

## SUPPLEMENTARY MATERIAL

**Table 1.** Detailed characteristics of studies included in the qualitative synthesis.

Trial ID	Study design	Intervention	Pterygomaxillary disjunction (PMD)	Distractor	Activation time	Number of patients	Mean age	Sex (M/F)	Malocclusion	Measuring method	Timepoints
Aras et al. (2010)	prospective cohort	SARME - TPD (disjunction of zygomaticoalveolar crest, anterior surface of the maxillary sinus, and anterior nasal spine, respectively, in lateral, anterior, and median osteotomies)	no	Transpalatal Distractor, SurgiTec NV (Bruges, Belgium)	1 mm/day (7 - 10 days)	11	27.3	5/6	maxillary transverse deficiency and partial/near total nasal obstruction	CT	T1 (baseline) T2 (6.7 ± 2.3 months after surgical intervention, at expander removal) T3 (12 - 15 months after expander removal)
Aras et al. (2017)	retrospective cohort	SARME - TPD (horizontal osteotomies from the piriform aperture to the pterygomaxillary suture, additional vertical midline osteotomy between the upper central incisors)	no	Transpalatal Distractor, SurgiTec NV (Bruges, Belgium)	1 mm/day (7 - 10 days)	16	27.4	9/7	posterior crossbite	lateral cephalometric radiographs	T1 (baseline) T2 (after expansion - before any further ortho treatment)
Asscherickx et al. (2016)	prospective cohort	SARME (standard corticotomies of the anterior, lateral, and median bony supports of the maxilla and midpalatal suture separation)	no	Transpalatal Distractor, SurgiTec NV (Bruges, Belgium)	1 mm/3 days (8 - 22 days)	21	26.5	6/15	maxillary transverse deficiency	study casts, posteroanterior or cephalograms	T1 (baseline) T2 (end of expansion) T3 (10 weeks after T2)
Barone et al. (2020)	prospective cohort	SARME (LeFort I and intermaxillary suture osteotomy, separation of the midline and a nasal septum osteotomy)	no	RPE® expander (KLS Martin, Tuttlingen, Germany)	1 mm/day	12	NA	NA	maxillary mandibular transverse discrepancy > 5 mm	virtual study models from dental casts	T1 (baseline) T2 (1 year post-operatively)
Dowgied et al. (2018)	retrospective cohort	SARME (Le Fort I, through the posterior maxillary surface, the zygomatic alveolar crest, anterior wall of the maxillary sinus and edge of the piriform aperture)	yes	Titamed Smile Distractor	approx. 0.6 mm/day	78	16.86	NA	maxillary narrowing with a deficit of the transverse dimension > 4 mm	CBCT, lateral cephalograms	T1 (baseline) T2 (3 months post distraction)
Haas Junior et al. (2022)	prospective cohort	SARME (four minimally invasive osteotomies, one subspinal, one vertical midline extended to the nasal floor and two horizontal lateral osteotomies)	no	MARPE expander with four bicortical miniscrews	2 turns/day until appearance of an interincisal diastema, then 1 turn/day until required expansion	11	38.89	3/8	established diagnosis of transverse maxillary deficiency	superimposed CBCT images	T1 (baseline) T2 (after expansion - before any further ortho treatment)
Hansen et al. (2007)	prospective cohort	SARME (bilateral osteotomy of the maxillary sinus, pre-formation of the premaxilla above the central incisors)	yes	Dresden distractor	0.96 mm/day (7 days)	12	25.3	NA	serious transverse maxillary constriction	CT	T1 (baseline) T2 (post expansion)
Huizinga et al. (2018)	retrospective cohort	SARME (corticotomies of all four bony supports of the maxilla)	yes	TPD (Classic or All-in-one, Surgi-Tec, Sint-Denijs-Westrem, Belgium)	0.33 - 0.66 mm/day	20	24.5	12/8	transversal maxillary hypoplasia	CBCT	T1 (baseline) T2 (post expansion)
Koudstaal et al. (2009)	RCT	SARME (LeFort I)	no	Transpalatal Distractor, SurgiTec NV	1 mm/day	23 (25 randomized)	33	10/1	transverse maxillary hypoplasia	lateral and PA cephalograms, casts	T1 (baseline) T2 (post expansion) T3 (12 months)

				(Bruges, Belgium or RPE® expander (KLS Martin, Tuttlingen, Germany)							after treatment)
Kunz et al. (2016)	retrospective cohort	SARME (subtotal Le Fort I)	yes (partial separation of pterygoid process)	Transpalatal Distractor, SurgiTec NV (Bruges, Belgium or RPE® expander (KLS Martin, Tuttlingen, Germany)	0.66 mm/day (2 - 3 weeks)	16	26.5	6-10	pronounced transverse deficit of the maxilla combined with uni- or bilateral posterior crossbite	3D models dental casts	T1 (baseline) T2 (5.6 ± 3.5 months post distraction)
Landes et al.(2009a)	retrospective and prospective cohort	SARME (Tripartite or bipartite osteotomies)	yes/no	MWD (Normed, Tuttlingen, Germany) or TPD (Surgi-Tec, Bruges, Belgium)	0.5 - 0.6 mm/day	8 (bipartite) 11 (tripartite)	NA	NA	transverse maxillary compression, dental crowding, lack of adequate dentoalveolar basis	3D-CT scans	T1 (baseline) T2 (post expansion)
Landes et al.(2009b)	retrospective and prospective cohort	SARME (Tripartite or bipartite osteotomies)	yes/no	MWD (Normed, Tuttlingen, Germany) or TPD (Surgi-Tec, Bruges, Belgium)	0.5 - 0.6 mm/day	24 (50)	NA	NA	transverse maxillary compression, dental crowding, lack of adequate dentoalveolar basis	3D-CT scans	T1 (baseline) T2 (post expansion)
Laudemann et al. (2009)	retrospective and prospective cohort	SARME (LeFort I, tripartite or bipartite osteotomies)	yes/no	MWD (Normed, Tuttlingen, Germany) or TPD (Surgi-Tec, Bruges, Belgium)	0.5 - 0.6 mm/day	24	NA	NA	transverse maxillary compression, dental crowding, or lack of dentoalveolar basis	3D-CT scans	T1 (baseline) T2 (4 - 26 weeks post expansion)
Laudemann et al. (2010)	retrospective cohort	SARME (LeFort I, tripartite or bipartite osteotomies)	yes/no	MWD (Normed, Tuttlingen, Germany) or TPD (Surgi-Tec, Bruges, Belgium)	0.5 - 0.6 mm/day	18	NA	NA	insufficient dentoalveolar basis and a transverse maxillomandibular deficit of > 5 mm	3D scanned cast models	T1 (baseline) T2 (20.5 ± 1.34 months post-expansion)
Laudemann et al. (2011)	retrospective and prospective cohort	SARME (LeFort I, tripartite or bipartite osteotomies)	yes/no	MWD (Normed, Tuttlingen, Germany) or TPD (Surgi-Tec, Bruges, Belgium)	0.5 - 0.6 mm/day	25	NA	NA	transverse maxillary deficiency, dental crowding or lack of dentoalveolar basis	3D-CT scans	T1 (baseline) T2 (2.87 ± 1.59 months post-expansion)
Matteini et al. (2001)	prospective cohort	SARME (standard osteotomies)	yes	TPD	0.33 mm/day	20	20	8/12	transverse maxillary deficiency (lateroposterior crossbite)	Models	T1 (before surgery) T2 (post expansion, 2 - 3 weeks later)
Nada et al. (2012)	prospective cohort	SARME (LeFort I, additional midline osteotomy)	yes	TPD (Surgi-Tec, Bruges, Belgium)	1 mm/day	17	29.4	NA	skeletal transverse maxillary deficiency combined with another skeletal discrepancy that required orthognathic surgical intervention	3D CBCT models	T1 (baseline), T2 (22 ± 7 months after completion of pre-surgical orthodontic treatment and prior to second orthognathic intervention)
Nada et al. (2013)	prospective cohort	SARME (LeFort I, additional midline osteotomy)	yes	TPD (Surgi-Tec, Bruges, Belgium)	1 mm/day	15	30	7/8	developmental deformity, absence of more than four teeth in the posterior maxillary arch, and lips not being in rest position during the CBCT scan	3D CBCT models	T1 (baseline) T2 (22 ± 7 months after completion of pre-surgical orthodontic treatment)
Nikolaev et al. (2017)	retrospective cohort	SARME	NA	NA	NA	21	NA	NA	NA	CBCT	T1 (baseline) T2 (day of the expander removal)
Parhiz et al. (2011)	retrospective cohort	SARME (Mid-palatal osteotomy with Le Fort I osteotomy and nasal disjunction)	yes	TPD (SurgiTec, Bruges, Belgium)	0.33 mm/day	50	26	20/30	transverse maxillary deficiency	posteroanterior (PA) and lateral cephalograms, panoramic and periapical radiographs, intraoral and extraoral photographs, study models	T1 (baseline) T2 (20 ± 9 months)

Petrick et al. (2011)	prospective cohort	SARME (lateral osteotomy)	no	Dresden Distractor (DD; ITU, Dresden, Germany)	1 mm/day (8 days)	16	24.5	7/9	transverse maxillary deficiency	CT	T1 (baseline) T2 (on average 7.01 months after SARME)
Pinto et al. (2001)	prospective cohort	SARME (osteotomies)	no	TPD (Surgi-Tec, Bruges, Belgium)	0.33 mm/day	20	21.5	9/11	NA	Digital photographs of the models (dental casts)	T1 (baseline) T2 (end of expansion)
Ploder et al. (2021)	retrospective cohort	SARME (corticotomies of the anterior, lateral and medial bony supports of the maxilla)	yes	TPD (Surgi-Tec, Bruges, Belgium) or OMI appliance (Micro-4 Hyrax appliance (MICRO4), Tiger Dental, Bregenz, Austria)	TPD: 1 mm/day (12.6 ± 5.8 days) OMI: 0.51 mm/day (12.5 ± 1.3 days)	12 (TPD) 13 (OMI)	24.8 OMI: 36.1	: 5/7 OMI: : 4/9	transverse maxillary deficiency (dental crossbite, crowding, constricted maxillary arch, maxillary width discrepancy > 5 mm)	Cast models Panoramic radiographs	T1 (before surgery, 1-7 days) T2 (after consolidation period, 8-10 weeks) T3 (1 year after surgery, range 10-14 months)
Seeberger et al. (2015)	prospective cohort	SARME (LeFort I, including osteotomy of the pterygoid process)	yes	Titamed Uni-Smile Distractor (Wervik, Belgium)	0.5 mm/day	19	22	8/11	transverse maxillary deficiency	CBCT	T1 (1 month before) T2 (3 months after surgery)
Tausche et al. (2007)	prospective cohort	SARME (bilateral osteotomy of the lateral maxillary sinus walls)	no	DD - Dresden Distractor	over-compensation of 0.5-1 mm (8-10 days)	17	28.8	6/11	severely constricted upper jaw in conjunction with an Angle Class II, Class III or open bite malocclusion	CT	T1 (before) T2 (6 months after insertion of DD)
Wallner et al. (2022)	retrospective cohort	SARME (Le Fort I, midline osteotomy)	yes	Titamed SMILE 3-distractor (Kontich, Belgium)	0.5 mm/day (0.25 mm twice a day) for 14 days	91	20	33/8	transverse maxillary deficiency (loss of at least 5 mm) with closed intermaxillary suture	superimposed CBCT images	T1 (baseline) T2 (approx. 1 year postoperatively)
Xi et al. (2017)	retrospective cohort	SARME (Le Fort I, nasal osteotomies, additional midline osteotomy)	yes (only in cases of asymmetric mobility)	TPD (UNI-Smile distractor, Titamed, Kontich, Belgium)	1 mm/day (consolidation period of 8 - 10 weeks)	78 with hyrax group	30.2	22/6	transversal maxillary hypoplasia and mandibular hypoplasia	3D cephalometric reference frame from CBCT	T1 (baseline) T2 (20.3 ± 6.2 months)
Zandi et al. (2014)	RCT	SARME (osteotomy of the lateral maxillary wall from the piriform rim to the pterygomaxillary junction, midline osteotomy between the central incisors, and pterygomaxillary disjunction, not including the releasing of the nasal septum)	yes	TPD (SurgiTec, Bruges, Belgium)	0.5 - 0.6 mm/day up to an overexpansion of 2 - 3 mm	15	19.4	5/10	transverse maxillary deficiency	CBCT	T1 (before operation) T2 (immediately after consolidation period)

CBCT: cone beam computed tomography; CT: computed tomography; NA: not available; PA: posteroanterior; RCT: randomized controlled trial

**Table 2.** Outcomes of studies included in the qualitative synthesis.

Trial ID	Outcomes	N	Mean <sub>0</sub>	SD <sub>0</sub>	Mean <sub>1</sub>	SD <sub>1</sub>	MD	SD
Aras et al. (2010)	<i>Maxillary canine area</i>	11
