

Figure S1. Scanned Immunome microarray. The microarrays including the four on-slide replicates containing a total of more than 1600 proteins in quadruplicates.

Figure S2. General intensity of rheumatoid arthritis and healthy donor plasma. The average intensity of all proteins included on the microarrays after the addition of anti-CCP positive or anti-CCP negative rheumatoid arthritis plasma or healthy donor plasma. It also demonstrates the average intensity of the top 10% most intense targets on each slide, demonstrating the general intensity across each population of patients.
