18 Supplementary Materials:

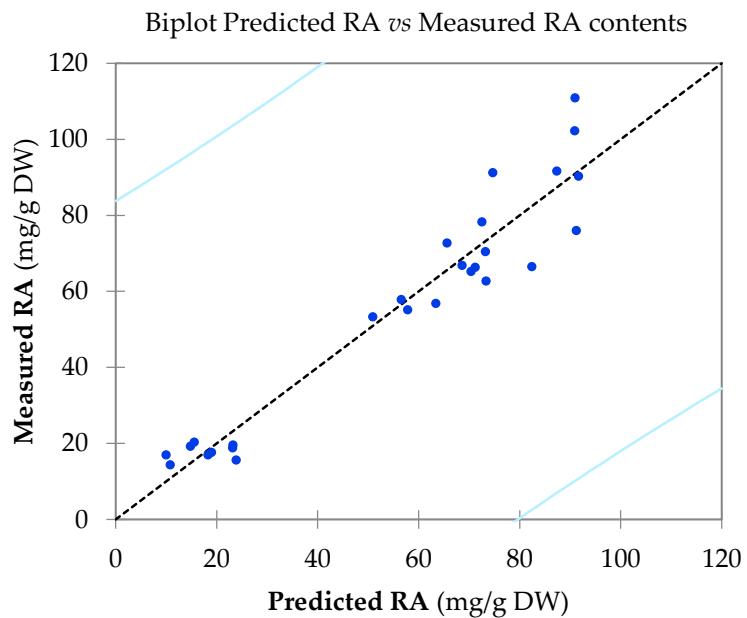

19 **Figure S1** Biplot representation of the linear relation between predicted vs measured RA contents in the 27
20 sample extracts. Light blue contours represented $p = 0.05$.

21 **Figure S2** Representative chromatogram of a complete HPLC analysis of an extract of *P. scutellarioides* leaves
22 obtained following USAE showing the presence of RA as main compound. *t*-RA: trans-RA (rosmarinic acid); IS:
23 internal standard (4-hydroxychalcone).

24 **Figure S3** Predicted surface response plots of the antioxidant activity (% of DPPH radical scavenging activity)
25 as a function of (a) ultrasound frequency and ethanol concentration, (b) extraction duration and ultrasound
26 frequency, and (c) extraction duration and ethanol concentration.

27 **Figure S4** Predicted surface response plots of the antimicrobial activity (% of *Staphylococcus aureus* ATCC6538
28 growth inhibition) as a function of (a) ultrasound frequency and ethanol concentration, (b) extraction duration
29 and ultrasound frequency, and (c) extraction duration and ethanol concentration.

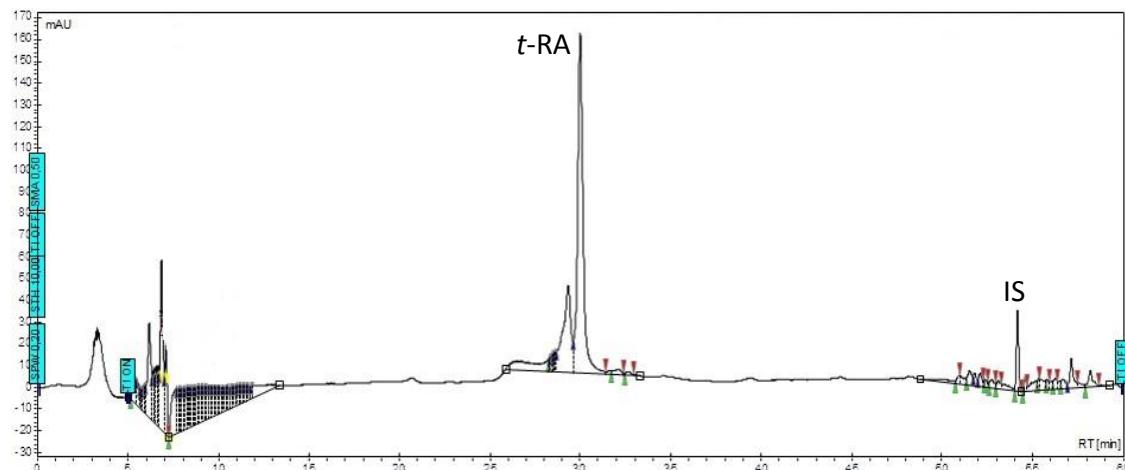

30 **Table S1** Individual antioxidant and antimicrobial activities vs RA contents in the 27 US extract samples.

37
38 **Figure S1** Biplot representation of the linear relation between predicted *vs* measured RA contents in
39 the 27 sample extracts. Light blue contours represented $p = 0.05$.

62 Values are means of 3 independent replicates; colors represent the relative activities or contents, from blue (for
 63 relative low activities or contents) to red (for relative high activities or contents); ¹ extraction conditions are
 64 described in Table 2; ² % of DPPH radical scavenging activity; ³ % of *Staphylococcus aureus* ATCC6538 growth
 65 inhibition.
