## Summary

This supplement is divided into 4 sections, including 7 tables and 3 figures. It provides additional data on the following: (1) soil classification, X-ray powder diffraction (XRD), and Pearson correlation matrix for the soil samples (2) Degree of contamination (3) Solid-phase partitioning, labile mobile fraction % and water-soluble relations with the exchangeable phase, labile phase, and total contents of Pb and Zn in the SPs (4) PHREEQC analysis and batch leaching results

### 1. Soil classification, X-ray powder diffraction (XRD), and Pearson correlation matrix for the soil samples

**Table S1.** A brief description of the type of soil samples collected: Particle size distribution into clay, silt, and sand according to the United States Department of Agriculture for the size groups of mineral particles (USDA, 1987) [1].

Sample	Location	Type of Soil	Clay % (< 2 μm)	Silt % (2–50 μm)	Sand % (> 50 μm)
S1	Community ground in Kasanda	Sandy loam	2.51	47.9	49.6
S2	Makululu primary school	Loam	8	47.8	44.2
S3	Malumbo community ground	Silt loam	1.38	51.2	47.5
S4	Makululu day secondary	Silt loam	0.86	53.4	45.7
S5	Makululu day secondary garden	Sandy loam	0.42	37.2	62.3
S6	David Ramushu secondary school	Sandy loam	0	39.0	61.0
S7	David Ramushu secondary school garden	Sandy loam	0	43.8	56.2
S8	Kebar Christian academy	Silt loam	0.04	55.9	44.1

**Figure S1.** XRD patterns showing the major minerals found in the SPs.

**Table S2.** Pearson correlation matrix for chemical composition for the SPs. Marked correlation is significant at  $p < 0.05$ .
