

Supplementary Materials: Synthesis, Spectroscopic Characterization and Photoactivity of Zr(IV) Phthalocyanines Functionalized with Aminobenzoic Acids and Their GO-Based Composites

Leili Tahershamsi, Yuriy Gerasymchuk, Anna Wedzynska, Maciej Ptak, Iryna Tretyakova and Anna Lukowiak

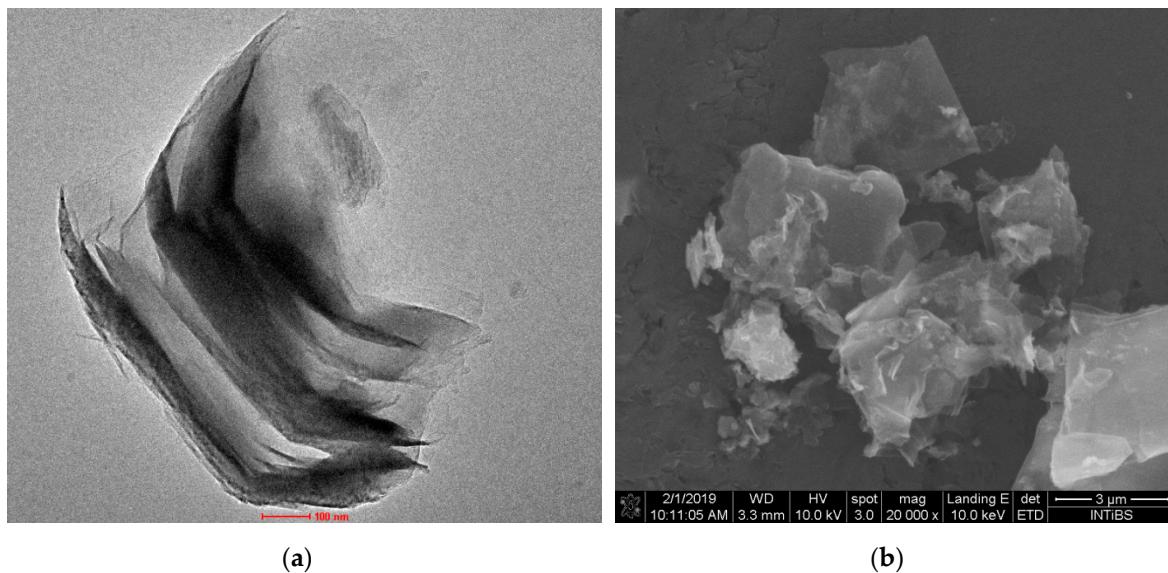

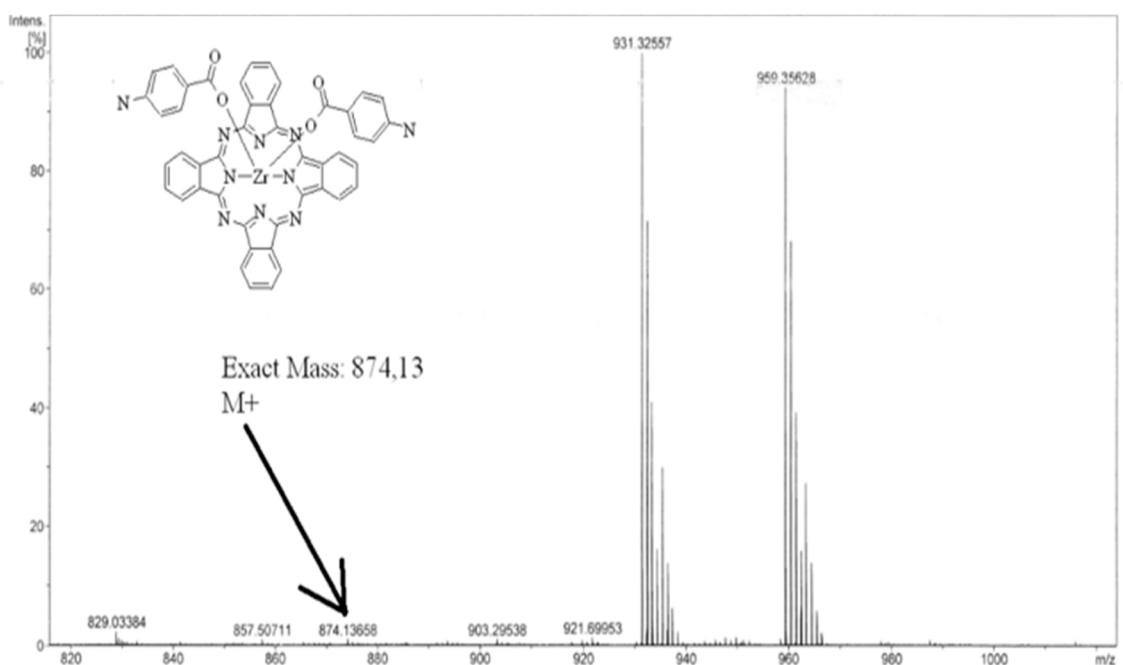

Figure S1. (a) TEM and (b) SEM images of graphite oxide flakes with zirconium(IV) phthalocyanine derivatives. Because the concentration of Pc complexes is very low in the composites, these methods are not informative for characterization of composites (ZrPcs are not seen in the images nor detected by EDS analysis).

Table S1. IR wavenumbers (cm^{-1}) and relative intensities of observed bands together with proposed assignment for the studied complexes and composites.^a

bis(PABA)ZrPc	bis(PABA)ZrPc/GO	bis(DABA)ZrPc	bis(DABA)ZrPc/GO	Assignment
