Supplementary Figure S7. LASTZ alignment of the mitochondrial genome sequences of *Rhodotorula babjevae* CBS 7808 and DBVPG 8058. The alignment was performed with the sequences after circularization. The consensus sequence is represented as a black bar. The identity bar represents pairs as green for 100% mean pairwise identity, green-brown for at least 30% and under 100%, and red for below 30%. In the bar representation of each sequence, pairs with 100% mean pairwise identity are gray and the gaps are represented either as a horizontal line in the contig that lacks the sequence or as a black bar in the contig that contains the sequence. Within the LASTZ alignment diagram, unique forward alignments are shown in blue and unique backward alignments are shown in red.
