

**(A)****(B)****(C)**

Figure S1. cDNA microarray results of CSC markers in sh-control, sh-IFIT2-1, and sh-IFIT2-2 cells. (A) Enhanced CD44 and ABCG2 and (B) Reduced CD24 were observed in sh-IFIT2-1 and sh-IFIT2-2 cells compared to sh-control cells. (C) Other CSC markers were not significantly different between IFIT2 knockdown and control cells. Each line represents an array probe.
