**Table S1.** Results of the Kolmogorov-Smirnov tests used to test for differences in the distribution of interception, throughfall and stemflow between paired crop types and for all crop data combined. Tests were only performed when observation sample sizes were large enough per group to develop a probability density function (see Figure 2 in the manuscript). \* p≤0.05, \*\* p≤0.01, \*\*\* p≤0.001.

**Table S2.** Alphabetized literature values of relative canopy interception ( $P_i$ ), stemflow ( $P_s$ ), and throughfall ( $P_T$ ). Location (latitude/longitude), climate (mean annual precipitation and temperature: MAP and MAT), UN-FAO crop type, and experimental conditions (R = natural rainfall, S = simulated rainfall, I = sprinkler-irrigation) also provided. Blank where data was unavailable.
