

Supplementary Materials

Table S1. Contribution (r^2) of nursery, variety and treatment to variation in chlorophyll in graft unions. Annotation next to the numbers indicates significance level: ** < 0.01, n.s. = not significant (>0.05).

Factor	Graft Unions (r^2)
Nursery	0.089 **
Variety	0.028 n.s.
Treatment	0.000 n.s.
Full model	0.13 n.s.

Table S2. Indicator species for control and HWT plants in **(a)** graft union and **(b)** root collars for all OTUs. Graft unions and root collars were analyzed separately by variety and rootstock, respectively. Correlation values (stat) and the statistical significance of the correlation (p-values) are reported. GTD-related indicator species are marked with a cross (†) and biocontrol species are marked with an asterisk (*).
