Supplementary Materials

Supplementary Table S1 The ANOVA results of tree species, N deposition level, and their interaction on biomass parameters of two-year-old seedlings of *Fraxinus mandshurica*, *Tilia amurensis* (both Angiosperms), *Pinus koraiensis* and *Larix gmelinii* (both Gymnosperms) in NE China at two treatments. Treatments are control (C; no additional nitrogen (N) deposition) and 10 g N m⁻² yr⁻¹ (Fert) additional N deposition. RMF; root mass fraction, SMF, stem mass fraction, LMF; leaf mass fraction, df degrees of freedom

Source of variation	df	Plant biomass	RMF	SMF	LMF	Root: shoot
Species (Spec)	3	<0.001	<0.001	<0.001	<0.001	<0.001
N deposition	1	0.001	0.001	0.387	0.001	0.001
Spec × N	3	0.289	0.160	0.045	0.048	0.270

P-values in the bold indicates significant effects

Supplementary Table S2 Plant biomass and its distribution to organs of two-year-old seedlings of *Fraxinus mandshurica*, *Tilia amurensis*, *Pinus koraiensis*, and *Larix gmelinii* at control (C; no additional nitrogen (N) deposition) and after 10 g N m⁻² yr⁻¹ (Fert) additional N deposition in NE China. See Supplementary Table 1 for 2-way ANOVA results; significant differences between N deposition levels per species are indicated by different lower-case letters (Tukey's HSD post hoc; $P < 0.05$; mean $\pm$ SE); root mass fraction (RMF), stem mass fraction (SMF), leaf mass fraction (LMF)

Species	N deposition level	Plant biomass (g)	RMF	SMF	LMF	Root: shoot
<i>F. mandshurica</i>	C	32.1 $\pm$ 2.26 a	0.44 $\pm$ 0.03 a	0.22 $\pm$ 0.01 a	0.34 $\pm$ 0.03 a	0.80 $\pm$ 0.08 a

Note: The different letters in the same line indicate significant differences among the N deposition levels ($P < 0.05$)

Supplementary Figure S1 Increase in plant height (cm; Jun–Sept. 2018) in *Fraxinus mandshurica* (a), *Tilia amurensis* (b), *Pinus koraiensis* (c), and *Larix gmelinii* (d) at control (C; no additional nitrogen (N) supply; black bars) and after $10 \text{ g N m}^{-2} \text{ yr}^{-1}$ (Fert; grey bars) additional N deposition in NE China. Within species, significant differences between N deposition levels are indicated by different lower-case letters (Tukey's HSD post hoc; $P < 0.05$; mean $\pm$ SE)

Supplementary Figure S2 Increase in collar diameter (cm; Jun-Sept. 2018) in *Fraxinus mandshurica* (a), *Tilia amurensis* (b), *Pinus koraiensis* (c), and *Larix gmelinii* (d) at control (C; no additional nitrogen (N) supply; black bars) and after $10 \text{ g N m}^{-2} \text{ yr}^{-1}$ (Fert; grey bars) additional N deposition in NE China. Within species, significant differences between N deposition levels are indicated by different lower-case letters (Tukey's HSD post hoc; $P < 0.05$; mean $\pm$ SE)

Supplementary Table S3 Pearson’s correlation coefficients of leaf morphological and anatomical traits and biomass growth /parameters of two-year-old saplings of angiosperms (*Fraxinus mandshurica*, *Tilia amurensis*) at control (C; no additional deposition) and after 10 g N m^{−2} yr^{−1} (Fert) additional nitrogen deposition in NE China. Abbreviations: leaf mass per area (LMA), leaf thickness (LT), leaf density measured (LD_{DM/LV}), conduit diameter (CD), vascular bundle diameter (VBD), palisade mesophyll thickness (PMT), spongy mesophyll thickness (SMT), adaxial epidermis (ADE), abaxial epidermis (ABE), stomata pore length (SL), root mass fraction (RMF), stem mass fraction (SMF), and leaf mass fraction (LMF)
