Table S1. Divided groups in the categorical meta-analysis of soil nutrient (soil organic carbon(g/kg), SOC; soil total nitrogen(g/kg), STN; microbial biomass carbon (C) and nitrogen (N)(mg/kg), MBC/N; available phosphorus and potassium (mg/kg), (AP/AK)) responses to different manure N SRs compared to mineral fertilizer.

Note: SOC, soil organic carbon; STN, soil total nitrogen; MBC, microbial biomass carbon; MBN, microbial biomass nitrogen; AP, available phosphorus; AK, available potassium. MF, mineral fertilizers; n=number of measurements; Means in a row followed by different letters are significantly different at $p < 0.05$.

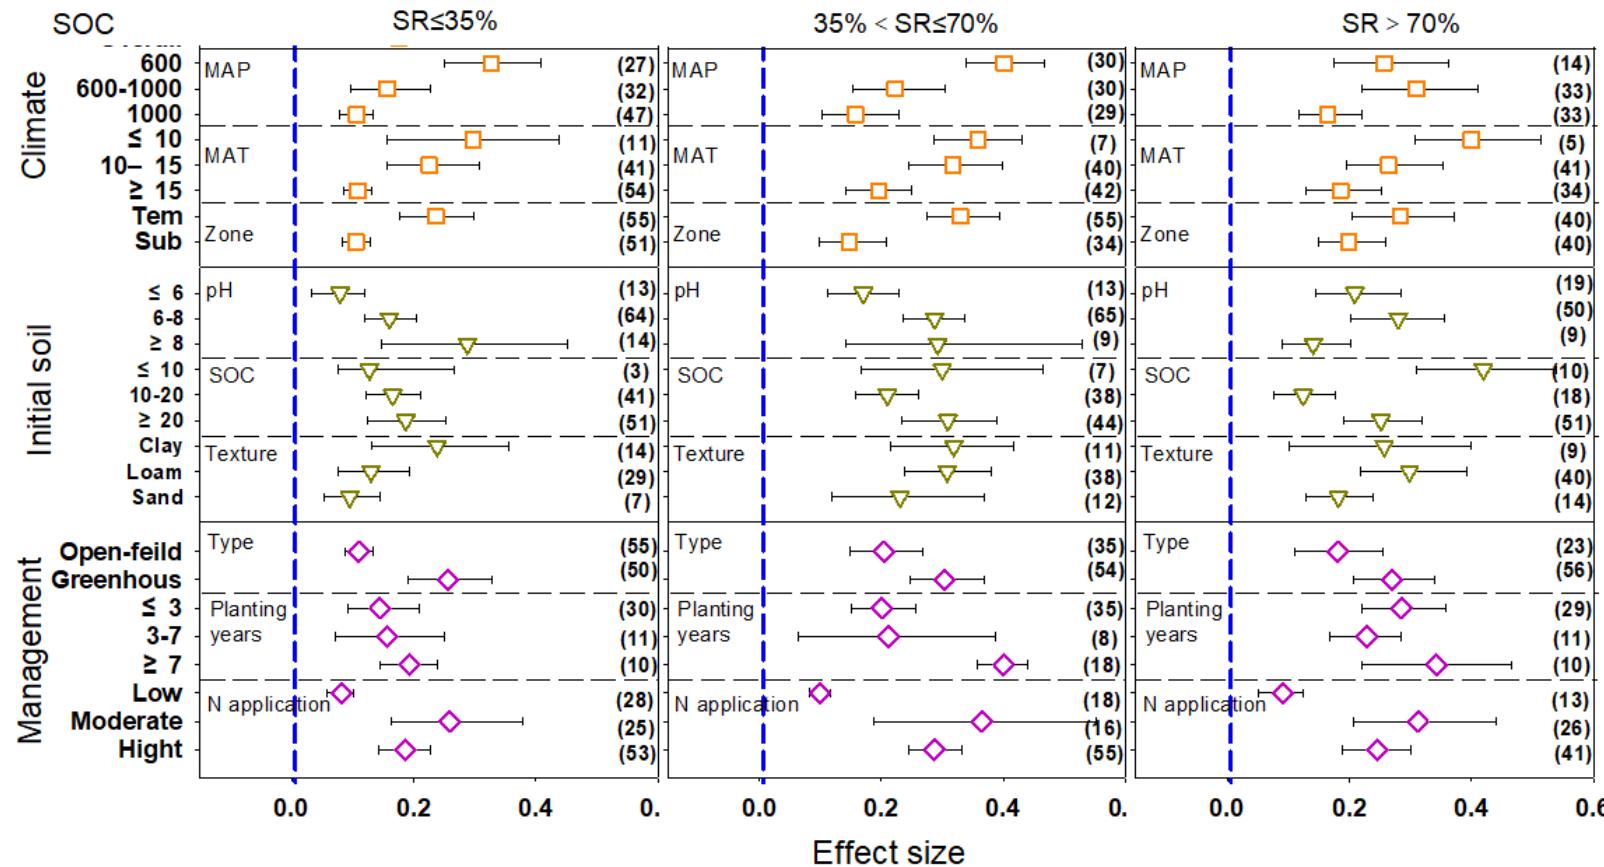

Figure S1. Effect of organic manure substitution ratios (SR) on soil organic carbon (SOC, g/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation (mm), MAT is mean annual temperature($^{\circ}\text{C}$); SOC, Soil organic carbon(g/kg). Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

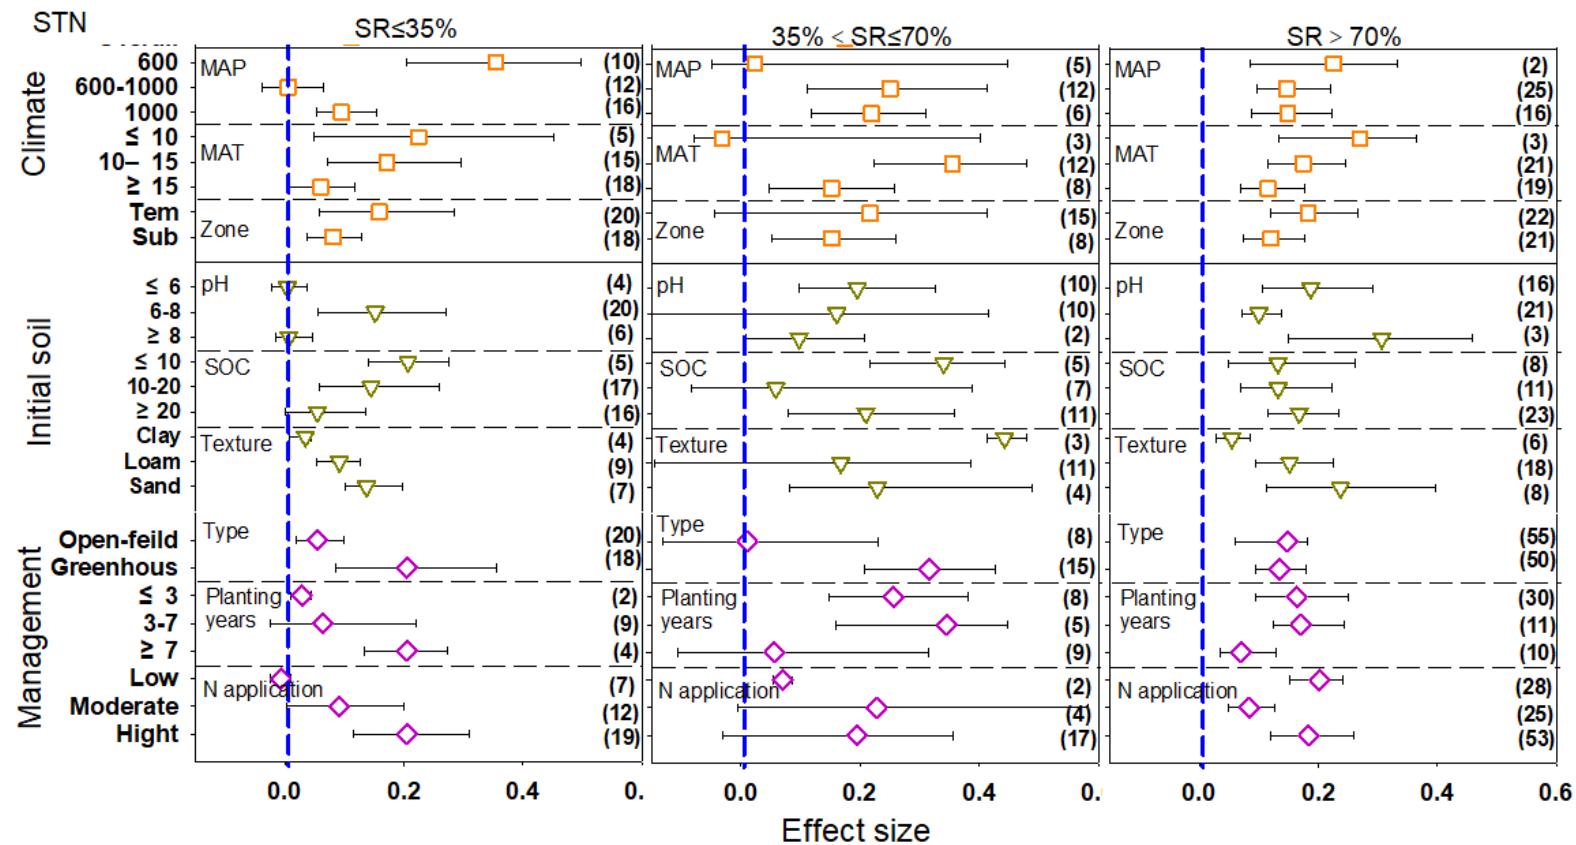

Figure S2. Effect of manure N substitution ratios (SR) on soil total nitrogen (STN, g/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature ($^{\circ}\text{C}$); SOC, Soil organic carbon(g/kg). Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

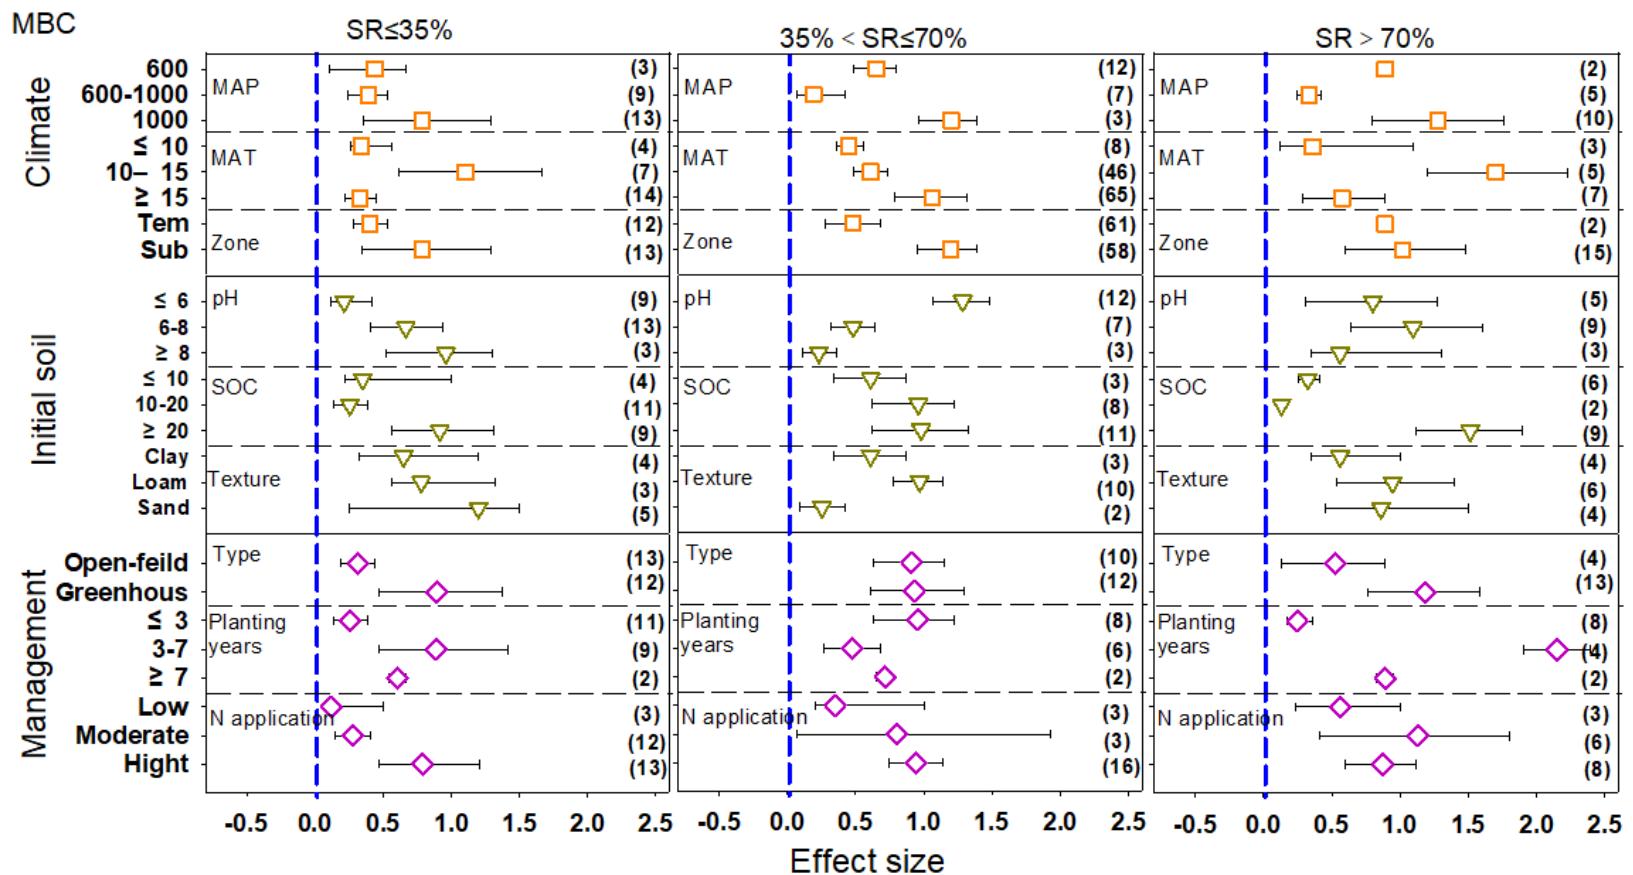

Figure S3. Effect of manure N substitution ratios (SR) on microbial biomass carbon (MBC, mg/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature(°C), SOC, Soil organic carbon(g/kg). Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

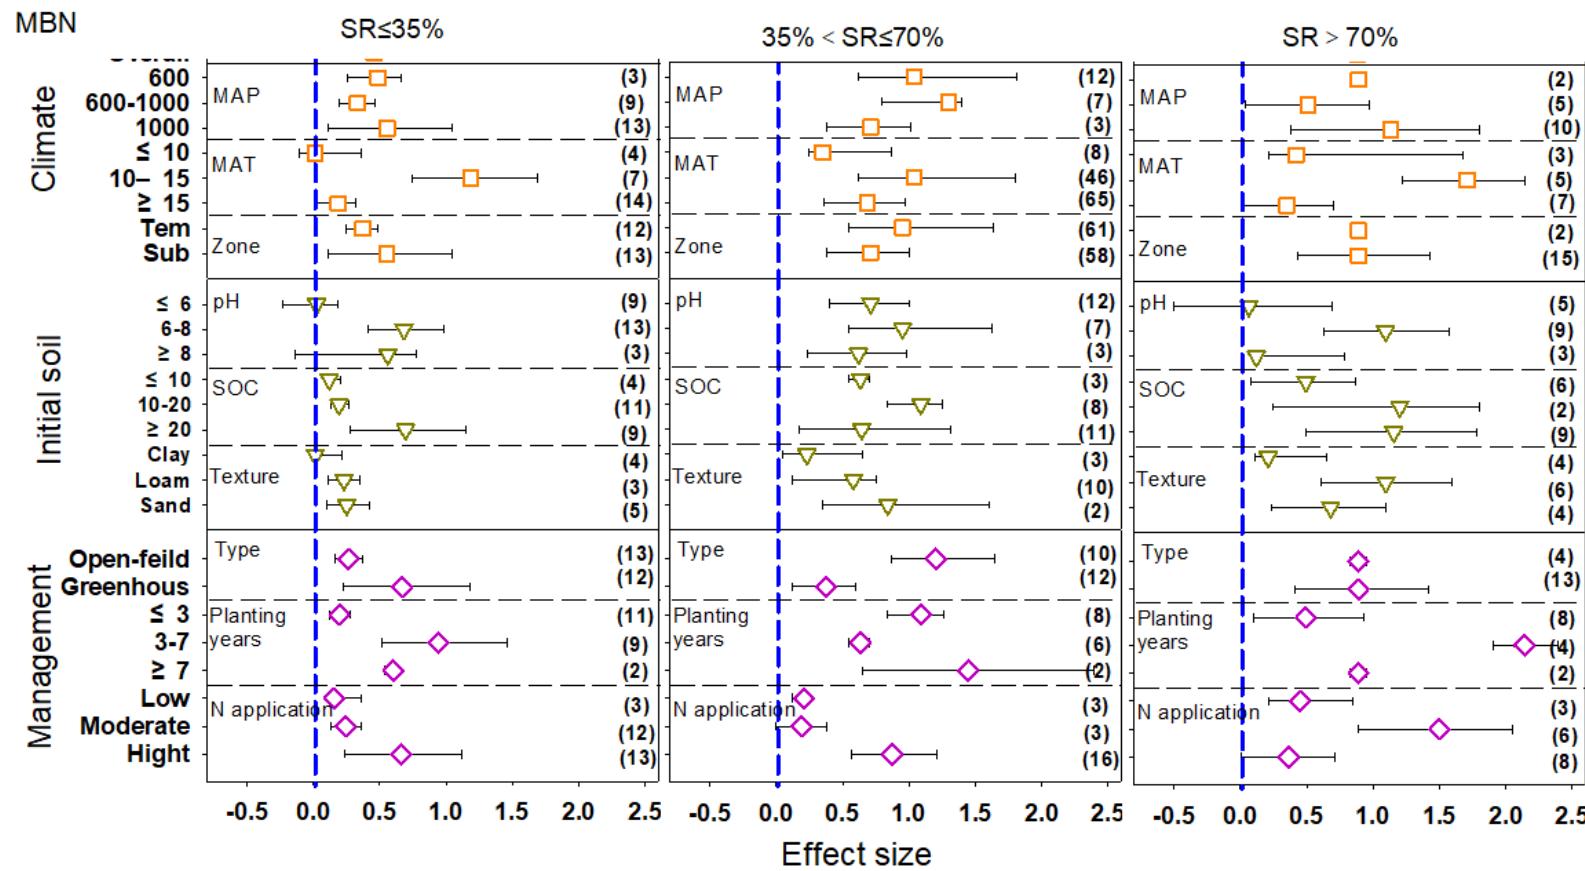

Figure S4. Effect of manure N substitution ratios (SR) on microbial biomass nitrogen (MBN, mg/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature($^{\circ}$ C), SOC, Soil organic carbon(g/kg). Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

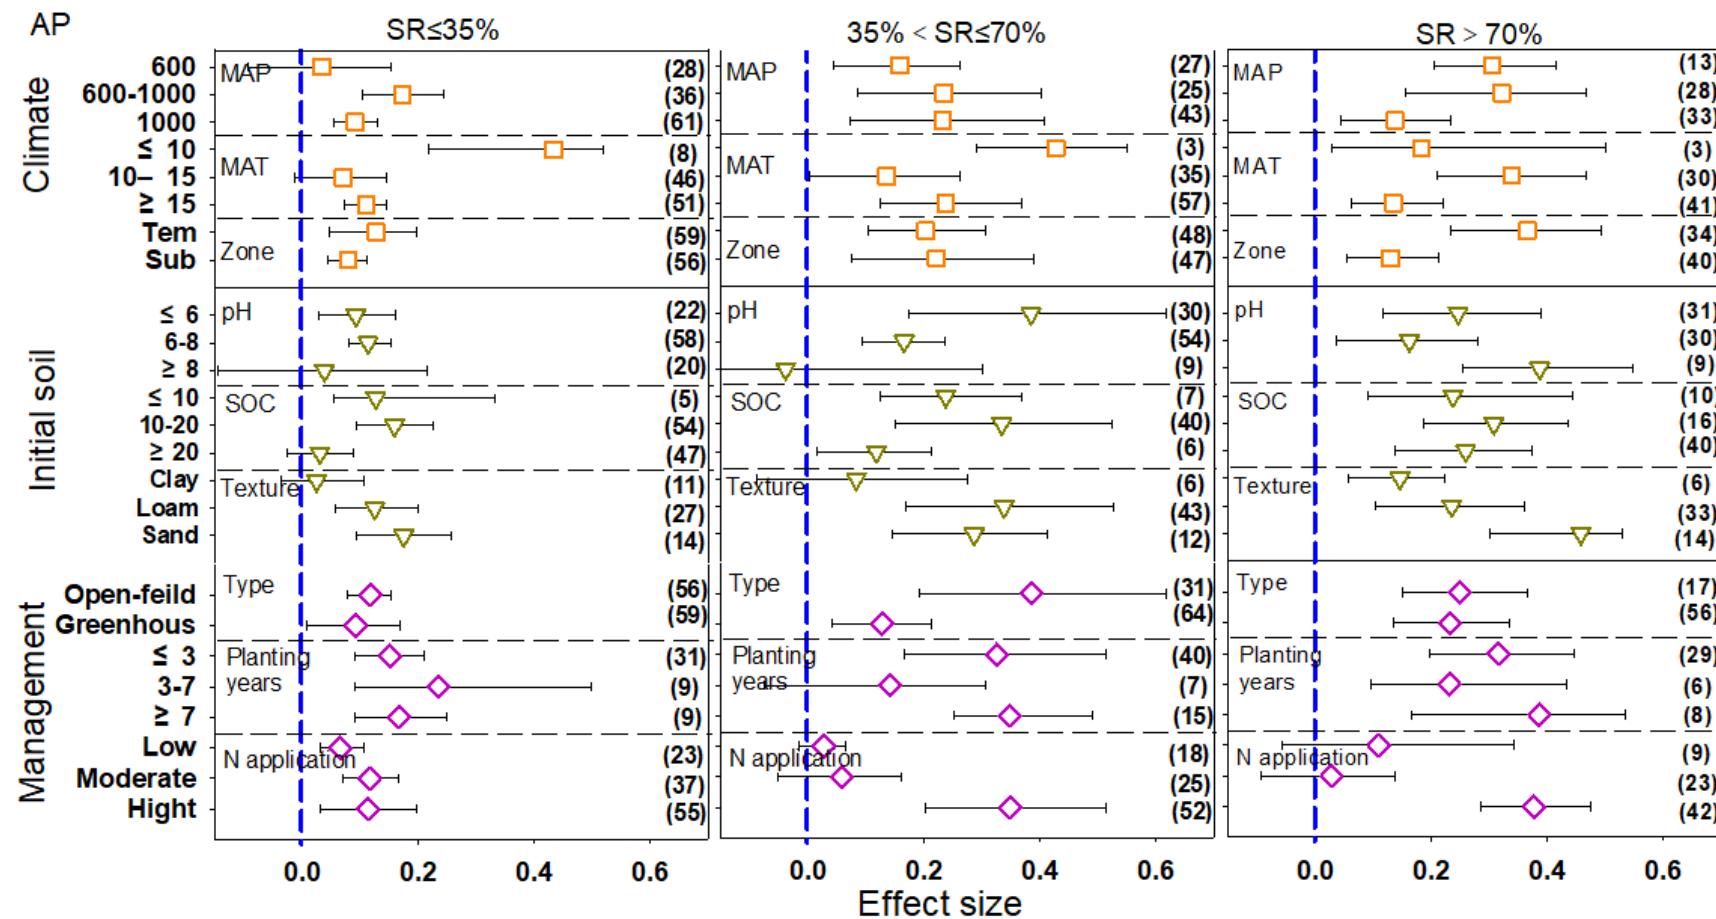

Figure S5. Effect of manure N substitution ratios (SR) on available phosphorus (AP, mg/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature(°C); SOC, Soil organic carbon(g/kg).Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

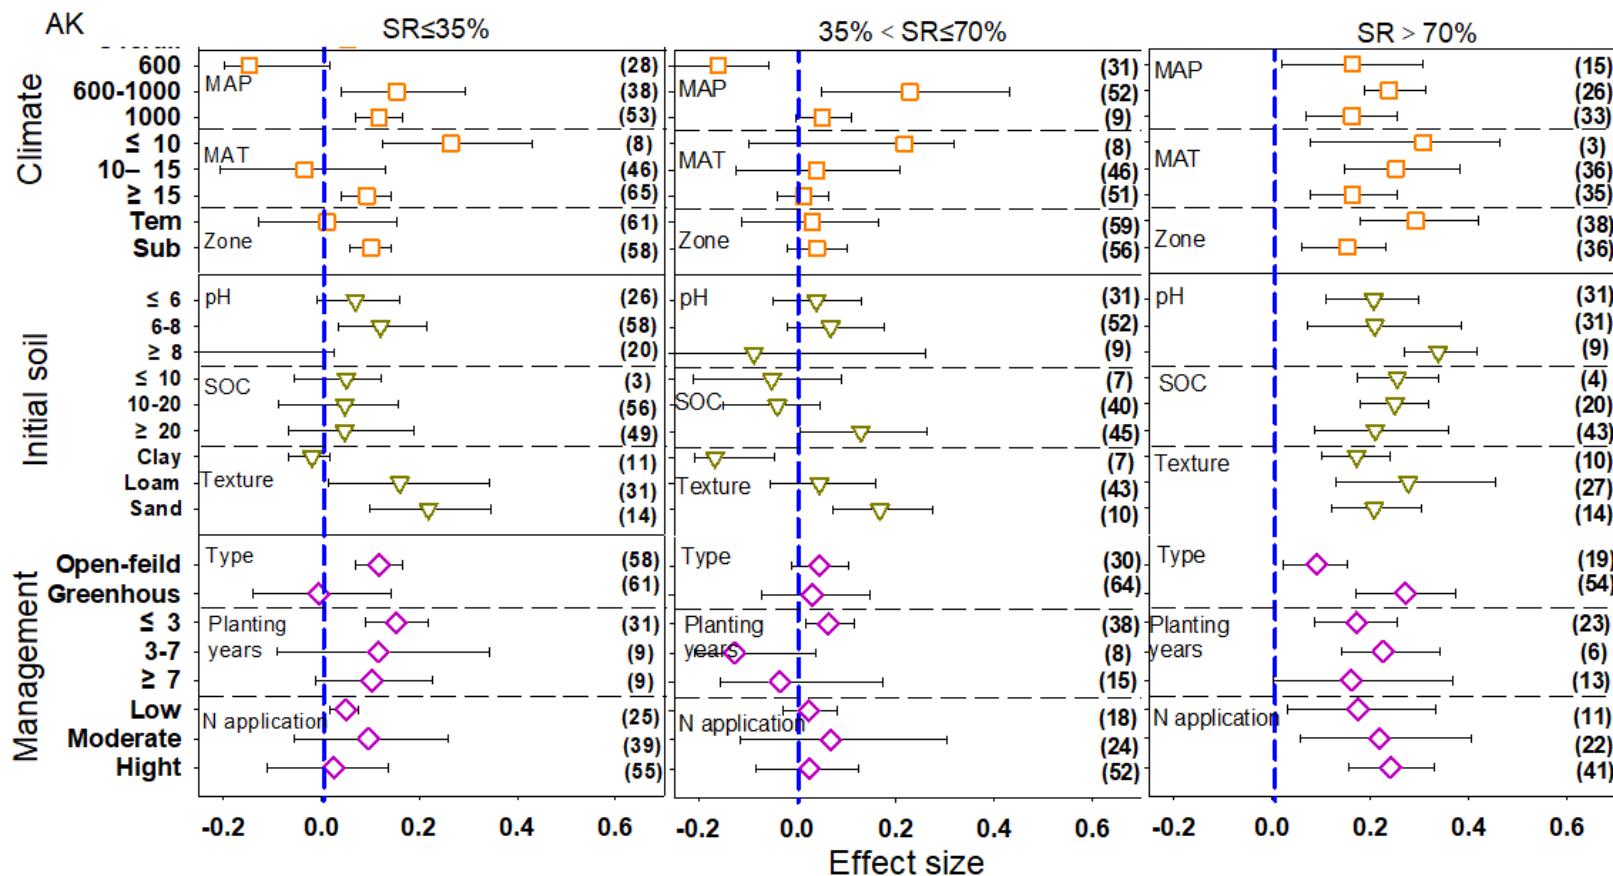

Figure S6. Effect of manure N substitution ratios (SR) on available potassium (AK, mg/kg) with different climatic conditions, initial soil properties, and management practices. Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature($^{\circ}$ C); SOC, Soil organic carbon(g/kg). Tem is temperate climate zone, Sub is subtropical climate zone, and Type is cultivation type. Dashed line indicates effect size = 0.

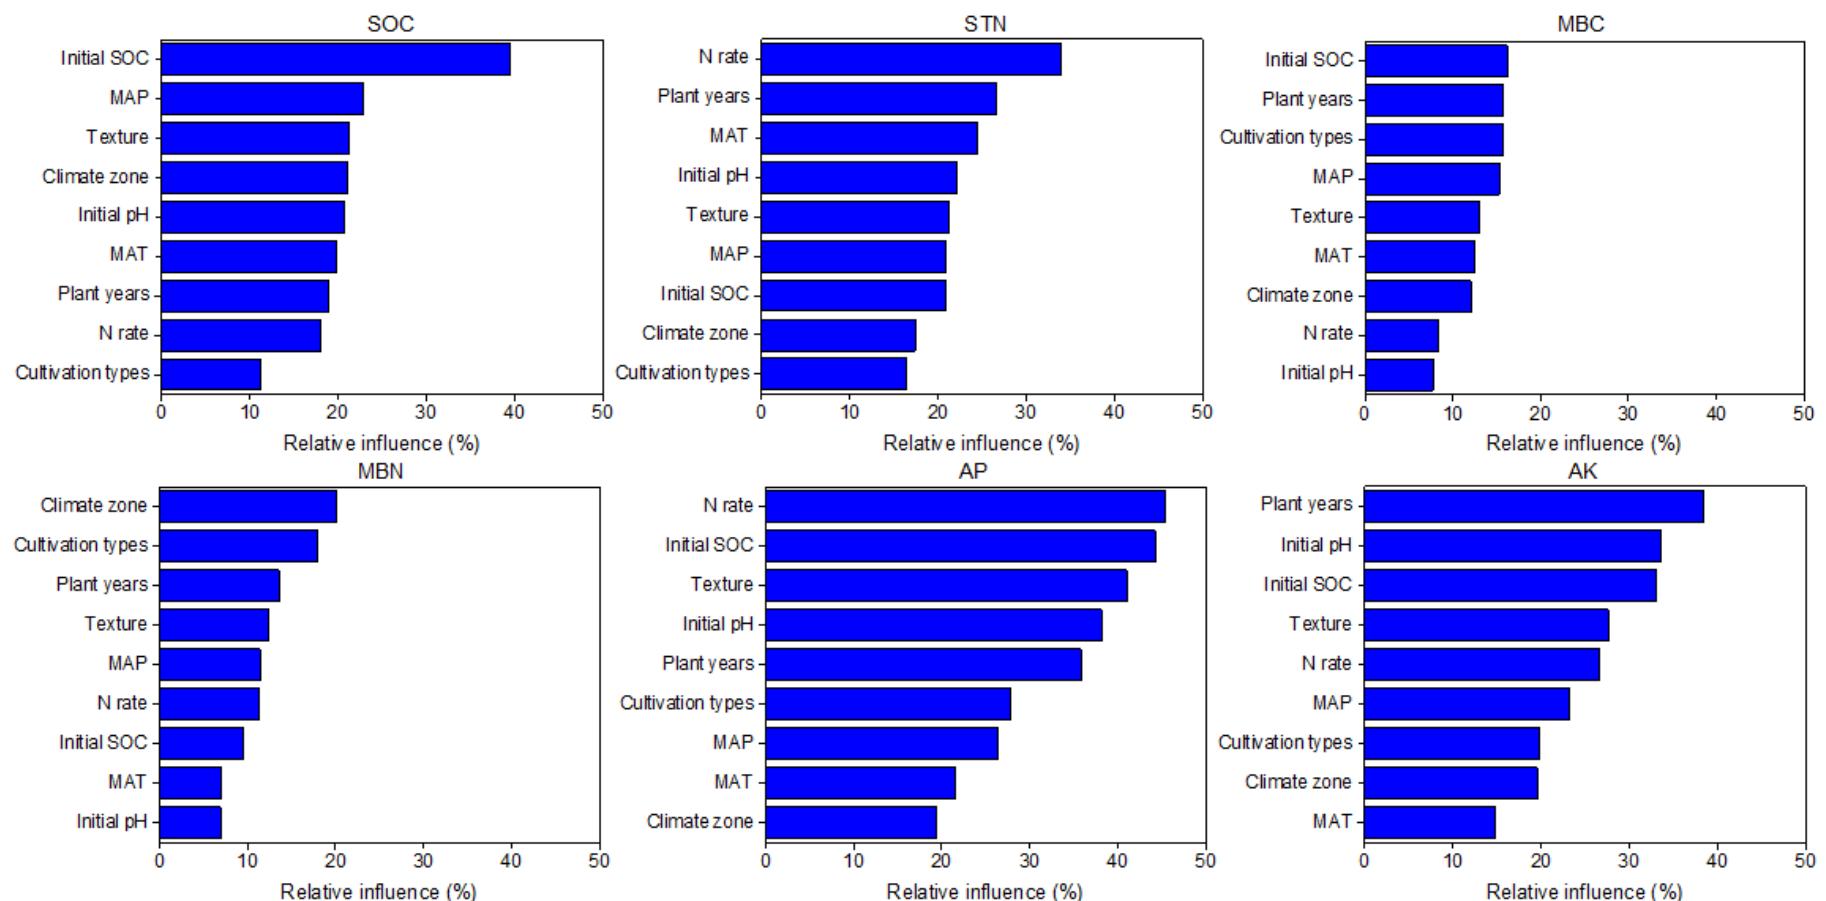

Figure S7. Relative influence of predictor variables on soil nutrients (SOC, Soil organic carbon(g/kg; STN, soil total N; MBC/MBN, microbial biomass C/N; AP, available phosphorus; AK, available potassium). Note: MAP is mean annual precipitation(mm), MAT is mean annual temperature($^{\circ}$ C).
