

Supplementary Materials

Table S1. Plant functional traits used for statistical analyses, their criteria and data sources.

Species trait	Description	Source
Dispersal mode	Categorical. Differentiation between adaptation to anemochory (subdivided in plumed, winged and dust diaspores), hydrochory, myrmecochory, further epizochory (mammals), endozoochory. Multiple classification per species possible	[46], own observations
Seed weight	numeric, if different values from different sources - mean value	[Error! Reference source not found.5, 46, 47, 49, 56]
Seed size (length, width, thickness)	numeric, if different values from different sources - mean value. Regarded size of dispersed units	[46, 47], own measurements
Seed buoyancy	numeric (buoyant days) if different values from different sources - mean value	[13, 29, 51, 57, 58, 59], own measurements
Average stem height (seed release height)		[46, 60]
Reproductive strategy	Categorized in 4 classes: s (only by seeds), ssv (mainly by seeds), sv (both seeds and vegetative) and vvs (mainly vegetative)	[46]
Life span	Categorized in annuals, monocarpic perennials and polycarpic perennials	[46]
Life forms after Raunkiær	We only categorized Phanerophytes (incl. Nanophanerophytes and chamaephytes), Hemicryptophytes, Cryptophytes (geophytes and hydrophytes taken together) and Therophytes	[46, 61]
Strategies	CSR-strategy concept after Grime	[46, 49]
Ellenberg values for moisture, nitrogen and light		[46, 50]
Eco-sociological groups	Categorized in: coniferous and deciduous forests outside the floodplain (LNW), floodplain forests and alder carrs (BAW), small sedge communities of nutrient poor mires (SC), wet meadows (MO), agricultural grasslands (MA), reeds and tall herb fen communities (PH), communities of perennial ruderals and edges (AR), pioneer vegetation of mudbanks (BI), annual ruderals and arable weeds (SO), aquatic macrophytes (H).	[46, 52], own experiences

Table S2. Taxa of vascular plants and the entire number of propagules registered in the Traisen-river during the two sampling periods (2014 and 2017). Species considered to be fully or partly hydrochorous are marked bold.
