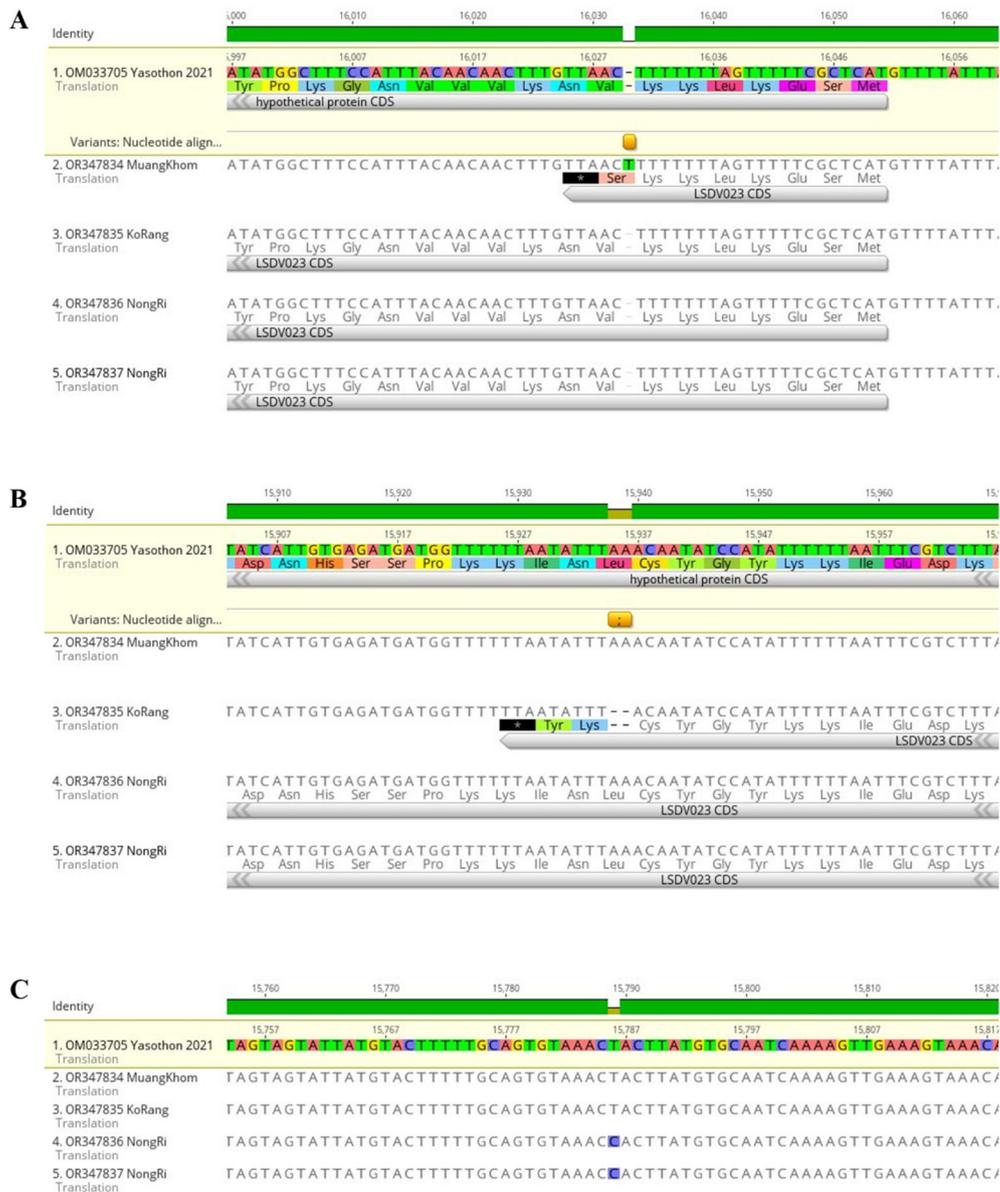

Figure S1: Nucleotide alignments of each LSDV strain compared to Yasothon/2021. A) LSDV 138156/64/Lopburi/2021 strain had a T insertion mutation at nucleotide position 16,030 causing 64 amino acids deletion from 73 to 9 amino acids in ORF023 encoding hypothetical protein. B) LSDV 65A01032 Lopburi/2022 strain had two A deletions mutation at nucleotide position 15,935-15,936 causing amino acid change from Leu Asn Ile to Lys Tyr and deletion 32 amino acids from 73 to 41 amino acids in ORF023. C) LSDV 65A09027 and 65A09679 Lopburi/2022 strains had a transition mutation from T to C at nucleotide position 15,786 causing no amino acid change in untranslated region between ORF022 and ORF023.
