

Supplementary Table S1: Detailed composition of the pre-starter and starter feed.

| Ingredient                 | Pre-Starter | Starter |
|----------------------------|-------------|---------|
| Wheat                      | 40.0 %      | 40.0 %  |
| Soy                        | 29.2 %      | 31.2 %  |
| Corn                       | 24.8 %      | 23.8 %  |
| Sunflower seed oil         | 2.0 %       | 1.0 %   |
| Premix <sup>§</sup>        | 4.0 %       | 4.0 %   |
| Test material <sup>#</sup> | 0.1 %       | 0.1 %   |

<sup>§</sup> Szőlőfürt Szövetkezet 4% Premix

<sup>#</sup> Added “on-top” of the feed in case of group A, B and C.

Supplementary Table S2: Nutritional parameters of the pre-starter and starter feed.

| Name              | Prestarter | Starter   | Unit |
|-------------------|------------|-----------|------|
| Dry material      | 88.29      | 88.17     | %    |

p= 0 \*\*\*; 0.001 \*\*; 0.01 \*

Supplementary Figure S1: Significant differences in the effect on measurable weight gain after infection. For body weight, we found significant differences between the positive control group and the group treated with test material B ( $p=0.0224$ ) and between the positive control group and the group treated with enrofloxacin ( $p=0.0276$ ) only immediately after infection.

Supplementary Table S4: Effect of treatments on body weight on day 7 by statistical analysis compared to positive control group.

| Positive control             | Estimate | Standard Error | t value | Pr (> t ) |     |
|------------------------------|----------|----------------|---------|-----------|-----|
| <b>(Intercept)</b>           | 80.6877  | 1.7834         | 45.244  | < 2e-16   | *** |
