#### TABLE OF CONTENTS

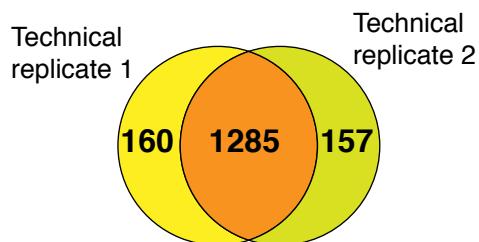

Item	Description	Page
Table S1	HDMS <sup>E</sup> yielded more protein identifications than MS <sup>E</sup> for unfractionated <i>Arabidopsis</i> root protein lysates.	2
Figure S1	Technical replicates for the UPLC-HDMSE protocol using unfractionated protein lysates.	2
Table S2	Pearson correlation table for biological and technical replicates.	2
Table S3	Protein abundances at 8, 12, and 24 hours (A=auxin-treated, C=control).	3
Table S4	Proteins Identified and Matched to Cell Wall Proteins Based Upon Protein Interactions. Includes STRING-based protein interactions.	7

**PRIDE Identifier:** PXD001400 Effects of exogenous auxin on the *Arabidopsis thaliana* root proteome at 8, 12, and 24 hours post-treatment.

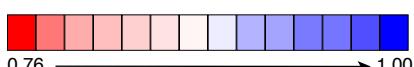

**Table S1.** Comparision of protein identifications between MS<sup>E</sup> and HDMSE using PLGS 3.0 under constant loading level, differing gradient lengths, and differing flow rates.

Loading	Gradient length (min)	Flow rate ( $\mu\text{L}/\text{min}$ )	MSE Protein IDs	HDMSE Protein IDs
1 $\mu\text{g}$	100	50	393	866
1 $\mu\text{g}$	160	50	400	872
1 $\mu\text{g}$	200	50	254	792
1 $\mu\text{g}$	100	20	278	632
1 $\mu\text{g}$	160	20	345	624
1 $\mu\text{g}$	200	20	116	785

**Figure S1.** Comparison of the reproducibility of unfractionated technical replicates at the level of protein identifications using DIA-MS (HDMSE mode).

AT3G09440.1	O65719 (HSP7C_ARATH)	Heat shock 70kDa protein 3	21	21.73

STRING Analyses of the proteins listed above.

Szklarczyk D, Franceschini A, Wyder S, Forslund K, Heller D, Huerta-Cepas J, Simonovic M, Roth A, Santos A, Tsafou KP, Kuhn M, Bork P, Jensen LJ, von Mering C. STRING v10: protein-protein interaction networks, integrated over the tree of life. Nucleic Acids Res. **43** [2015] D447-452.

**AT3G22845 emp24/gp25L/p24 family/GOLD domain-containing protein;** Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway but also in post-Golgi membranes. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity) (214 aa)

**AT1G26690 emp24/gp25L/p24 family/GOLD domain-containing protein;** Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity) (214 aa); **SCORE: 0.999**

**AT3G29070 emp24/gp25L/p24 family/GOLD domain-containing protein;** Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity) (225 aa); **SCORE: 0.987**

**AT2G03040 emp24/gp25L/p24 family/GOLD domain-containing protein (166 aa);** **SCORE: 0.987**

**AT3G01340 transducin/WD-40 repeat-containing protein (302 aa);** **SCORE: 0.974**

**AT2G30050 protein transport protein SEC13 (302 aa);** **SCORE: 0.974**

**AT1G69460 emp24/gp25L/p24 family/GOLD domain-containing protein;** Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity) (214 aa); **SCORE: 0.952**

**p24delta5** p24 subfamily delta 5; Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity). Interacts with p24beta2 at endoplasmic reticulum export sites for endoplasmic reticulum exit and coupled transport to the Golgi apparatus. Once in the Golgi, interacts very efficiently with the COPI machinery for retrograde transport back to the endoplasmic reticulum (216 aa); **SCORE: 0.944**

**AT4G34450** coatomer subunit gamma; The coatomer is a cytosolic protein complex that binds to dilysine motifs and reversibly associates with Golgi non-clathrin-coated vesicles, which further mediate biosynthetic protein transport from the ER, via the Golgi up to the trans Golgi network. Coatomer complex is required for budding from Golgi membranes, and is essential for the retrograde Golgi-to-ER transport of dilysine-tagged proteins (By similarity) (886 aa); **SCORE: 0.931**

**AT2G16200** coatomer gamma subunit appendage-domain-containing protein (83 aa); **SCORE: 0.931**

**AT1G57620 emp24/gp25L/p24 family/GOLD domain-containing protein;** Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway. Thought to act as cargo receptor at the luminal side for incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle coat formation at the cytoplasmic side (By similarity) (212 aa); **SCORE: 0.920**

**AKR2: ankyrin repeat-containing protein 2;** Seems to be involved in the regulation of hydrogen peroxide levels during biotic and abiotic stresses by optimizing the ascorbate peroxidase 3 (APX3) hydrogen peroxide-degrading activity. This regulation might be monitored by GRF6 (350 aa)

**APX3** L-ascorbate peroxidase; Plays a key role in hydrogen peroxide removal (By similarity) (287 aa); **SCORE: 0.997**

**OEP7** outer envelope membrane protein 7 (64 aa); **SCORE: 0.996**

**TOC33** translocase of chloroplast 33; GTPase involved in protein precursor import into chloroplasts. Seems to recognize chloroplast-destined precursor proteins and regulate their presentation to the translocation channel through GTP hydrolysis. Binds GTP, GDP, XTP, but not ATP. Probably specialized in the import of nuclear encoded photosynthetic preproteins from the cytoplasm to the chloroplast, especially during early development stages (297 aa); **SCORE: 0.989**

**TOC34** translocase of chloroplast 34; GTPase involved in protein precursor import into chloroplasts. Seems to recognize chloroplast-destined precursor proteins and regulate their presentation to the translocation channel through GTP hydrolysis. Probably specialized in the import of nuclear encoded non-photosynthetic preproteins from the cytoplasm to the chloroplast (313 aa); **SCORE: 0.988**

**TOC64-III** translocon at the outer membrane of chloroplasts 64-III; Chaperone receptor mediating Hsp90-dependent protein targeting to chloroplasts. Bi-functional preprotein receptor acting on both sides of the membrane. Not essential for an efficient import of pre-proteins into plastids (589 aa); **SCORE: 0.946**

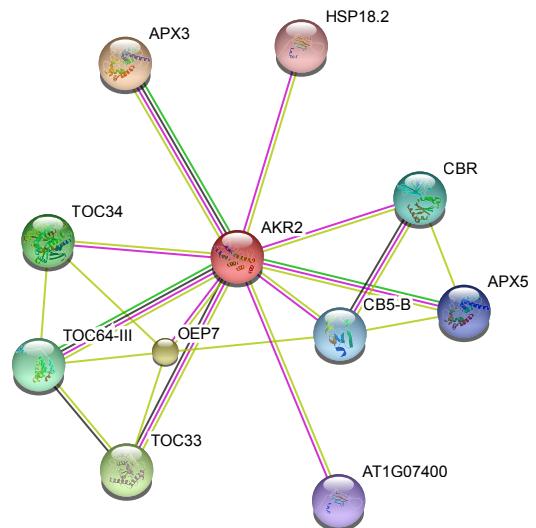

**CBR** cytochrome-b5 reductase; Reductase transferring electrons from NADH to cytochrome b5. Required for the NADH-dependent electron transfer involved in the desaturation and hydroxylation of fatty acids and in the desaturation of sterol precursors. No activity with NADPH as electron donor (281 aa); **SCORE: 0.939**

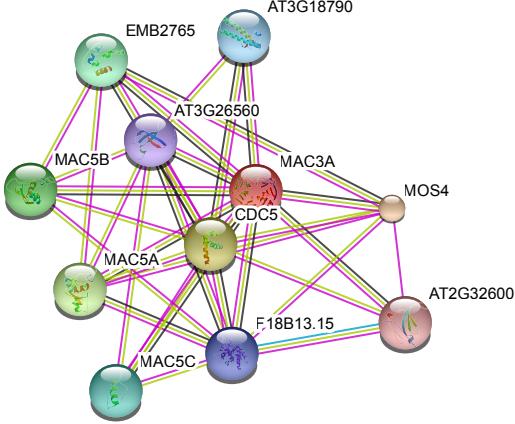

**CB5-B** cytochrome B5 isoform B; Membrane bound hemoprotein which function as an electron carrier for several membrane bound oxygenases, including fatty acid desaturases (134 aa); **SCORE: 0.931**

**APX5** L-ascorbate peroxidase; Plays a key role in hydrogen peroxide removal (By similarity) (279 aa); **SCORE: 0.930**

**AT1G07400** class I heat shock protein (157 aa); **SCORE: 0.866**

**HSP18.2** heat shock protein 18.2 (161 aa); **SCORE: 0.795**

**MAC3A** MOS4-associated complex 3A; Component of the MAC complex that probably regulates defense responses through transcriptional control and thereby is essential for plant innate immunity. Functions as U-box E3 ubiquitin-protein ligase (By similarity). May also serve as a support for spliceosome binding and activity (By similarity) (523 aa)

**MOS4** Modifier of snc1.4; Component of the MAC complex that probably regulates defense responses through transcriptional control and thereby is essential for plant innate immunity. Involved in mRNA splicing (By similarity) (253 aa); **SCORE: 0.999**

**CDC5** cell division cycle 5; Component of the MAC complex that probably regulates defense responses through transcriptional control and thereby is essential for plant innate immunity. Possesses a sequence specific DNA sequence 'CTCAGCG' binding activity. Involved in mRNA splicing and cell cycle control (By similarity) (844 aa); **SCORE: 0.999**

**MAC5A** MOS4-associated complex subunit 5A (481 aa); **SCORE: 0.997**

**MAC5B** MOS4-associated complex subunit 5B (483 aa); **SCORE: 0.997**

**EMB2765** EMBRYO DEFECTIVE 2765 (1509 aa); **SCORE: 0.993**

**MAC5C** MOS4-associated complex subunit 5C (363 aa); **SCORE: 0.993**

**AT3G18790** pre-mRNA-splicing factor ISY1 (300 aa); **SCORE: 0.992**

**F18B13.15** ABNORMAL SUSPENSOR 2 (2359 aa); **SCORE: 0.991**

**AT3G26560** ATP-dependent RNA helicase DHX8/PRP22; Could act late in the splicing of pre-mRNA and mediate the release of the spliced mRNA from spliceosomes (By similarity) (1168 aa); **SCORE: 0.986**

**AT2G32600** splicing factor 3A subunit 2 (277 aa); **SCORE: 0.984**

**PDIL2-1**, Protein disulfide-isomerase like 2-1, also referred to as UNE5 UNFERTILIZED EMBRYO SAC 5; Protein disulfide isomerase that may be required for proper pollen development, ovule fertilization and embryo development (361 aa)

**CRT1b** calreticulin-2; Molecular calcium-binding chaperone promoting folding, oligomeric assembly and quality control in the ER via the calreticulin/calnexin cycle. This lectin may interact transiently with almost all of the monoglycosylated glycoproteins that are synthesized in the ER (By similarity) (424 aa); **SCORE: 0.991**

**CNX1** calnexin 1; Calcium-binding protein that interacts with newly synthesized glycoproteins in the endoplasmic reticulum. It may act in assisting protein assembly and/or in the retention within the ER of unassembled protein subunits. It seems to play a major role in the quality control apparatus of the ER by the retention of incorrectly folded proteins (By similarity) (530 aa); **SCORE: 0.989**

**GLU2** glutamate synthase 2; May play a role in primary nitrogen assimilation in roots. Could supply a constitutive level of glutamate to maintain a basal level of protein synthesis (1629 aa); **SCORE: 0.978**

**GLT1** glutamate synthase 1 [NADH]; Involved in glutamate biosynthesis. Required for non- photorespiratory ammonium assimilation. Probably involved in primary ammonium assimilation in roots (2208 aa); **SCORE: 0.978**

**GLU1** glutamate synthase 1; Involved in glutamate biosynthesis in leaf. Required for the reassimilation of ammonium ions generated during photorespiration (1648 aa); **SCORE: 0.976**

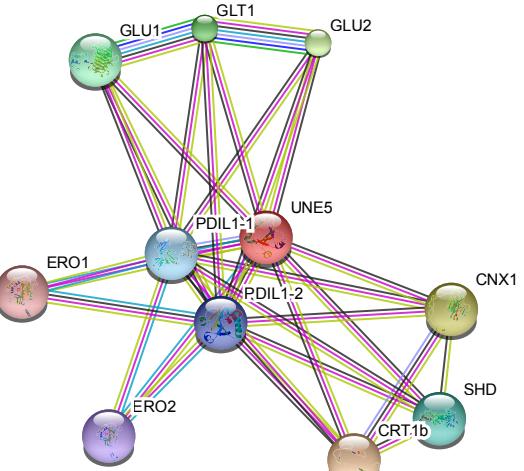

**SHD SHEPHERD**; May have a molecular chaperone role in the processing of secreted materials. Required for shoot apical meristem (SAM), root apical meristem (RAM) and floral meristem (FM) formation, probably by regulating the folding of CLAVATA proteins (CLVs). Also involved in pollen tube elongation (823 aa); **SCORE: 0.973**

**PDIL1-1** PDI-like 1-1; Protein disulfide isomerase that associates with RD21A protease for trafficking from the ER through the Golgi to lytic and protein storage vacuoles of endothelial cells in developing seeds. Regulates the timing of programmed cell death (PCD) of the endothelial cells by chaperoning and inhibiting cysteine proteases during their trafficking to vacuoles (501 aa); **SCORE: 0.972**

**PDIL1-2** PDI-like 1-2; Acts as a protein-folding catalyst that interacts with nascent polypeptides to catalyze the formation, isomerization, and reduction or oxidation of disulfide bonds (By similarity) (508 aa); **SCORE: 0.965**

**ERO2** endoplasmic oxidoreductin-2; Essential oxidoreductase that oxidizes proteins in the endoplasmic reticulum to produce disulfide bonds. Acts by oxidizing directly PDI isomerase through a direct disulfide exchange. Does not act as a direct oxidant of folding substrate, but relies on PDI to transfer oxidizing equivalent. Does not oxidize all PDI related proteins, suggesting that it can discriminate between PDI and related proteins. Its reoxidation probably involves electron transfer to molecular oxygen via FAD. Acts independently of glutathione. May be responsible for a significant proportion [...] (479 aa); **SCORE: 0.949**

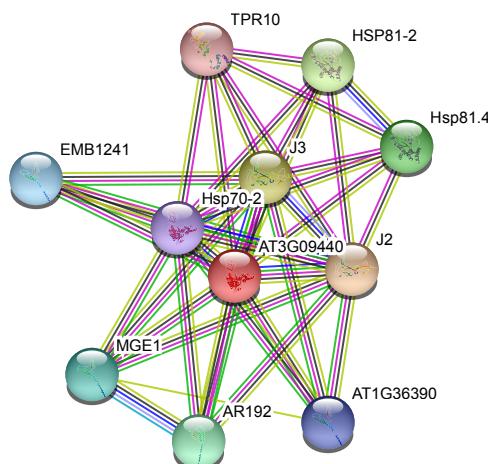

**ERO1** endoplasmic oxidoreductin-1; Essential oxidoreductase that oxidizes proteins in the endoplasmic reticulum to produce disulfide bonds. Acts by oxidizing directly PDI isomerase through a direct disulfide exchange. Does not act as a direct oxidant of folding substrate, but relies on PDI to transfer oxidizing equivalent. Does not oxidize all PDI related proteins, suggesting that it can discriminate between PDI and related proteins. Its reoxidation probably involves electron transfer to molecular oxygen via FAD. Acts independently of glutathione. May be responsible for a significant proportion [...] (469 aa); **SCORE: 0.949**

**AT3G09440** protein heat shock protein 70-3; In cooperation with other chaperones, Hsp70s stabilize preexisting proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage (By similarity) (649 aa)

**J2** DNAJ homologue 2; Have a continuous role in plant development probably in the structural organization of compartments (By similarity) (419 aa); **SCORE: 0.998**

**J3** chaperone protein dnaJ 3; Have a continuous role in plant development probably in the structural organization of compartments (By similarity) (420 aa); **SCORE: 0.996**

**HSP81-2** heat shock protein 81-2; Molecular chaperone involved in RPM1-mediated resistance. Component of the RPM1/RAR1/Sgt1 complex. May stabilize RPM1 and protect it from SGT1-mediated degradation. Associates with RAR1 which may function as co-chaperone. Possesses ATPase activity (728 aa); **SCORE: 0.994**

**Hsp81.4** HEAT SHOCK PROTEIN 81.4; Molecular chaperone. Due to its association with certain proteins such as hormone receptors and some classes of kinases, it is implicated in signal transduction and development. Has ATPase activity (By similarity) (699 aa); **SCORE: 0.994**

**AR192** molecular chaperone grpE; Essential component of the PAM complex, a complex required for the translocation of transit peptide-containing proteins from the inner membrane into the mitochondrial matrix in an ATP-dependent manner (By similarity) (327 aa); **SCORE: 0.994**

**MGE1** mitochondrial GrpE 1; Essential component of the PAM complex, a complex required for the translocation of transit peptide-containing proteins from the inner membrane into the mitochondrial matrix in an ATP-dependent manner (By similarity) (302 aa); **SCORE: 0.993**

**EMB1241** embryo defective 1241; Essential component of the PAM complex, a complex required for the translocation of transit peptide-containing proteins from the inner membrane into the mitochondrial matrix in an ATP-dependent manner (By similarity) (326 aa); **SCORE: 0.993**

**AT1G36390** co-chaperone grpE-like protein; Essential component of the PAM complex, a complex required for the translocation of transit peptide-containing proteins from the inner membrane into the mitochondrial matrix in an ATP-dependent manner (By similarity) (279 aa); **SCORE: 0.993**

**Hsp70-2** heat shock protein 70; Component of the Mediator complex, a coactivator involved in the regulated transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene-specific regulatory proteins to the basal RNA polymerase II transcription machinery. The Mediator complex, having a compact conformation in its free form, is recruited to promoters by direct interactions with regulatory proteins and serves for the assembly of a functional preinitiation complex with RNA polymerase II and the general transcription factors (By similarity) (653 aa); **SCORE: 0.987**

**TPR10** tetratricopeptide repeat 10 (680 aa); **SCORE: 0.986**
