Matlab functions *diopha21_1* and *diopha21_2* find all the solutions to the Diophantine systems of equations and inequalities (17), (21) and (18), (22) respectively for 9 and 13 integer-valued parameters. Below is the Matlab code for the more cumbrous *diopha21_2* (Colony II), the reduction to Colony I being obvious.

```
function [Pars, Lams] = diopha21_2
% finds all the solutions of the Diophantine system of equations&inequalities
% Colony 2 without excavation; hierarchy (6C) among parent Contributions
% reproductive-core 6x6 submatrix Lcor only (size L2 = 14x14)
% Output variables: Lams, vector of 2 λ1s extremal values over the set of solutions;
% Pars, 13x2 matrix of extremal parameters.
% @ Logofet 26.04.2021.
global ns % assign also in workspace
ns = 0;%number of solutions
Lcor=[0, 0, 0, 0, 0, 0;
      18/61, 0, 0, 0, 0, 0;
      0, 0, 0, 0, 0, 0;
      14/61, 0, 2/3, 0, 0, 0;
```

```
