Table S1. Synergy test of *B. pilosa* extract/Peptide combinations against *C. albicans* SC5314.

Strain	Phenotype	Extract	Peptide	MIC _E	MIC _P	E	P	FIC Index	MIC _E /E	MIC _P /P
<i>C. albicans</i> SC5314	S	8.12	R-1-R	1000	100	250	25	0,50	4	4
			[³ A]-R-1-R	1000	100	62,5	50	0,56	16	2
			[² A]-R-1-R	1000	>200	62,5	50	0,31	16	4
			RR-1-R	1000	100	62,5	25	0,31	16	4
			[⁵ Bpa]-R-1-R	1000	>200	62,5	50	0,31	16	4

MIC_E and MIC_P correspond to the MIC (μg/mL) of the extract of *B. pilosa* and peptides derived from R-1-R, respectively; E and P correspond to the MIC values when combining the extract and peptide. Minimum fractional concentration index (FIC I), MIC_E/E, and MIC_P/P represent the factor by which the extract or peptide are potentiated after being evaluated in combination, respectively.

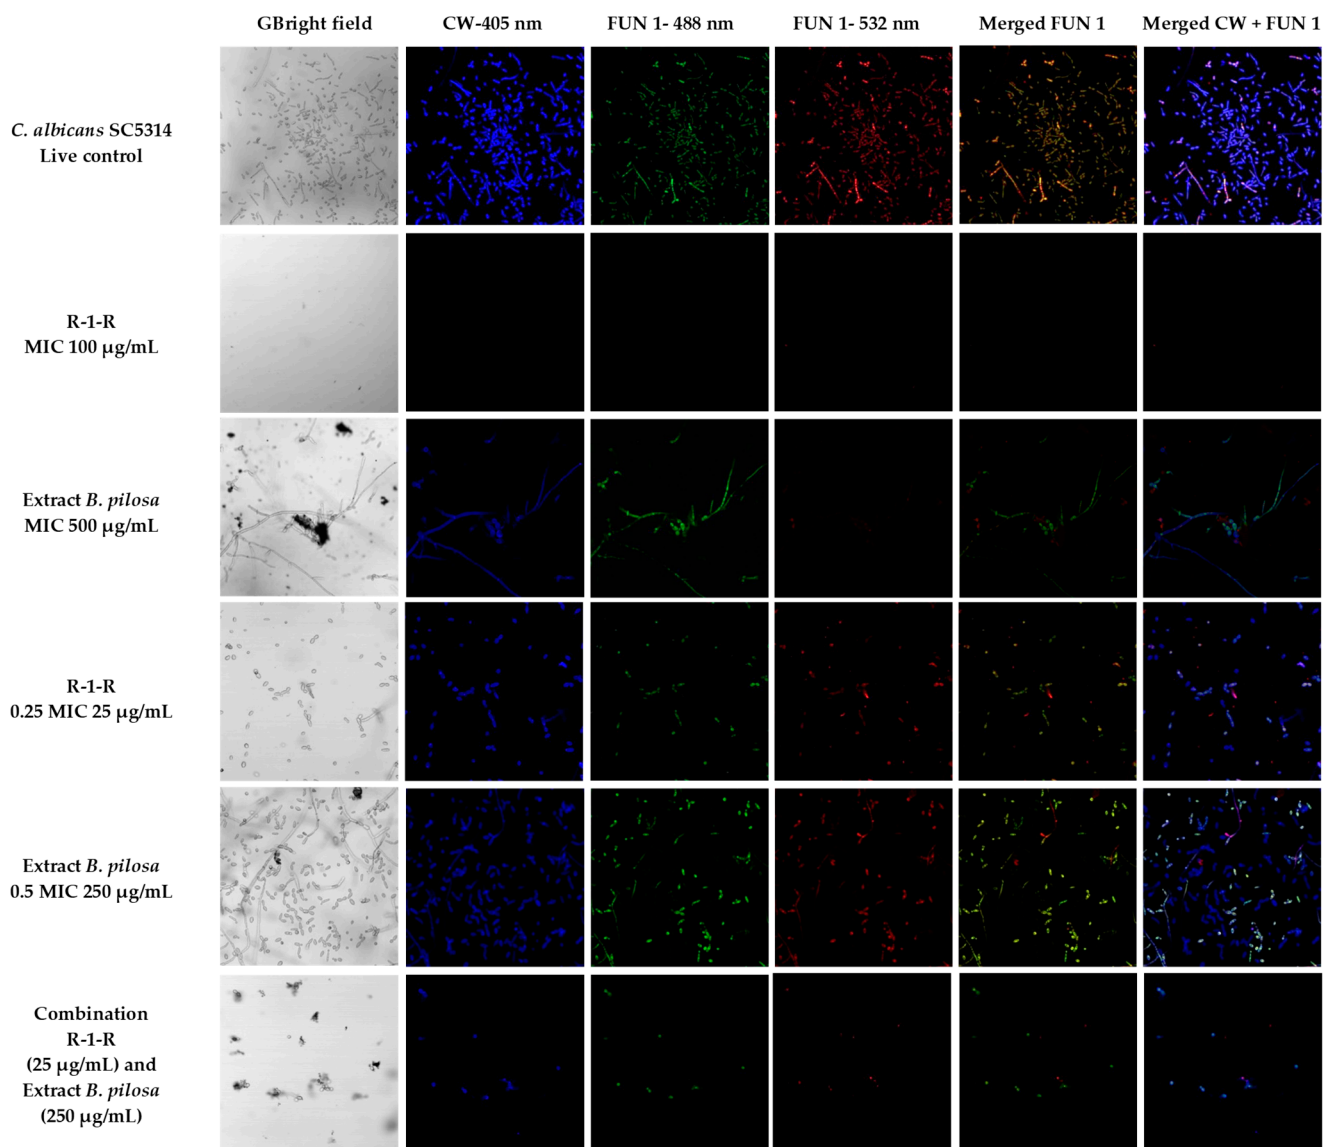

Figure S12. Cell viability assay of *C. albicans* SC5314 after treatment (48 h) with R-1-R, *B. pilosa* extract to MIC value, sub MIC values and combinations of peptide and extract where there was a synergistic effect.

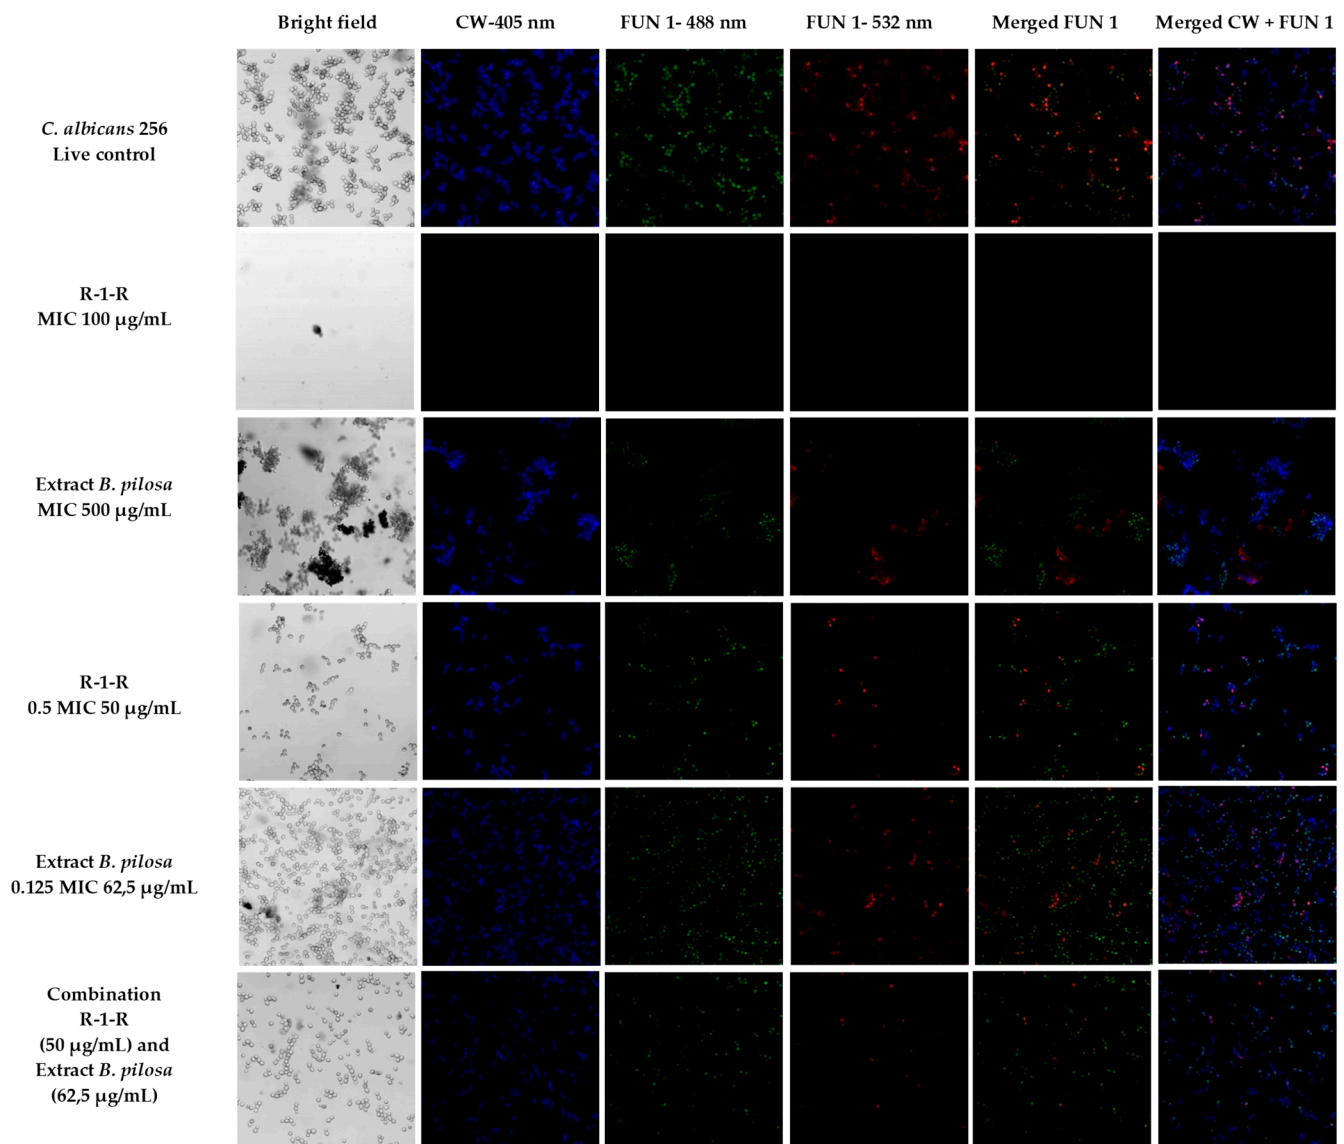

Figure S13. Cell viability assay of *C. albicans* 256 after treatment (48 h) with R-1-R, *B. pilosa* extract to MIC value, sub MIC values and combinations of peptide and extract where there was an additive effect.

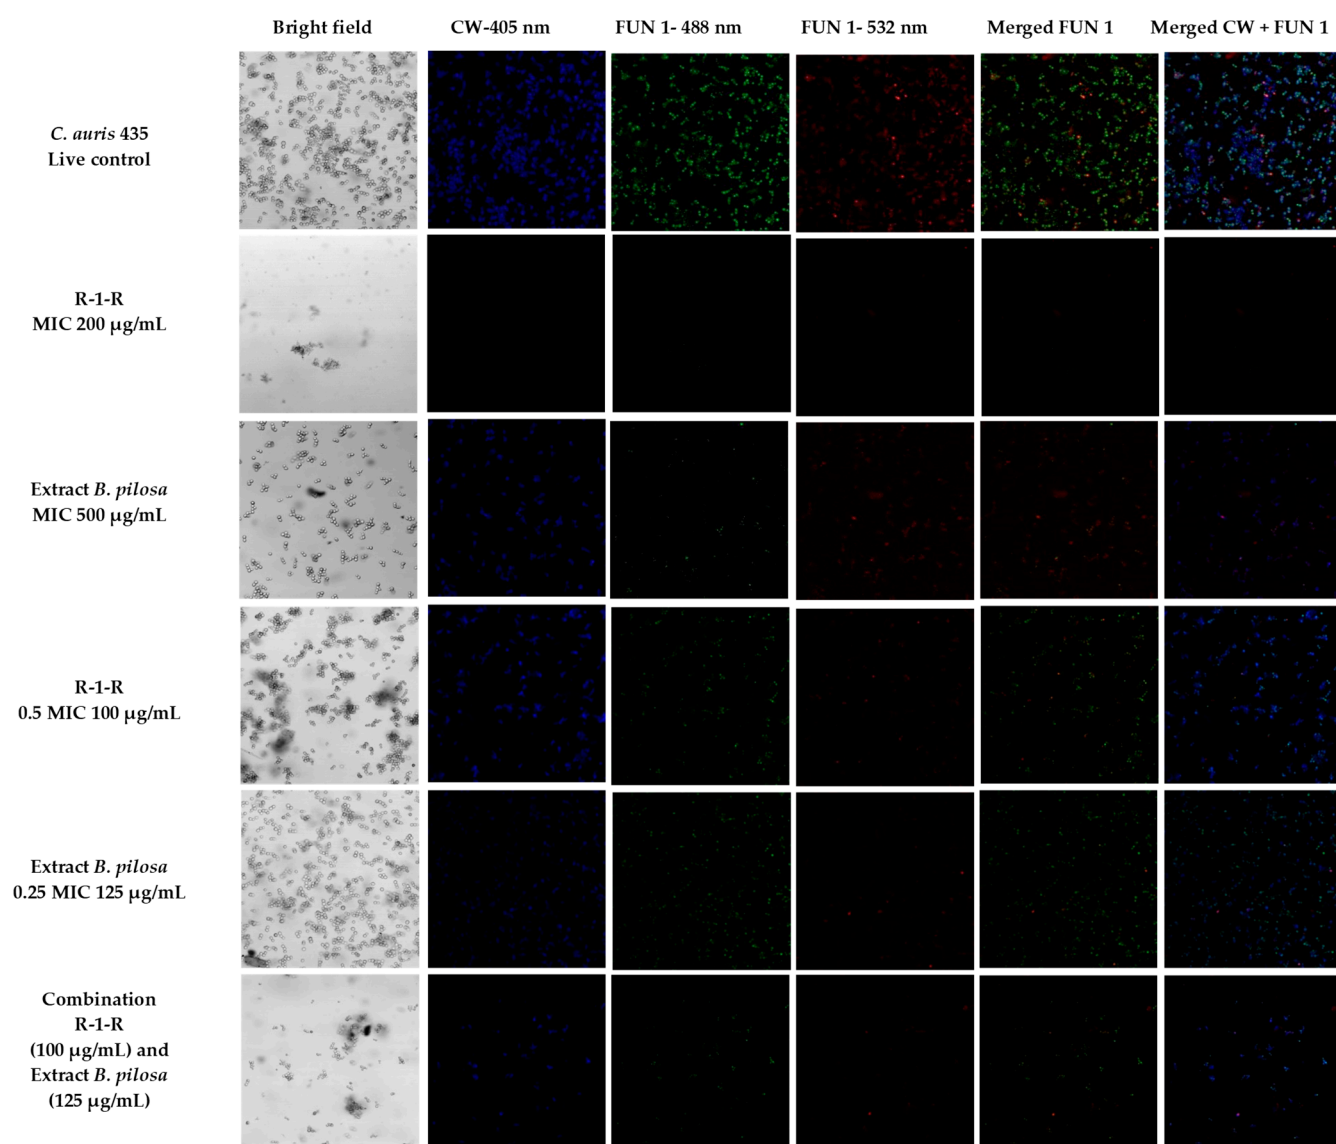

Figure S14. Cell viability assay of *C. auris* 435 after treatment (48 h) with R-1-R, *B. pilosa* extract to MIC value, sub MIC values and combinations of peptide and extract where there was a synergistic effect.

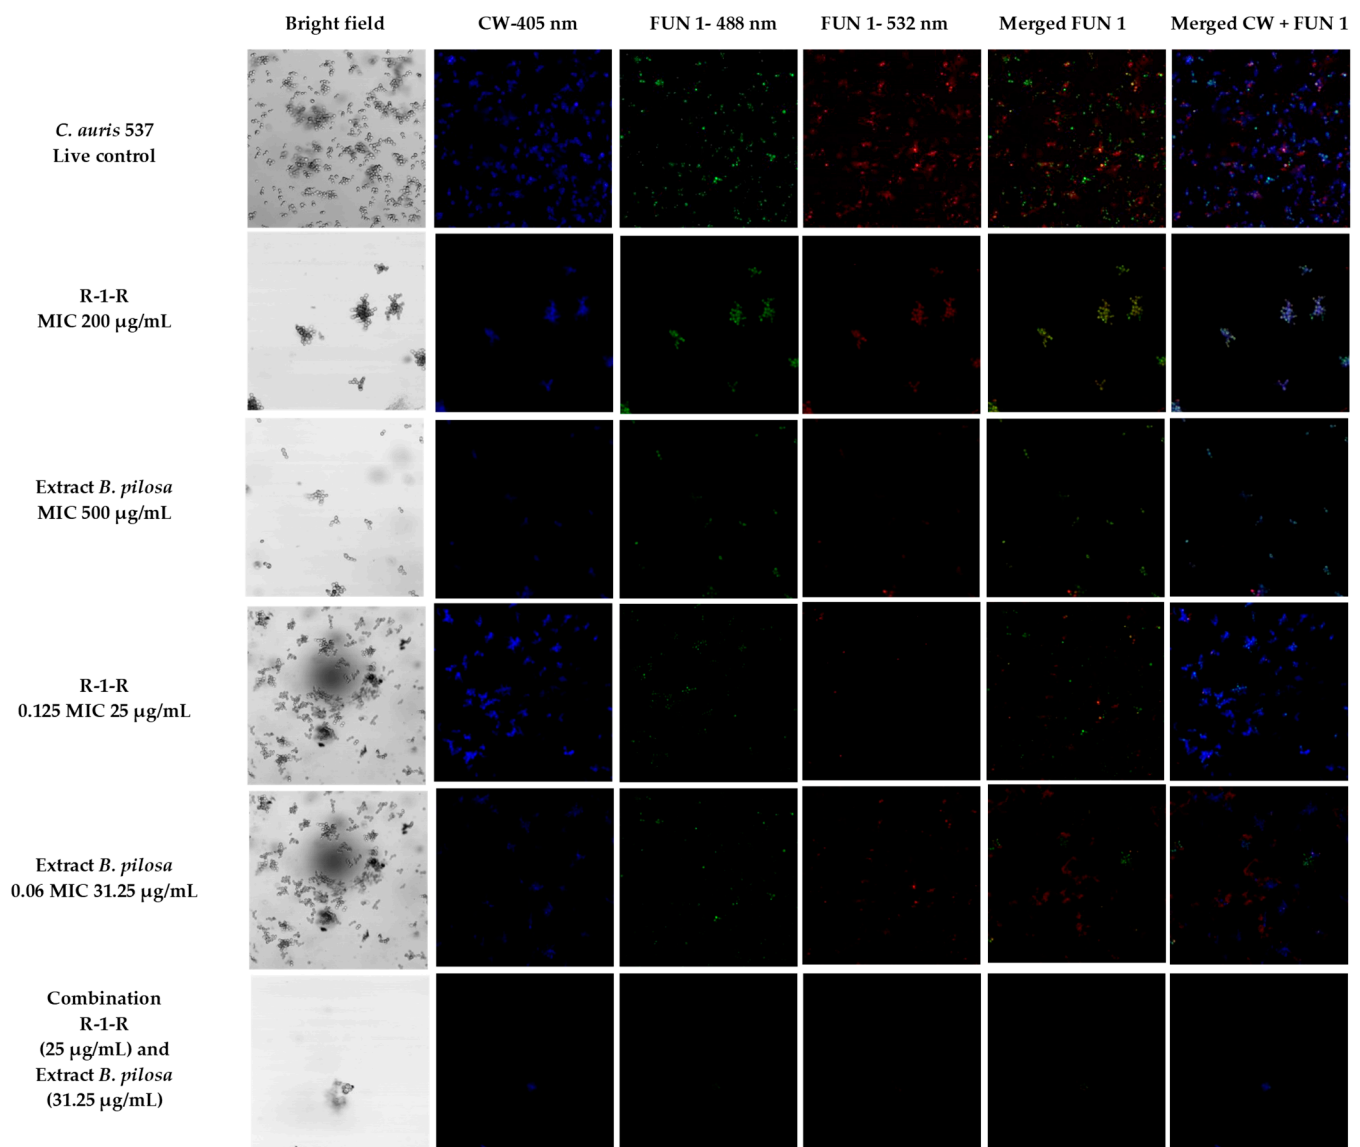

Figure S15. Cell viability assay of *C. auris* 537 after treatment (48 h) with R-1-R, *B. pilosa* extract to MIC value, sub MIC values and combinations of peptide and extract where there was a synergistic effect.
