Supplementary table 1. Antibody details for flow cytometric analysis of joint aspirates.

Cell population	Parent population	Cell population	Parent population
B cells	non-granulocytes	NK cells	non-granulocytes
CD3 ⁺ cells	non-granulocytes	Monocytes	non-granulocytes
T _h cells	non-granulocytes	mMDSC	non-granulocytes
T _h cells	CD3 ⁺ cells	all DCs	non-granulocytes
T _h cells	T _h and T _k cells	mDC	non-granulocytes
T _k cells	non-granulocytes	mDC	all DCs
T _k cells	CD3 ⁺ cells	pDCs	non-granulocytes
T _k cells	T _h and T _k cells	pDCs	all DCs
T _h and T _k cells	non-granulocytes	Neutrophils	all granulocytes
T _h and T _k cells	CD3 ⁺ cells	Eosinophils	all granulocytes
NKT cells	non-granulocytes	Basophils	all granulocytes
NKT cells	CD3 ⁺ cells		

Supplementary table 2. Flow cytometric parameters which were used for estimation of the mean misclassification error for different classification methods.

Supplementary figure 1. Estimation of the mean misclassification errors for 5 classification methods. The mean misclassification errors (mmce) for the five classification methods and 24 predictor variables (ksvm: Support Vector Machines, rpart: Decision Tree, lda: Linear Discriminant Analysis, randomForest: Random Forest, ctree: Conditional Inference Trees) are depicted as violin plots for all resampling iterations. Resampling strategy: 10-fold cross-validation. Each point represents an iteration.
