

In vivo antiphytoviral and aphid repellency activity of essential oils and hydrosols from *Foeniculum vulgare* and *Mentha suaveolens* to control zucchini yellow mosaic virus and its vector *Aphis gossypii*

Anna Taglienti ^{1*}, Livia Donati ¹, Immacolata Dragone ¹, Luca Ferretti ¹, Andrea Gentili ¹, Fabrizio Araniti ², Filippo Sapienza ³, Roberta Astolfi ³, Simona Fiorentino ⁴, Valerio Vecchiarelli ⁴, Claudia Papalini ⁵, Rino Ragno ³ and Sabrina Bertin ¹

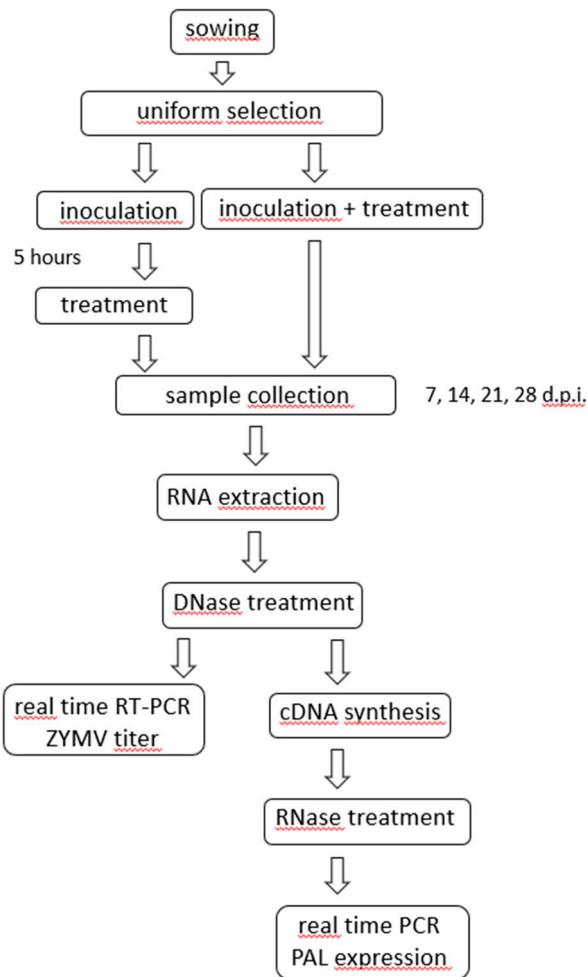

Figure S1. Flow diagram illustrating all treatments to plants and downstream analyses.

Table S1. Detailed chemical composition expressed as percentage of the Total Ion Current - TIC of EOs and HSs used in this study, as measured by GC-MS. Only compounds with relative abundance above 0.1% were reported. Retention index (RI) was calculated based on an alkane standard mixture (C8-C30), and values are expressed as a mean of three chromatographic replicate runs. MS EO = *M. suaveolens* essential oil, MS HS = *M. suaveolens* hydrosol, FV EO = *F. vulgare* essential oil, FV HS = *F. vulgare* hydrosol.

Component	Mean RI	MS EO	MS HS	FV EO	FV HS
Monoterpene hydrocarbons		21.13	-	26.91	6.02
