on coluvisols and leptic andosols.
<i>Campanulo bravensis</i> – <i>Launaetum thalassicae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Thermotropical arid to semiarid chasmophytic association, occurs on volcanic rocks of Brava Island
<i>Coccu penduli</i> – <i>Sarcostemmetea daltonii</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Micro-shrubland often succulent and deciduous micro-woodland open savanna of Cabo Verde, mostly with arid tropical bioclimate; occurring in desertic, xeric, infra-thermo-meso to lower supratropical ultrahyperarid to upper dry, strongly euhyperoceanic bioclimate; growing on arenosols, andosols, leptosols (lithic, skeletic, hyperskeletal) or fluvi-regosols and sometimes on little altered volcanic materials (lava and tephra).
<i>Crithmo</i> – <i>Armerietalia</i> Géhu & Géhu-Frank 1984	Atlantic chasmophytic aerohaline pioneer communities of sea cliffs.
<i>Crithmo maritimi</i> – <i>Daucion halophili</i> Rivas-Martínez, Lousã, T.E. Diaz, Fernández-González & J.C. Costa 1990	Rupicolous dwarf-herb vegetation of salt-sprayed cliffs of the southwestern Iberian Peninsula and Northern Morocco.
<i>Dichanthio foveolati</i> – <i>Heteropogonetum contorti</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Xeromorphic perennial grassland savanna, growing on leptic andosols, in upper thermotropical to lower mesotropical and from lower semiarid to dry bioclimates.
<i>Dichrostachyo platycarpae</i> – <i>Acacieta caboverdeanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Deciduous micro-woodland climactic savanna (<i>Fico gnaphalocarpae-Acacion caboverdeanae</i>), growing on lithosols, arenosols, andosols and tephras, including the edaphohydrophilous coastal palm groves (<i>Phoenicion atlanticae</i>) and temporary wet tamarisk thickets (<i>Tamaricion senegalensis</i>), occurring in infra-thermotropical and low mesotropical upper arid to dry bioclimates, occasionally in lower subhumid; when in arid bioclimates seems to be necessary a shallow temporary hydromorphism on soils.
<i>Dichrostachyo platycarpae</i> – <i>Acacetum caboverdeanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactic phanerophytic deciduous microwoodland savanna community, growing on andosols and leptosols, on Santiago Island. It occurs in upper infra and thermotropical, upper arid, semiarid, and lower dry bioclimate.
<i>Echietum vulcanori</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Shrub climactical open savanna community dominated and well characterized by the local endemic <i>Echium vulcanorum</i> .
<i>Echio hypertropici</i> – <i>Euphorbiatum tuckeyanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Edaphoxerophytic and climatical tall, crowded shrub savanna community of Serra da Malagueta (Santiago Island), growing on andosols and coluvisols, in tropical xeric and occasionally some years pluviseasonal, thermotropical, semiarid to dry euhyperoceanic bioclimate.

<i>Echio stenosiphonis</i> – <i>Euphorbiectum tuckeyanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical shrub savanna community, growing on leptic andosols near the summit of de São Vicente Island, in topographical tropical cloudy, thermotropical, upper arid, euhyperoceanic bioclimate.
<i>Erysimo caboverdeanae</i> – <i>Periplocetum chevalieri</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical and edaphoxerophilous tall shrub savanna community, occurring on leptosols and leptic andosols in Fogo Island, in tropical xeric, thermo-mesotropical, semiarid to upper dry, euhyperoceanic bioclimate.
<i>Euphorbia azoricae</i> – <i>Festucion petraeae</i> Lüpnitz 1976	Vegetation of salt-sprayed coastal cliffs of the Azores. Termomesotemperate levels.
<i>Euphorbion melliferae</i> Capelo, J.C. Costa, Jardim, Sequeira, Aguiar & Lousã 2003	Microphyllous caulirosulate communities with woody habit and large leaves, proper interrupt the forest canopy.
<i>Fico gnaphalocarpae</i> – <i>Acacion caboverdeanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Deciduous open micro-woodlands savanna, climactical, edaphoxerophilous or seasonally hygrophilous with fleeting superficial temporal hydromorphy; growing in upper infra and thermotropical arid to dry bioclimates; developed on lithic or regosolic soils.
<i>Forsskaoleo procrisifoliae</i> – <i>Ficetum gnaphalocarpae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Micro-mesophanerophytic woodland savanna community, growing on seasonal temporary moist shallow soils, on plains and torrents with fleeting superficial temporary hydromorphy.
<i>Globulario amygdalifoliae</i> – <i>Periplocion chevalieri</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Desertic and xeric climactical tropical and edaphoxerophilous tall shrub savanna community; in thermo-mesotropical, occasionally lower supratropical, from upper arid to upper dry, locally some years low subhumid (Fogo Island); developed on leptosols, andosols, colluvial and tephric soils.
<i>Heteropogonetum melanocarpi</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Xeromorphic perennial short grassland savanna, occurring in thermo to lower mesotropical semiarid to dry bioclimates, in Santiago and Fogo Islands, growing on leptic andosols.
<i>Holco rigidii</i> – <i>Brachypodietum gaditaniae</i> Aguiar & F. Prieto in F. Prieto, Aguiar & Dias 2012	Thermotemperate or thermomediterranean mesoxerophilous grassland of <i>Brachypodium gaditanum</i> , in less disturbed habitats co-dominated by <i>Holcus rigidus</i> . Its habitats are small platforms in rock outcrops with soil accumulations provided by solifluction and earth flows.
<i>Hordeion leporini</i> Br.-Bl. in Br.-Bl., Gajewski, Wraber & Walas 1936 corr. O. Bolòs 1962	Mediterranean ruderal winter-annual grasslands.
<i>Hyparrhenion hirtae</i> Br.-Bl., Rozeira & P.Silva 1956	Grassland rich in perennial tall grasses, deep soils of rocky/ clayey cliffs, abandoned fields with some nitrification in infra to mesomediterranean semiarid to subhumid bioclimate; Mediterranean distribution.
<i>Isoplexis sceptri</i> – <i>Euphorbiectum melliferae</i> Capelo, J.C. Costa, Jardim, Sequeira, Aguiar & Lousã 2003	Microphyllous caulirosulate community, endemic from Madeira Island, on rocky basaltic walls, in mesotemperate to low supratemperate, humid to hyper-humid, in laurissilva clearances or places submitted to landslides.
<i>Launaea thalassicae</i> – <i>Euphorbiectum tuckeyanae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Edaphoxerophilous closed shrub savanna community, on leptosols and basalt on rocks and near vertical walls exposed to moist and wet winds.
<i>Loto latifolii</i> – <i>Artemisetum gogenei</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical closed shrub savanna community, growing on leptics andosols, in upper thermotropical and lower mesotropical, semiarid to lower dry, euhyperoceanic bioclimate in Santo Antão Island.
<i>Melanoselino bischoffii</i> – <i>Globarietum amygdalifoliae</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Edaphoxerophilous nanophanerophytic short savanna community, growing on leptosols and basalt walls exposed to moist and wet winds, in tropical pluviseasonal, thermotropical, dry, euhyperoceanic bioclimate, in Santo Antão Island.
<i>Monizia edulis</i> community	In vertical basaltic walls in the road for Curral das Freiras, alongside with other taxa either from moister and higher areas as well as from drier and lowest parts of the island.
<i>Onopordion castellani</i> Br.-Bl. & O. Bolòs 1958 corr. Rivas-Martínez, T.E. Díaz, Fernández-González, Izco, Loidi, Lousã & Penas 2002	Ruderal indifferent edaphic thistles communities, in abandoned fields and crops on amended deep soils, with a short period of hydromorphy, in infra-supra-mediterranean bioclimate with Mediterranean West Iberian, Baetic and Maghrebi distribution.
<i>Scrophulario sublyratae</i> – <i>Lavateretum arboreae</i> J.C. Costa, Capelo, Neto, Arsénio & Lousã 2012	Ornitocophilous, nitrophilous and aerohaline association; islands reefs and coastal cliffs with rough sea, in the Sadensean-Portuguese Subprovince frontier; indifferent edaphic, in granites, syenites, and limestones in Mediterranean pluviseasonal-oceanic, euhyperoceanic, lower mesomediterranean to upper thermomediterranean, dry bioclimate.
<i>Sinapidendro angustifolii</i> – <i>Aeonion glutinosi</i> Capelo, J.C. Costa, Lousã, Fontinha, Jardim, Sequeira & Rivas-Martínez 2000	Madeiran chomophytic and chasmophytic succulent-rich scrub on volcanic rock substrates and walls.
<i>Tetraeno waterlotii</i> – <i>Sarcostemmetum daltonii</i> Rivas-Martínez, Lousã, J.C. Costa & M.C. Duarte 2017	Climactical and edaphoxerophilous close dwarf shrub savanna community, occurring in Brava Island on leptosols in lower thermotropical arid, euhyperoceanic bioclimate.

Tolpido succulentae – *Agrostion congestiflorae* Aguiar & F. Prieto in F. Prieto, Aguiar & Dias 2012

Vulpia Pignatti 1953

Thermomediterranean, occasionally thermoremparate, perennial graminoid communities of cliffs and landslide scarps.

Mediterranean and Ibero-Atlantic ephemeral therophytic vegetation on coastal sand dunes under influence of salt spray.

Table S4: Taxa of the sampled *Daucinae* tribes and their sampling locations (A, African Territory; Eu, European Territory; Az, Azores; CV, Cabo Verde; EU, Lu, mainland Portugal; Ma, Madeira; D, Desertas; F, Fogo; Fa, Faial; Fl, Flores; MA, Madeira Island; Pi, Pico; S, Santiago; SA (Az), Santa Maria; SA (CV), Santo Antão; SN, São Nicolau; SV, São Vicente).
