Figure S1. POD activity determined in tissue and culture medium of *A. rusticana* (A and B) and *N. tabacum* HR (C and D). HRCs of 15 d of growth on MS medium and then were treated with 1 ppm (1000 ng/mL) of a mixture of emerging pollutants (SMX, TMP, OFL and EE2). Light and dark grey columns indicate untreated and treated HR cultures with the emerging pollutants, respectively.

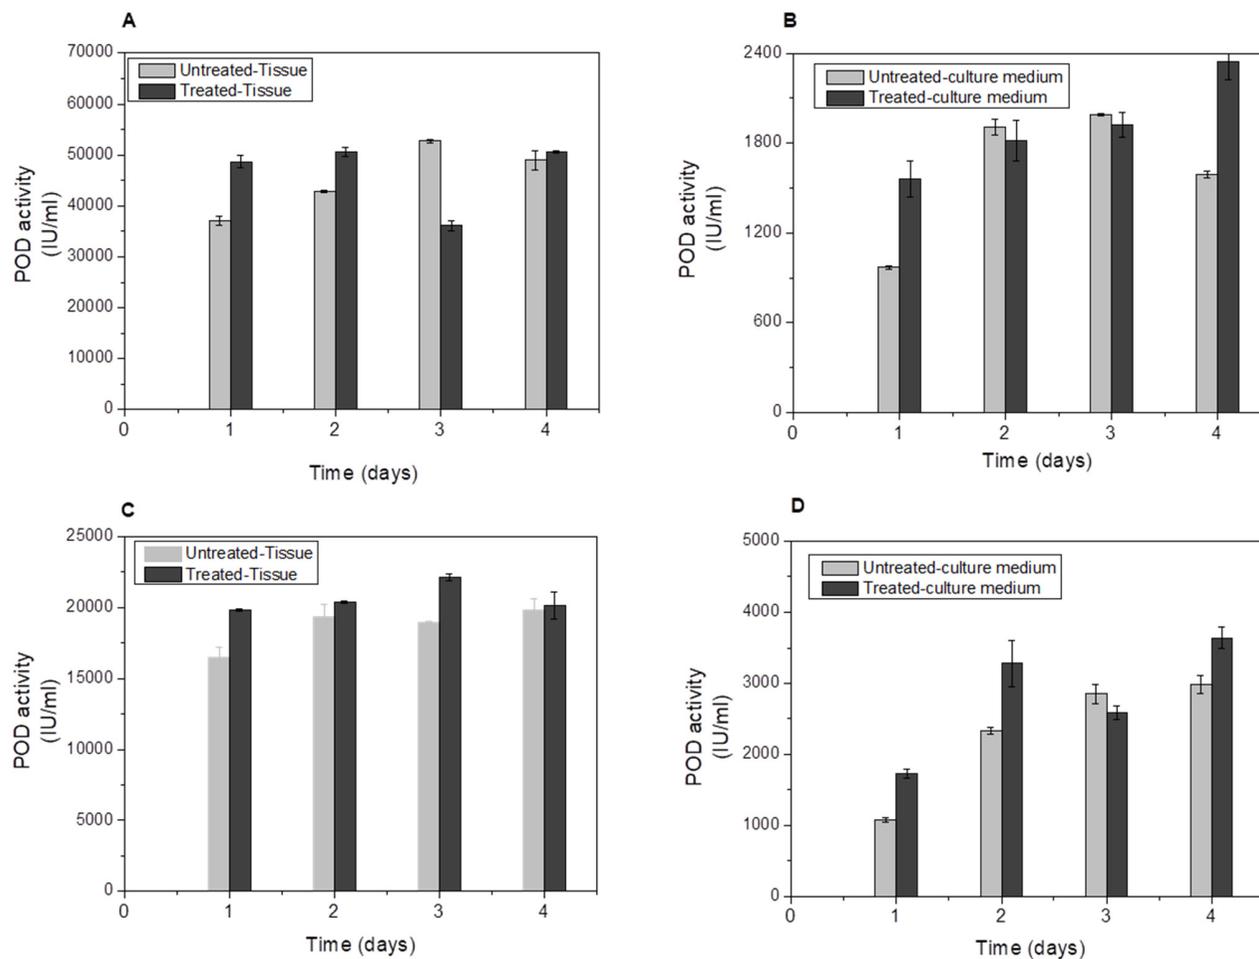

Figure S2. Transformation products detected in the culture medium of *T. asperellum* (A, B, C and D) after 4 d of SMX, TMP, OFL and EE2 treatment (1 ppm).
