The U samples correspond to the untreated controls. The different APH treatments are: A, 450 MPa at 22 °C; B, 450 MPa at 50 °C; C, 600 MPa at 22 °C; and D, 600 MPa at 50 °C. The numbers indicate the storage time (days). Chao 1 is an abundance-based estimator of species richness. The Shannon and Simpson indices are estimators of both species richness and evenness, with more emphasis on richness (Shannon) or evenness (Simpson).
