

Figure S1. Representative images of EPF *Beauveria pseudobassiana* colonization on pupae and cocoon of *Lobesia botrana*. In the first row, images of a pupa subjected to the control treatment are shown. The lower row shows images of a pupa infected through *B. pseudobassiana* formulation treatment in the urban sector. The hyphae that penetrated the cutide of the pupa are stained with lactophenol blue. Figure obtained from Altimira et al. [87].
